

# Table ordering with QR codes

If you want to provide your customers with an even easier ordering experience when seated at one of your tables, or simply make it easier for them to find your website, then this is the guide for you.

The screenshot shows the Ordins backoffice interface. The top header is blue with a back arrow, the text "Ordin demo @ extenda", and a user icon. The left sidebar is dark grey with a "Back" button and several menu items: "Visit" (with URL https://ordindemo.ordin.online), "Stores", "Edit Organization", "Marketing Consents", "Orders", "Menu Layout", "Qr Generator", and "Sync with Extenda" (with a refresh icon). The main content area is white and features a "Sync help" section with an information icon. The help text states: "Shops in ExtendaGo/GMX will only be synced if they the following details are filled out: - Opening hours - Address - Timezone - Contry. Two stores cannot have the same 'url name'. The 'url name' is first generated from the shops name but can be updated below." Below this, there is a section for "Komoku DKK 12341234 Europe/Copenhagen" with a blue checkmark icon. It lists three options: "Adyen" (in blue, with details: (komoku\_test) DKK Account: KomokuECOM), "Eat in" (with details: Preptime: 15 mins Min spend: 0 DKK Payment optional Mon - Sun: 00:00-20:00 and URL https://ordindemo.ordin.online/menu/eat\_in/komoku), and "Pick up" (with details: Preptime: 15 mins Preorders: 0 days in advance Min spend: 100 DKK Payment optional Mon - Sun: 00:00-20:00 and URL https://ordindemo.ordin.online/menu/pick\_up/komoku).

Navigate to Ordins backoffice [here](#) and make sure that your restaurant has eat in ordering enabled. Then click on the Qr Generator in the left panel.

This will bring up a screen for generating QR codes. Qr codes can either be created for the landing page or a store menu. You can also define the specific language in which you want the website to show up with.

When selecting the eat-in option you'll be presented with the option to define a table name and table id.

If you only define the table name, this will appear on the checkout screen and on the order as a comment.

If you only define the table id, this id will be sent to Extenda/Superb when the order is placed.

We suggest that you fill out either both the table name and table id, or alternatively just the table name if you don't use the table system in Extenda/Superb.
