

Sharing Kaltura Videos in your Blackboard Original Course

We are now using the most up-to-date Kaltura integration for Blackboard. For courses from 2022 on, you will now see a rainbow burst icon (the Kaltura logo) next to the video's title in your course content, which students can click to view the video. Kaltura videos embedded in an item should still play directly in your course content, as before.

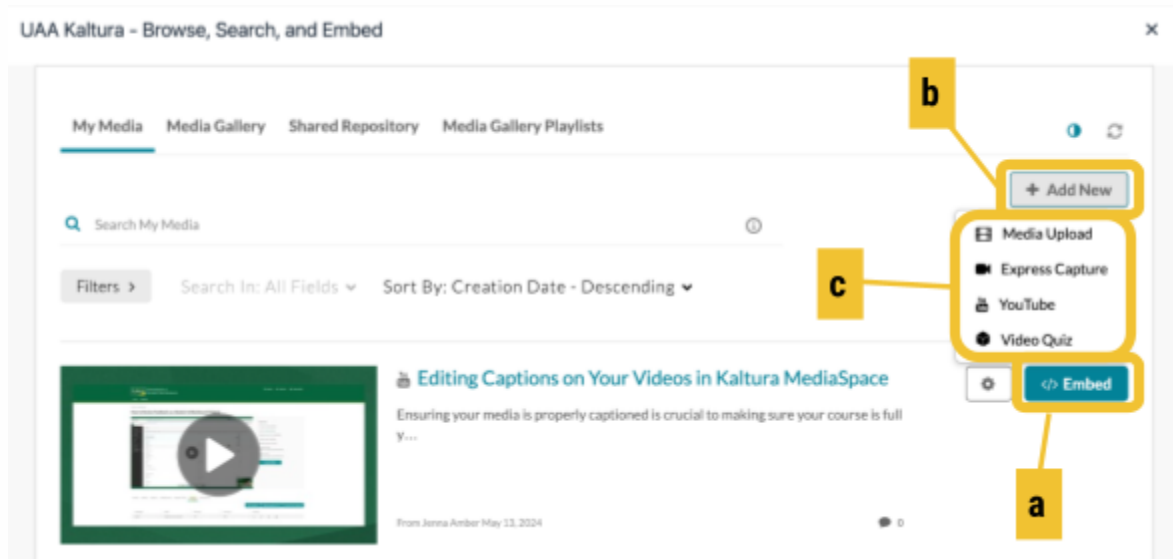

To copy a course with Kaltura content from 2022 or earlier, you will need to [Export/Import](#) into the new course rather than using the Copy tool. Importing will automatically convert all old Kaltura video links and embeds to the new integration tool. If you use Kaltura Quizzes or the Kaltura Course Media Gallery tool, you will need to re-embed those to ensure they're integrated properly.

Embedding Kaltura Videos in a Content Area

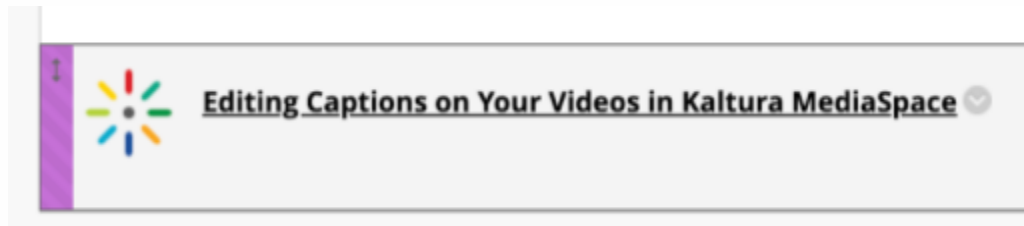

1. Navigate to your Blackboard course and open the content area where you want to post the video. (Videos can be added in any content area/folder/learning module).
2. Select Build Content, then select UAA Kaltura - Browse, Search, and Embed. (If you're associated with KPC, you'll select KPC Kaltura - Browse, Search, and Embed)

3. To add a video that is already in your My Media content, find the video you want to add and click `</>` Embed (a). You can also add a new video here by going to Add New (b) and uploading your own media, recording in your browser with Kaltura Express Capture, adding a YouTube video, or creating a video quiz (c).

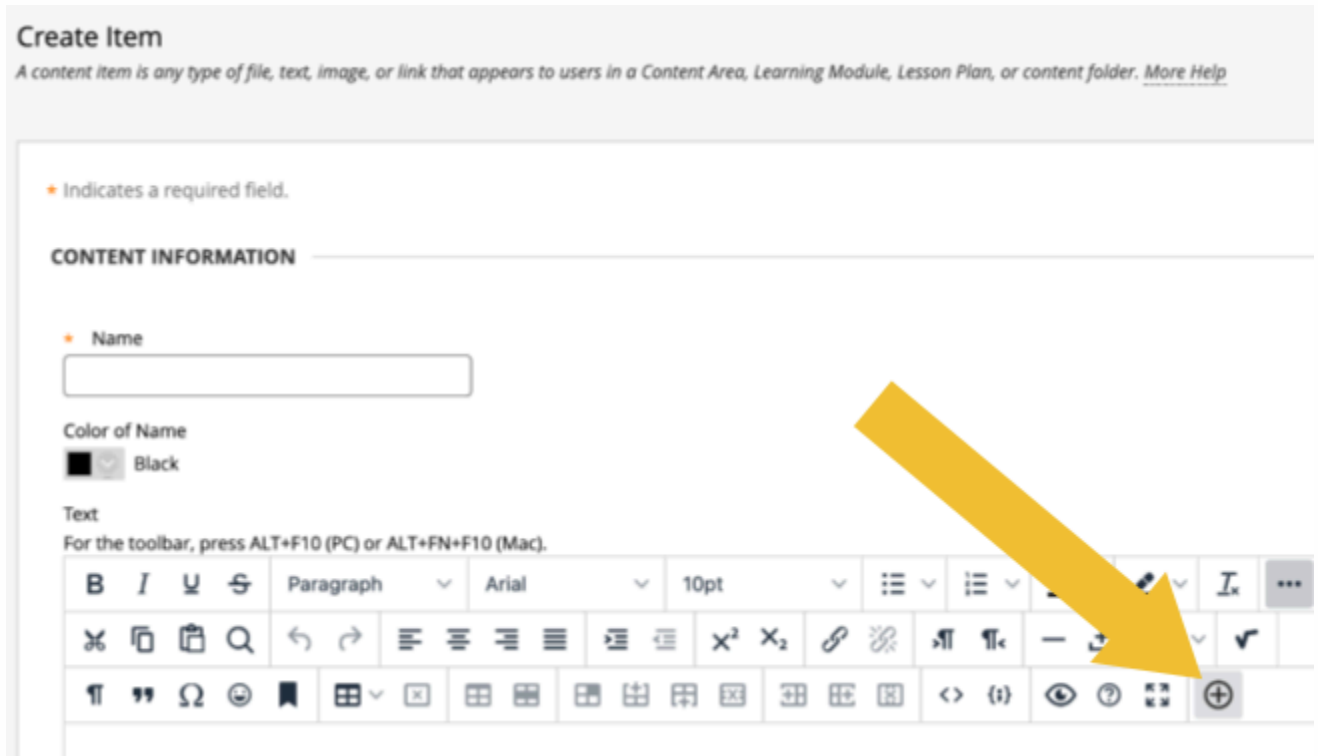

4. You'll see the video or quiz you've embedded in your content as a rainbow burst icon (the Kaltura logo) next to the video's title in your course, which students can click to view the video.

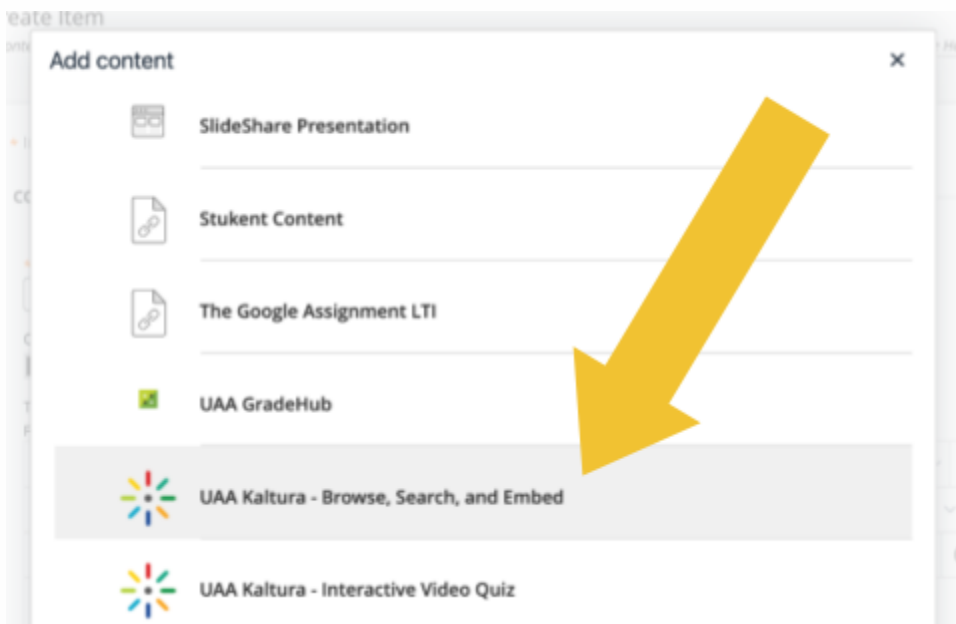

Embedding Kaltura Videos in an Item

To embed a video from Kaltura My Media that's playable directly in your Blackboard Original course:

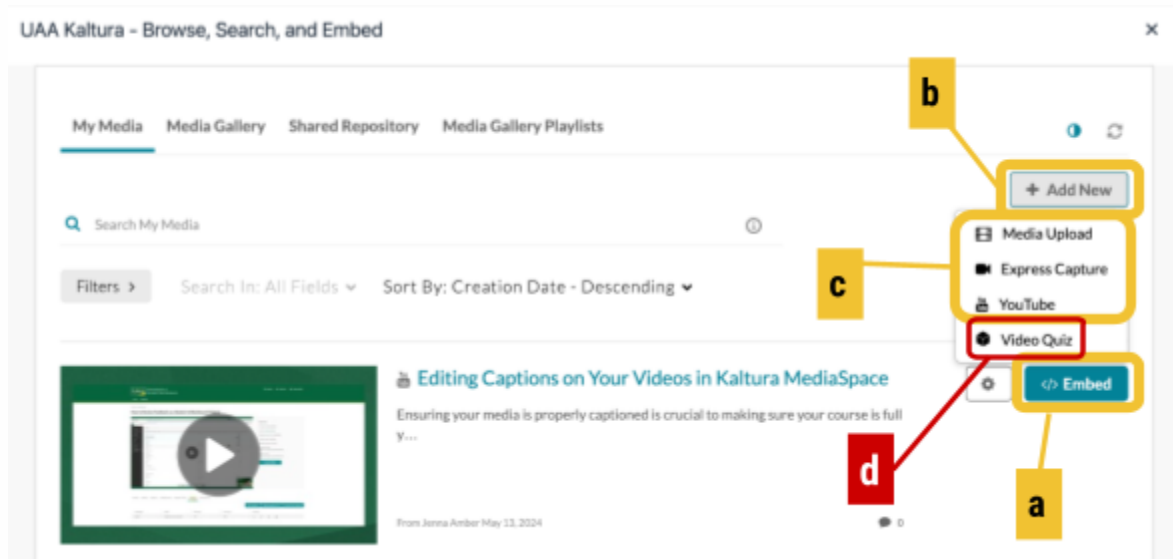

1. Create an item that contains a Text Editor (i.e. Item, Discussion, Assignment), then use the plus sign icon on the Text Editor toolbar to Add content.

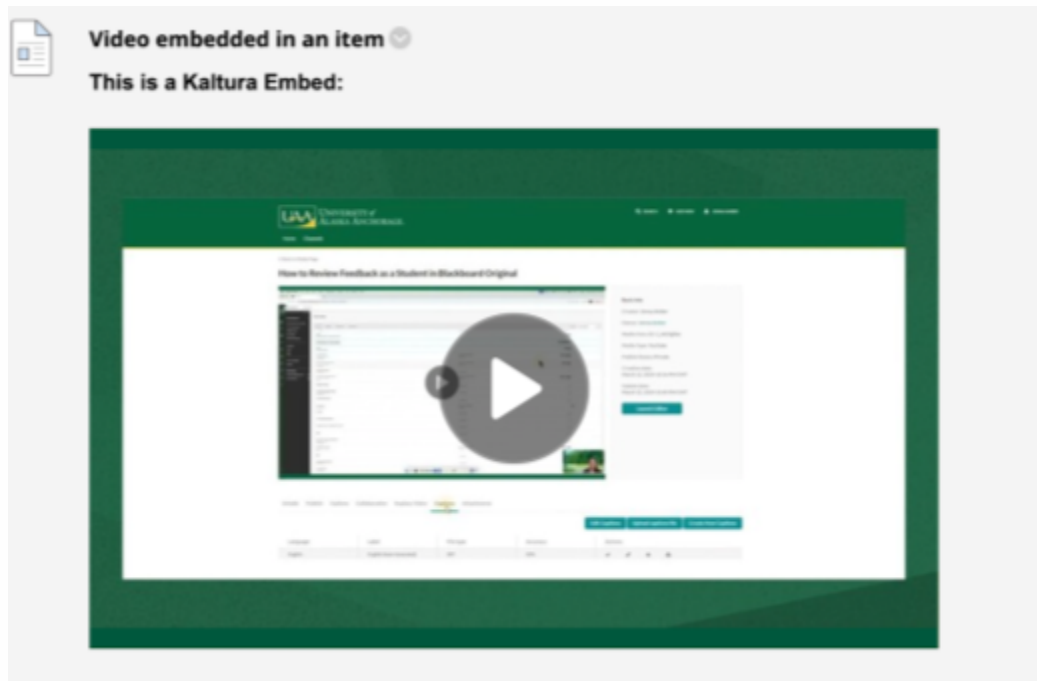

2. Scroll down to select UAA Kaltura - Browse, Search and Embed. (If you're associated with KPC, you'll select KPC Kaltura - Browse, Search, and Embed).

3. To add a video that is already in your My Media content, find the video you want to add and click `</>` Embed (a). You can also add a new video here by going to Add New (b) and uploading your own media, recording in your browser with Kaltura Express Capture, or adding a YouTube video (c). Note: It is not recommended to add a video quiz (d) with this method, as it will not connect to the gradebook.

4. Once you Save the item, you'll see the video as playable directly in your course content area.

Note: You can embed a video before the automatic captions are completed and/or edited. Updated captions will show everywhere your video is embedded.
