

TRIAL RESULTS – 15th September 2021

[Imfinzi and tremelimumab with chemotherapy improved PFS by 28% and OS by 23% in 1st-line Stage IV NSCLC vs. chemotherapy](#)

Susan Galbraith, Executive Vice President, Oncology R&D, said: "The POSEIDON data offer patients further benefit from Imfinzi and are an important validation of our development strategy to explore novel combinations. Adding a short course of tremelimumab to Imfinzi for those patients already receiving chemotherapy, reduced the risk of cancer progressing or death by 28% compared to chemotherapy alone. The results also showed the significant survival improvement did not compromise tolerability in the 1st-line treatment of patients with metastatic non-small cell lung cancer. We look forward to discussing these data with regulatory authorities."

[All efficacy parameters show improvement in Ph 1/2 pilot trial of GC4419 vs. placebo, in patients with unresectable or borderline resectable locally advanced pancreatic cancer \(LAPC\) undergoing SBRT](#)

"We are very pleased with the survival and tumor outcome benefits observed in the final analysis of this proof-of-concept trial," said Mel Sorensen, M.D., President and CEO of Galera. "The improvements across multiple efficacy parameters, together with the safety data, are encouraging and underpin the rationale for our 160-patient blinded, randomized GRECO-2 trial of GC4711 with SBRT in pancreatic cancer, where the primary endpoint is overall survival. These are exciting times for Galera as we also look forward to announcing topline data from our ROMAN Phase 3 trial for the reduction of severe oral mucositis in patients with head and neck cancer later this year."

[Clinical Trial of Epcoritamab \(DuoBody®-CD3xCD20\) in Patients with R/R B-NHL Published in The Lancet](#)

"The publication of these data in The Lancet, coupled with the presentation of the results at multiple medical congresses, demonstrate the importance of these early results and underscore the significant interest in the potential of next generation antibody therapeutic options for patients diagnosed with hematologic malignancies, whose current treatments may not be providing benefit," said Jan van de Winkel, Ph.D., Chief Executive Officer of Genmab. "Together with our partner, AbbVie, we are committed to evaluating the safety and efficacy of epcoritamab in patients diagnosed with B-cell Lymphomas and other hematologic malignancies."
