

My Favorite

You will be presenting ***your favorite*** math topic for 2 minutes to your class. This does **not** have to be something that you've learned in class or in school.

- What is one math "thing" that blew your hair back when you first heard it?
- What do you wish you would learn more about in math class?
- If you HAD to, what math topic would you look into with more depth?

Two minutes isn't a long time to present, it's about 2-3 slides of a presentation (if you decide to use a presentation). You're going to have to think about how you want to present this material.

- Would a quick run through with a couple of friends be helpful?
- Would diagrams be useful?
- How do you cut to the chase and show your classmates something cool about math in 2 minutes?
- Do you want to make presentation slides? Or a handout? A video? An animation? A play?
- Could you make this hands on?

These presentations will be spread out, one per day for a couple of months. You will sign up in advance and you should be ready to present on your scheduled day. By the way, this is **not** a grade in the books.
