

Title: Add “Print to PDF” Feature - SCLFind Issue #37

Date: 31/08/2021

Status: Under Stakeholder Review

Priority: Low

Issue: We want to add a “Print to PDF” feature that takes a user to a PDF version of a collection. There should be a button on a collection page that, when clicked, opens the PDF for that collection. The PDFs will be supplied by exports from ArchivesSpace.

Reason: We currently have a “Print View” of a collection in our current website that generates an easy to read, static HTML page of the collection. We want this to be similar so that people who want to browse an entire collection inventory or who need to use a screen reader can use this option as an alternative to navigating the Inventory and Overview tabs.

Details:

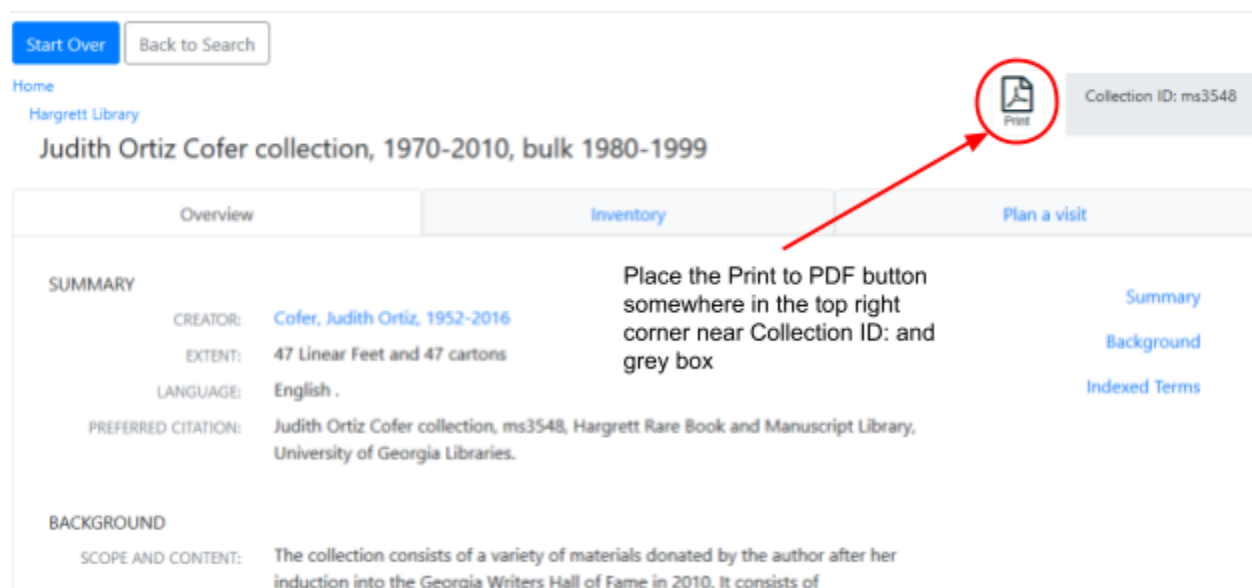

Image 37.1: A mockup of where we want the Print to PDF button to go. Having some logo and perhaps changing the color to #BA0C2F (Bulldawg red) or #E4002B (Glory Glory Glory) or any other color that stands out and follows UGA branding guidelines.

Other Info:

NOTE: this will require us to supply PDFs as well as EAD.xml files in our export workflow.
