12. http://o-8.livejournal.com/2003/04/30/ To my knowledge, this post is the very first public display of any Skullgirls character, with Filia's first concepts dating some months after. Some

months later, you drew more pictures of Peacock with a new design, and commented on the old design with "i think i like making peacock like this, than the previous design w/ the ugly patterns and shite". As all the pictures from your old website have since been purged, no one has seen Peacock's oldest design. Care to share/comment on it?

13. Why was Peacock's design changed around so much? Did you originally have different plans for her?

15. Do the Black Egret officers with the trenchcoats and military captain caps still exist in the current canon, or were they entirely replaced with the current Egret design (olive green suits and picklehaubes)?

16. Would you consider putting more of your early 2003-2005 sketches into the art gallery? It's cool seeing the humble beginnings of such awesome characters.

17. When Leviathan was Squigly's father's parasite, did he reside in him internally or externally?

[redacted]

19. Can Cerebella actually turn rock into diamond just with the strength of Vice Versa, or is that just a, "gameplay," feat, and not really her true-to-lore power?

20. Valentine can be seen doing things that a normal human would never survive (skin ripping off, etc). Does she have some form of actual super powers or modifications, or is that attributed to, "ninja skills?"

21. Can artificial parasites be unattached? Without any side effects?

22. I'm also wondering what Eliza was up to before becoming a "celebrity" in New

Meridian...that "20 years" answer just opened up another can of questions. But I have a gut feeling her Story Mode will cover that. Hopefully.

36. If it's not too spoilery, could you tell us what happened to both Leduc and Hive? Were they in some sort of horrible accident? Are they also war victims, like Peacock? Or did they volunteer to become experiments?

37. How does training routines work for the Black Egrets? Are their days usually the same or differ?

47. Are the members of the ASG Labs on the lam from the law of the Canopy Kingdom, or are they quietly acknowledged and left alone by the government and police?

48. On the official website, it states that King Renoir sought to "decommission" the ASG Labs experiments after the end of the Grand War. Does that imply that he wished to destroy them, shed them of their augmentations, or merely force them to renounce their title as Skullgirl-fighting agents?

50. Are the Black Egrets a sprawling military, an elite squad of hand-picked soldiers, or a sort of secret police?

51. Do the Black Egrets still have those huge Metal Slug-esque tanks that were in lots of SG's concept art, or have they downsized?

[redacted]

53. Are Tom and Stanley rivals, since they shared history and Tom betrayed the lab that they formerly worked together in?

54. Do those little kids hanging out with Ileum in the background of Lab 8/Under the Bridge have names?

62. Does being the Skullgirl change your personality much? Is Marie very different now from how she used to be?

63. Also, this one's small, but does Skullgirl-ification change your hair color along with the eyes and skull decor? (I've noticed some people think Marie's hair was brown before she became the Skullgirl due to the lighting in a certain scene in Double's storymode, but I'm not sure whether it's me or those people who are in the wrong.)

64. How did Minette and Ms. Fortune meet? Did it take much for them to become friends?

65. How is Leviathan able to stay alive when his host is dead? Is it necessary for Parasites to have food and sleep like other organisms?
