David Carter

Full Stack Developer

Email: *d.carter.software@gmail.com*
Phone: *+4740039874*
Location: Trondheim, *Norway (Relocating to Oslo July)*

Skills

claude code, agentic ai, typescript, js, nodejs, react, react-query, redux, redux-saga, webpack, github actions, jenkins, cypress, jest, enzyme, docker, semver, agile, express, nextjs, restify, socketio, websocket, mongodb, postgres, noSql, lerna, zod, storybook, convox, AWS, python, openAI, fast ai...more

Experience

Schibsted AS / Senior Frontend Engineer

Apr 2021 - June 2025, Oslo

Part of the shared services team in Schibsted's news organisation. Our main responsibility is a rich text editor CMS tool used daily by all of Schibsted and partner's journalists. When I joined the team there was a hiring spike to migrate a frontend which was written in backbone.js 10+ years ago to react. Since then we have also built extension architecture to allow consumers of the CMS to contribute via integrations & API, we have integrated AI capabilities into our journalists workflow and many other exciting projects.

***Tech**: typescript, react, react-query, redux, redux-saga, docker, nodejs, cypress, jest, express, zod, swagger, lerna, storybook, Github actions, convox, AWS, jenkins*

PlaceSpace AS / CTO/Co-Founder

Oct 2020 - Feb 2021, Oslo

Full stack developer of property leasing platform. A solo side project which then turned into a pre-seed funded journey. I personally strategised, designed and built the UX, web- app and infrastructure. Unfortunately COVID-19 did not help the trajectory, but we took part in Oslo's TheFactory incubator.

***Tech**: react, redux, redux-saga, docker, nodejs AWS, ci/cd, webpack, typescript, restify, mongoose, socket.io*

Höegh AS / Frontend Engineer

Apr 2019 - Sept 2020, Oslo

Höegh AS have long been a major player in the RoRo shipping industry, but with a changing market and modern technology becoming more influential, they needed to change. A small crack force team was formed; designers, developers, system admins. The goal was to reduce infra costs, increase work efficiency, and drive more business. I played a lead role in roadmapping the migration to cloud infra, updating/maintaining of business services, and implementation of new services with a distributed team of on-location, remote and consultants. After 6 months I was given added responsibilities, which entailed being scrum-master on core projects and tech lead on new projects.

***Tech**: React, Redux, ES6, Selectors, Sagas, Enzyme, Docker, Node.js, AWS, Gitlab CI/CD, Webpack, Flow, TypeScript*

SuperCarers / Frontend Engineer

Sept 2018 - Apr 2019, London

SuperCarers series A funded startup based in London's tech hub, Silicon Roundabout. SuperCarers provide an introductory service for carers and those in need of care, allowing them to connect safely and efficiently. A team of around 40, comprising tech, sales, and services. My role included frontend development around APIs'. The application was large and required high level development skills to tackle every problem. Testing was essential and we used a combination of (integration, unit, typing) tests to lessen bugs and ensure smooth stable releases.

Tech: *React, Redux, Selectors, Sagas, Enzyme, Selenium, Node.js, Styled Components, Webpack, Flow, Typescript, Docker, Jenkins, AWS, Gherkin*

Mobile 5 / Web Developer

July 2017 - Aug 2018, London

Mobile 5 is a global web agency based in London's West End, and provides web solutions for innovative ideas. Their client list includes Renault, Sky, Canon, Greggs. It is an in-house agency with a large team of developers working together to execute design and brief objectives. Standards are high, and best practices are enforced with code reviews. Knowledge sharing is vast in this fast paced environment. While working at Mobile 5, I worked on an extensive number of React/Redux and a few Angular web apps.

Tech: *React, Redux, ES6, AWS, Selectors, Sagas, Thunk, d3.js, Jest, Node.js, BEM, Webpack, Babel, Eslint, Stylelint, Buddy, Jenkins, Angular, js*

Shift.ms / Frontend Developer

May 2015 - Jan 2017, London

Shift.ms is a social network for people with multiple sclerosis, with a growing 11000 members. It is a vast WordPress site, and they hired me to lead the frontend for their 4th rebuild. The rebuild was needed in order to scale and lay the foundations for further feature add-ons. After a successful 3 month SCRUM managed rebuild, a series of additional projects were delivered: Thought Sort - a CBT tool, MS Reporters - a citizen journalism video platform, and finally MS Stories - an interactive storytelling platform.

Tech: *HTML5, CSS3, Sass, jQuery, WordPress, PHP, Grunt, JavaScript, Angular React(In work Training)*

Education

University of Hertfordshire / Screen Cultures BA

Sept 2012 - May 2015, London

Upper second-class honors

Final major project: A Backbone.js timeline of computing history app
Tech: *HTML5, CSS3, JavaScript, Backbone, Require, Node.js*

Awards

Tech 4 Good / Digital Health

Sept 2016, London

Nominee
