Jackson School District
AP Computer Science Principles
Summer Assignment 2026

Below is the summer assignment for AP CSP. Please read carefully and complete before the first day of school. The most important part of the summer work is to dig around and play with the ideas of computers and programming. If you have any questions, please contact me: dkovac@jacksonsd.org.

Assignment (Counts as a test grade):

1. Go to Code.org and create an account https://studio.code.org/users/sign_up. Create an account using your school e-mail account. Make your username your first and last name. If you already have one, make sure you remember the sign in information. Once your account is created and you are signed in, scroll to the bottom of the page. You will see a box that says "Join a Section." Sign up for the summer assignment by using the code **XRGWDS**.

2. After you enter the code for the summer assignment (Express Course), the top of the page will have the option to start the express course. This course must be completed this summer. There will be videos and other presentations that are helpful, but not essential for completion of the assignment. You MUST complete all of the activities. We will use code.org as our main platform for activities/assignments this year so I would like for you to get comfortable with the website.

Good luck and have fun! Email with any questions or concerns. Enjoy the summer!
