

Project Code (e.g. AS001)

Project Title

Student Name(s)

Note: This document should not include acknowledgements or details that would indicate the identity of the school (such as the name or logo of the school), the identity of mentor(s) or research institution(s) affiliated to the project, or anything that may be construed as external endorsement.

Abstract:

The abstract is a concise summary of the report (no more than 250 words).

Project Report:

The report describes the actual laboratory, field or theoretical research (not library research) for the project. It should involve ideas generated by the student.

Students are advised not to exceed seven pages, inclusive of data in tables, figures and diagrams. The cover page (with project code, title and students name(s)), abstract, references and appendices do not count towards the seven-page limit. To ensure fairness, judges have been advised that they can ignore any part of a report that exceeds the seven-page limit.

Reports do not need to include an "Acknowledgement" section, although it is necessary to attribute and acknowledge all sources (i.e. citations). Credit must be given to the appropriate sources and references. Students must declare, within the Bibliography/References section, whether generative artificial intelligence (Generative AI) was used and how it was utilised in the authoring of the project report, beyond basic spelling and grammar checks.

Suggested Sections:

Background and Purpose of Research

Hypothesis

Experimental Methods and Results

Discussion of the Results and Implications

Conclusion

Bibliography/References, including declaration on use of Generative Artificial Intelligence.

Example statements:

I/We declare that Generative AI was/was not used in this project. OR

I/We declare that Generative AI was used in this project to... [elaborate how it was used in the project e.g. generating code.]
