AHEAD – Know what happens next

Privacy Policy

Last updated: October 16, 2026

AHEAD does not collect your data. There is no account, no server, and no analytics. The app has no network connection of any kind, so nothing you enter can leave your device.

1. What you enter

You can create entries in AHEAD: a title, a date, a category, how often something repeats, reminder settings, action steps and their due dates, optional notes, and the record of what you have marked as done.

All of it is stored on your device only, in the app's own storage. It is used for nothing except showing you your own entries.

2. What AHEAD does not do

AHEAD contains no networking code. It does not send your entries anywhere, does not upload them to a server, and has no cloud sync or backup of its own.

There is no account and no sign-up. AHEAD never asks for your name, email address, phone number or any other personal detail.

There are no analytics, no third-party SDKs, no advertising, no advertising identifier, and no tracking of any kind — neither across apps nor inside this one.

AHEAD does not sell, rent or share your information, because it never receives it in the first place.

3. Settings stored on your device

Alongside your entries, AHEAD stores a few preferences locally: whether reminders are switched on, the time of day reminders should arrive, your appearance choice, and whether you have completed the introduction. These stay on your device like everything else.

4. Notifications

If you allow notifications, AHEAD schedules them locally through iOS, on your device. No push server is involved and no device token is created or transmitted. The text of a notification is the title of your own entry or action step.

You can withdraw the permission at any time in iOS Settings; AHEAD stays fully usable without it.

5. Deleting your data

Delete an entry in the app and it is gone from your device. Deleting AHEAD removes the app's stored data along with it.

If you use iCloud Backup or an encrypted computer backup, a copy of the app's data may be contained in that backup. Those backups are made and controlled by Apple and your device settings, not by AHEAD.

6. Crash reports

If you have switched on "Share with App Developers" in iOS Settings under Privacy & Security → Analytics & Improvements, Apple may pass aggregated crash and performance reports to me. These come from Apple, are not requested by the app, and contain no entries you created.

7. Children

AHEAD is not directed at children and collects no personal information from anyone, including children.

8. Changes

If this policy changes, the updated version will be published at this address and the date above will change with it.
