Position: Backend Developer

About us:

Akvelon Inc (USA) works in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in the United States and other countries (**Microsoft, Facebook, Airbnb, Dropbox, Pinterest,** and many others). This is a great opportunity to transfer experience and experience with leading engineers of world-renowned companies.

We are looking for a **Backend Developer** for a project in the **Advertisement Platform** team.

A bit about project:

American social news aggregation, content rating, and discussion website. Also called "The front page of the internet," it brings over 430 million people together each month through their common interests, inviting them to share, vote, comment, and create across thousands of communities.

We're evolving and continuing our mission to bring community, belonging, and empowerment to everyone in the world. Providing a delightful and relevant experience to our users applies to our Ads like all of our offerings, and we're excited to build a product that is best-in-class for our users and advertisers. The year ahead is a busy one - join us!

- Design, build and improve scalable data processing pipelines and data analytics services for various customer facing targeting products.
- Develop low latency targeting systems that would retrieve user/post profiles and analyze to make targeting decisions for ad serving .
- Build insight tools to better understand targeting performance.
- Build performant data stores that would be used for ML systems and ad serving.

As a member of this mission driven team, you will have lots of ownership and impact to shape our ads business to support the overall Client's mission. Technologies you might work with include:

- Languages: Go, Scala, Python
- Frameworks: Baseplate, Spark, Flink, Thrift
- Datastores: DynamoDB, Redis, Druid, Kafka, BigQuery
- Tools: Kubernetes, Airflow

If you appreciate real technical challenges and you'd like to be part of the team that transforms Clients Ads into a world class platform and a highly effective marketplace, come join us!

Responsibilities:

- Work with product managers to research, design, implement, test and deploy ads products
- Collaborate closely with the platform and data teams while building new features or new models
- Lead the processes needed to improve operational stability, including improving code quality, delivering dashboards and data visualizations
- Build extendable components that would align with the product objectives
- Support day to day project management tasks including communicating project updates, managing project timelines and overseeing project execution

Qualifications:

- 4+ years of commercial experience in backend development
- Professional with Go or very skilled with Python and willing to learn Go and use it professionally
- Experience with client APIs development

Strong plus:

- Experience with FE or willing to work with it
- Experience with JavaScript React

We offer:
- Possibilities of relocation to the USA
- Entering a professional level equivalent to world standards;
- High wages (we proceed from the wishes of the candidate and the level);
- An excellent team of high-level professionals and rich engineering culture.
- Flexible working hours.

Please send your resume / questions to our mail (career@akvelon.com). We will be glad to see you in our team!
