## TESLA, THE STOCK & EV STORIES

### ***HEY ALEXA, What's Telsa's Stock Price?***

This comes from the Tesla engagement page <https://engage.tesla.com/> - which is a good resource to find out ways you can participate in the transition to green transportation.

<https://2030evactionplan.ca/>

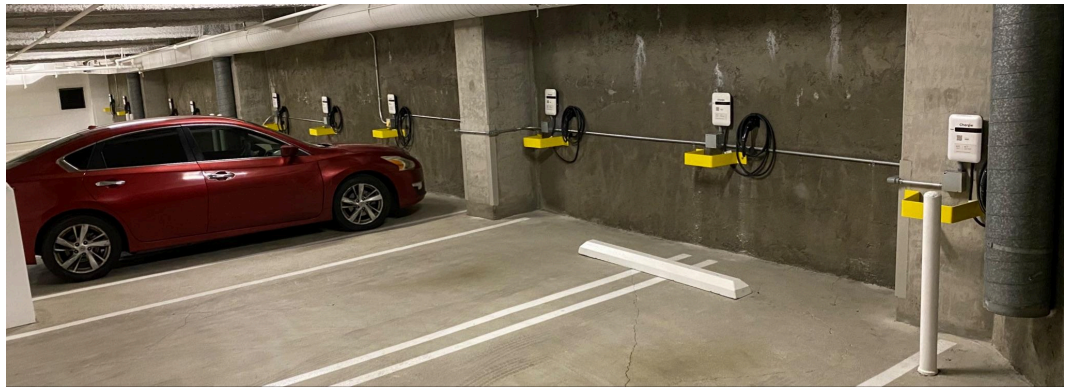

Nearly 30% of Canadians live in apartments or condos. A lack of EV charging access in these buildings creates a major barrier to EV uptake. Government should take immediate steps to make one-million parking spaces in these buildings EV ready. Achieve this goal by allocating \$1-billion over five years to make one-million existing condominium and apartment parking stalls ZEV-ready.

Who- Electric Mobility Canada a national membership-based not-for-profit organization dedicated exclusively to the advancement of e-mobility in Canada

What - EV action Plan - The 2030 EV Action Plan is an industry-led project of Electric Mobility Canada (EMC) and is intended to ensure Canada succeeds in the transition to electric mobility. The plan consists of six key pillars:

- We wanted to discuss this one pillar in particular since we have mentioned this in the past and it is a barrier to adoption and this seems like a reasonable plan of attack.

- Allocate \$1-billion over five years to make one-million existing condominium and apartment parking stalls EV-ready. Allocate \$200M/year for five years specifically for the purpose of funding 50% of electrical power upgrade and make-ready infrastructure costs in existing multi-unit residential buildings. The goal should be to bring electrical capacity to 1-million parking spaces, eliminating a major barrier to EV adoption in apartments and condos which in 2016 made up almost 30% of Canada's dwellings
- 38 million Canadians so 11 million or so in apartments - 2.2 persons per Apt. avg. and that is 5.5 million units. This could impact 20% of the apts in all of Canada.
  - **17 percent** of the US lives in apts or condos - or 58 million people
  - Assuming the same 2.2 persons per unit, it's around 29 million units (6x more folks in apartments) - So let's get busy in the US and around the world.
  - What can that look like?

- - \$6B for the US to match Canada (eg. the USS Gerald Ford Aircraft Carriers cost \$13B)

When? - Now to 2030/2040

Where? - Just a movement in Canada - not an actual policy that is being funded by Gov't

Why? - To increase the adoption of EV across the entire spectrum of population and use cases

## SPACE-X & AEROSPACE

<https://www.businessinsider.com/spacex-starlink-launches-rv-internet-service-2022-5>

Who / What / When - SpaceX [announced](#) this week that it is launching a Starlink internet service option designed with RV owners in mind.

Current prices - \$115 per month + \$25 to be able to move the dish around

Current Service Map - <https://www.starlink.com/map?source=rv>

- service will not be active while the RV is in motion and will be limited to an "as-needed basis at any destination where Starlink provides active coverage,"
- When you bring your Starlink to a new location, this prioritization may result in degraded service, particularly at times of peak usage or network congestion,
- SpaceX said it has a [userbase](#) of about 250,000 subscribers across 25 countries. The company has a network of about 2,000 satellite in Earth's lower orbit. The service is designed to deliver high-speed internet of up to 100 Mbps to 200 Mbps
