

Billet Dual Caliper Brackets

79-04 Mustang with SN95 Axles, Base/GT brakes

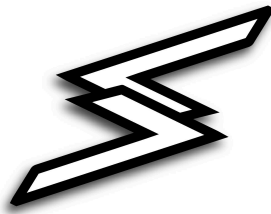

Whats Included:

1. (2x) Billet Dual Caliper Brackets

NOTES:

- These cannot be used with C clip eliminators.
- This kit does not include the second caliper mounting bolts. If you do not have those, you will need (4x) M12x1.75 x 35mm long bolts for those.

Disassembly:

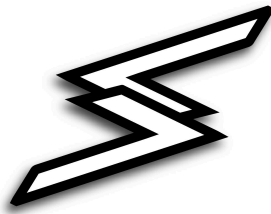

1. Put the rear of the car on jackstands with both sides off of the ground. Make sure the parking brake is off.
2. Remove the rear wheels.
3. Disconnect the parking brake cables from the calipers.
4. Unbolt the rear caliper mounts and hang the calipers with a bungee or hanger.
5. Remove the rotors.
6. Remove the differential cover and drain the differential.
7. Remove the differential cross pin retaining bolt.
8. Remove the cross pin.
9. Push the axles in toward the center of the differential to expose the c clips and remove them.
10. Slide the axles out of the axle tube carefully and set aside.
11. Unbolt the factory caliper brackets from the axle tube and remove.

Installation preparation:

1. It is recommended, but not necessary, to replace the axle seals while you have the rear axle this far apart.
2. Also, now would be a good time to get the differential welded if that is something you were going to get done!

Installation:

1. Install the Billet dual caliper brackets onto the axle using the factory hardware. The cutout should be facing outward.
2. Install the axle shafts back into the axle housing and reinstall the c clips.
3. Install the cross pin and cross pin retaining bolt.
4. Install the differential cover and refill the differential.

- 5.** Install the rotors.
- 6.** Install the factory calipers onto the rearward caliper mount and reconnect the parking brake.
- 7.** Install the handbrake calipers on the forward caliper mount, make sure the calipers have the bleeder facing upward.
- 8.** Finish your install with a Scotidi Handbrake and Handbrake Lines.
- 9.** Reinstall the rear wheels and lower the car back to the ground.
- 10.** SEND IT!
