

## #AMAonline session 3B Cross curricular learning in mathematics

Kia ora koutou!

This workshop is about how our integrated curriculum works at Thames High School - through a maths department lens. We are a long established high school without a hand-picked staff or modern learning environments.

Maybe you are coming along to this workshop because your school is considering a change like this or it might already have happened.

If you have any particular questions that you would like me to address during the workshop then please write your question below, along with your name and school.

If your question has already been asked, then please add your name (and school) to it.

Hei te Rāhoroi,  
Zac

=====

Name	School	Question
Olive Jellyman	Hamilton Girls' High School	I'm wondering if there are any areas of Maths that you struggle to integrate across the curriculum and how you get around this? Thanks.
Lisa Hayes	Napier Girls' High School	How to plan for coverage of all aspects of the different subject curricula involved. I am interested in learning about a truly cross curricular learning across the junior years (y9&10) rather than contrived projects.
