A B S T R A C T

An abstract is written along 100-250 words with a single space. Abstract content must explain the subject matter discussed in the article, the method used, the results or findings and conclusions. Abstracts are written in only one paragraph.

1. INTRODUCTION (*Georgia, bold, 11 pt)*

The manuscript consists of several sections, namely the Introduction, Method of Application, Results, Achievement of Targets, Conclusion, Acknowledgments, and Bibliography. Except in the Acknowledgments section, the manuscript may not include the author's identity or affiliation.

The introduction has a background, problem formulation, activity objectives, and literature review. In this section, the writer must provide a quantitative description of the target audience involved in community service activities. In addition, conditions and potential areas relevant to these activities must also be explained in detail. The problem to be solved must also be formulated clearly and concretely, and the activity's objectives must be explained in detail.

This introductory section also contains a literature review that forms the basis of the concept of community service. The literature review must come from primary sources such as journal articles and the latest conference proceedings published within the last ten years. The literature review must include theory and empirical evidence. The author may also include examples of dedication from other parties in this section. This article is the result of dedication that applies research results, both the results of their research and those of other researchers.

2. METHOD (*Georgia, bold, 11 pt)*

In the Application Methods section, the author is asked to explain clearly and briefly the methods used to achieve goals in community service activities. In addition, the results of community service activities must be measurable, and the authors were asked

Vol. 1 No. 1 April 2023, Hal xx-xx ISSN : xxxx-xxxx (print) / eISSN : xxxx-xxxx (online)

to explain the measuring instruments used descriptively and qualitatively. Furthermore, the authors are expected to be able to explain how to measure the level of success of these community service activities. Changes in attitudes, social culture, and the economy of the target community can measure the level of success.

3. RESULTS AND DISCUSSION (*Georgia, bold, 11 pt)*

Community service is an effort to disseminate science, technology, and art to the community to provide added value in economic activities, policies, and changes in social behavior. In this section, the author is expected to describe how community service activities are carried out to achieve the goals set. The author must explain the indicators of success and benchmarks used to show the level of success of community service activities and reveal the advantages and disadvantages of the main focus of the activity or the outputs produced. In addition, the author must also explain the difficulty in carrying out activities and production of goods, as well as opportunities for future development. Articles can be strengthened with relevant documentation related to services or goods as outputs or the main focus of activities, such as pictures of the implementation or implementation process, pictures of product prototypes, tables, and graphs.

Tables and Figures (Georgia, bold, 10 pt)

Tables and figures are part of the manuscript. They cannot be separated from the body of the manuscript—place tables and figures where appropriate to the narrative so they complete the narrative. Tables and figures are numbered sequentially based on the order in which they appear in the text. Tables and figures must be given a title. The title of the table and figure follows these numbers. The table display can be seen in Table 1.

Tabel 1. Table Title

Images included in the manuscript must be of good quality. Images do not stand alone and must form a relevant part of the text. Please note that the images are not documentation unrelated to the discussion of the manuscript. Ensure the manuscript does not display images that show the identity or affiliation of the authors.

The printed version of the journal is printed in black and white. The author should adjust the image to suit these conditions. Examples of image placement and naming are shown in Figure 1, Figure 2, and an example of displaying a diagram in Figure 3.

4. CONCLUSION

The conclusion must indicate the results, strengths and weaknesses, and possible further development. Conclusions can be in paragraphs, preferably as points using numbering or bullets.

BIBLIOGRAPHY

To meet the quality standards of articles worthy of publication, editors require authors to use primary references (journals) with at least 80% of the total references in the Bibliography. In addition, authors are required to use the latest references published in the last 5-10 years. This article does not use footnotes in the text, and all reference sources must follow the rules for writing citations and Bibliography. The format of citations in the manuscript and display of the **Bibliography uses the American Physicological Association (APA)**. For more details, authors can study their writing in the APA Format Citation Guide or follow the writing guidelines' instructions.

Citation in the text (in-text citation) must follow what is listed in the Bibliography. This quote is followed by or ends the sentence or phrase quoted from the source. In citing manuscripts, include the last name of the author followed by the year of publication of the cited article.
