

Bring Your Own Device (BYOD) Android Directions

Connect to the “NISD” wireless network
When prompted input your NISD network username and password.

Launch the phone’s internet browser
(Samsung internet, Chrome, etc.) and type cert.nisdtx.org.

Click on the blue words to install the NISD webauth certificate.

When you click to install the certificate, it will download the certificate.

Once the certificate finishes downloading, you'll be prompted to verify your identity or enter your phone's password to allow the certificate to be installed.

The phone will request a name for the certificate to install it on your phone. Enter “NISD” as the name and then tap “OK.”

At this point the webauth certificate should be installed and correctly added to your device. Your device should now safely connect to the NISD network.
