

1. Open the SMART Mirror app on your iPad. It should be pushed to your iPad. If not, it is available in Self Service.

2. From the Smart Panel's Home screen, tap **Screen Share**. The SMART Mirror home screen opens.
3. In the app on your iPad, type the session ID and PIN (if displayed) in the SMART Mirror home screen.
 - The SMART Mirror home screen will display a 6-digit or 10-digit session ID. A 6-digit session ID means SMART Mirror is connected to the internet, allowing a connection across any network. A 10-digit session ID means SMART Mirror will allow local connections only. A 10-digit session ID is shown when Local connections only are enabled on the display. You can confirm this setting in the SMART Mirror Settings menu > Security > Local connections only.
When connecting using a 6-digit session ID, users can connect from anywhere. They do not need to be on the same network. To connect to a 10-digit session ID each device must be on the same network.
4. Type your name.
5. Click **Connect**.
6. If you're the first person to connect, select **Share my screen**. Your computer appears on the display's SMART Mirror home screen.
