

General Chemistry II Exam Growth Reflection

(min of 800 words; counts as 1 Learning Journal AND it counts towards your exam grade)

I want to hear about your learning and growth process during your completion of this exam. This reflection should have eight distinct questions answered (which should be **headings** throughout your reflection):

1. When you began this exam, did you feel prepared? Why or why not?
2. What important things did you learn about your learning process during the taking of this exam? Highlight whether you think these things that you learned are strengths or growth edges in the future and whether (and how) you plan to modify them in the future.
3. What resources did you use to help you understand the material? Do you think these resources were helpful? Why or why not?
4. How did you study those resources? Do you feel like that studying process worked? Why or why not?
5. When you finished the exam, did you feel like you had learned anything? If so, what did you learn? If you didn't feel like you learned anything, do you have suggestions for questions that might have helped you improve your learning?
6. Were there any major barriers to your performance on this exam (questions that really took too much time to understand, questions that you still don't understand, questions that you felt were outside the material covered on the exam, questions that you understood but didn't know how to answer)? List those barriers here.
7. If you honestly evaluate the time, effort, and work you put into this exam as well as the growth you experienced **during this exam**, what grade (in letter grades) do you think you deserve?
8. If you honestly evaluate the time, effort, and work you put into this class so far as well as the growth you experienced **during this class**, what grade (in letter grades) do you think you deserve?
