

Transcript - Game Changer: Open Education is Changing the Rules

"We're gonna need that book, and this one too, for an assignment."

"No, I can't, it's the rule."

"Look, I need that book."

"No I can't"

"...for an assignment"

"It's the rule"

Open education, open education, open education, open education is the future of education.

It's user created content that's happening outside of traditional channels. It offers the opportunity for everybody to create and to collaborate.

Most of the majority are people who do want to learn, but they can't because they don't have the necessities.

I think the essence of education is that people want to continue to learn.

This is education that's delivered to students and individuals as they need it.

In my work, what's important is being able to meet students where they are.

Open has changed copyright, because I can now grab a course, change it, make it my own because I know what my students need.

Knowledge deserves to be free.

Ideas and activities and resources that connect where they are and where I need to take them.

Open education is changing the rules.

It's only fair.

Lots of people whose voices haven't been out there in society because they aren't able to write a book, they aren't able to get published by a publisher, begin to have a voice.

You're not just one teacher in a four walled classroom. You're one person in a network of ideas and creativity.

They can take learning out of the classroom, out of the four walls and be in the world.

And then start teaching kids in a lot more different ways like saying maybe through music or art.

Open education is the new definition of fair.

As soon as employers start recognizing certificates earned through essentially open online resources, as other schools start recognizing the work that students have done in open education resources.

It's a game-changer.

OER stands to really break down those barriers and really disrupt how people in our country, and around the world, will be learning.

It's about equity.

It's accessible to people in every country - places where people couldn't even afford the price of a pencil.

A lot of people think that open education is about more access to stuff - and it is about more access to stuff. But more importantly, it's about more access to people, more access to tools and more access to new ways to create education and to do education and to learn and that's why it's important.

Open education...

It's the new game...

Let's us create...

I am a game-changer...

I'm a game-changer.

We're all game changers now.
