

# Kognity NGSS (High School): Detailed outline template

Links for your convenience:

- [Writing Manual](#)
- [Author Brief](#)

## Guiding Questions/Tips:

- You are focusing on splitting the subtopic idea (provided by reviewers) into sections/subsections. Note that 5 section templates exist in this planning document. We anticipate roughly 1 section per “E”. However, you may choose to break the content up differently. For a reminder of the Kognity structure, see p.4 in the Writing Manual.
- How will your Anchoring Phenomenon drive this learning journey?
  - What activities and questions will help students to meet the PEs?
  - Have you included sufficient opportunities for inquiry?
  - How will you progress through the 5Es?
- Is the content relevant to all students (diverse, engaging, inclusive)?
- Please indicate where you might bring in extra literacy support;
- **This is a plan only. No need to write out your ideas and exercises in full** – we ask authors to do this at manuscript-writing stage.
  - However, please give an idea of the kind of content (if you want to use third party content, such as a video or simulation, please include a link to the source) and activities you want to include. These ideas will be shared with the rest of the team, to stimulate feedback and discussion.
- For investigations/activities/simulations, please include a link to any inspiration or a brief description of the content you envisage.
- See the *green italics* for guidance/examples.

## Subtopic plan: Basics

Topic and subtopic info	
Topic Name:	Nuclear Processes
Subtopic Name:	Evidence of Plate Tectonics
Link to topic plan:	
Brief explanation of how subtopic connects to the anchoring phenomenon	Do Earth's moon and other planets in our solar system show evidence of tectonics?
<b>Running list of anticipated media requests: (art, interactives, videos, etc.)</b> <i>Please keep a running list of required media for the art team.</i>	<a href="https://www.edumedia-sciences.com/en/curriculum/1395-1-develop-and-use-a-model-of-the-earth-sun-moon-system-to-describe-the-cyclic-patterns-of-lunar-phases-eclipses-of-the-sun-and-moon-and-seasons">https://www.edumedia-sciences.com/en/curriculum/1395-1-develop-and-use-a-model-of-the-earth-sun-moon-system-to-describe-the-cyclic-patterns-of-lunar-phases-eclipses-of-the-sun-and-moon-and-seasons</a>  <a href="https://www.edumedia-sciences.com/en/media/71-lunar-eclipse">https://www.edumedia-sciences.com/en/media/71-lunar-eclipse</a>  <a href="https://www.edumedia-sciences.com/en/media/216-sun-earth-moon">https://www.edumedia-sciences.com/en/media/216-sun-earth-moon</a>  <a href="https://www.edumedia-sciences.com/en/media/537-4-seasons-1">https://www.edumedia-sciences.com/en/media/537-4-seasons-1</a>  <a href="https://www.edumedia-sciences.com/en/media/606-moon-phases">https://www.edumedia-sciences.com/en/media/606-moon-phases</a>  <a href="https://scied.ucar.edu/learning-zone/earth-system/biogeochemical-cycles">https://scied.ucar.edu/learning-zone/earth-system/biogeochemical-cycles</a>  <a href="https://www.amnh.org/exhibitions/permanent/planet-earth/why-is-the-earth-habitable/earth-cycles">https://www.amnh.org/exhibitions/permanent/planet-earth/why-is-the-earth-habitable/earth-cycles</a>  <a href="https://www.lpi.usra.edu/education/explore/shaping_the_planets/tectonism/">https://www.lpi.usra.edu/education/explore/shaping_the_planets/tectonism/</a>  <a href="https://www.nationalgeographic.org/media/plate-tectonics/">https://www.nationalgeographic.org/media/plate-tectonics/</a>

## Section 1: Cyclic Patterns of Earth's Materials and Energy

Please begin each section with an **Introduction subsection** and end each section with a **Reflection subsection**. Feel free to include as many content subsections as you want in between. We recommend 4-5 subsections. Use the color coded guide on p. 5 of the [writing manual](#) to support your filling in of the sections.

Overview		
Standard(s) covered:	<b>HS-ESS1-5</b>	<b>Evidence of Plate Tectonics</b> Evaluate evidence of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks.
DCI(s) covered:	<b>PS1.C: Nuclear Processes</b> Nuclear processes, including fusion, fission, and radioactive decays of unstable nuclei, involve release or absorption of energy. The total number of neutrons plus protons does not change in any nuclear process. <b>ESS1.C: The History of Planet Earth</b> Continental rocks, which can be older than 4 billion years, are generally much older than the rocks of the ocean floor, which are less than 200 million years old. <b>ESS2.B: Plate Tectonics and Large-Scale System Interactions</b> Plate tectonics is the unifying theory that explains the past and current movements of the rocks at Earth's surface and provides a framework for understanding its geologic history.	

CCC(s) covered:	Patterns - Empirical evidence is needed to identify patterns	
SEP(s) covered:	Engaging in Argument from Evidence - Evaluate evidence behind currently accepted explanations or solutions to determine the merits of arguments.	
	<b>Vocab words included:</b> <i>Lunar phases</i> <i>Solar Eclipse</i> <i>Lunar Eclipse</i> <i>Plate Tectonics</i> <i>Water cycle</i> <i>Carbon cycle</i> <i>Nitrogen cycle</i> <i>Oxygen cycle</i>	<i>Do Earth's moon and other planets in our solar system show evidence of tectonics?</i>
Introduction subsection	<i>Engage</i>	
	<b>The purpose of this subsection is to introduce the E and spark the students' curiosity.</b> <i>Do Earth's moon and other planets in</i>	<b>Tie to previous work:</b> <i>Review middle school standards MS-ESS1 and MS-ESS2:</i> <ul style="list-style-type: none"> <li><i>Describe the cyclic patterns of lunar phases, eclipses of the sun and moon, and seasons.</i></li> </ul>

	<p>our solar system show evidence of tectonics? Do cyclic patterns on Earth help explain plate tectonics?</p> <p><b>What instructions will be provided for teachers here (to be included in a separate part of the resource)?</b> Sources for information on cyclic patterns of lunar phases, eclipses of the sun and moon, and seasons; cycling of Earth's materials and the flow of energy.</p>	<ul style="list-style-type: none"> <li>Describe the cycling of Earth's materials and the flow of energy that drives this process.</li> </ul> <p>As a whole class recall what you know about the topics above.</p> <p><b>General Notes/Activities:</b> Break into groups of two or three to compose at least 3 questions about the place of the Earth in the universe including Earth's cyclic patterns.</p> <p>Some of these questions could include:</p> <ul style="list-style-type: none"> <li>Distinguish between a lunar eclipse and a solar eclipse.</li> <li>Describe the alignments necessary for an eclipse to occur</li> <li>Link the alternating seasons on Earth to the Earth's inclination on its orbit.</li> <li>Understand the effect of Earth's inclination on the duration of daylight.</li> <li>Display the Sun/Moon/Earth configuration for each phase of the moon.</li> <li>Review and outline the processes in the four main cyclic patterns on Earth: the water cycle, the carbon cycle, the nitrogen cycle, and the oxygen cycle.</li> </ul> <p>The following are helpful websites for your research:  <a href="https://www.edumedia-sciences.com/en/media/71-lunar-eclipse">https://www.edumedia-sciences.com/en/media/71-lunar-eclipse</a>  <a href="https://www.edumedia-sciences.com/en/media/216-sun-earth-moon">https://www.edumedia-sciences.com/en/media/216-sun-earth-moon</a>  <a href="https://www.edumedia-sciences.com/en/media/537-4-seasons-1">https://www.edumedia-sciences.com/en/media/537-4-seasons-1</a>  <a href="https://www.edumedia-sciences.com/en/media/606-moon-phases">https://www.edumedia-sciences.com/en/media/606-moon-phases</a>  <a href="https://scied.ucar.edu/learning-zone/earth-system/biogeochemical-cycles">https://scied.ucar.edu/learning-zone/earth-system/biogeochemical-cycles</a>  <a href="https://www.amnh.org/exhibitions/permanent/planet-earth/why-is-the-earth-habitable/earth-cycles">https://www.amnh.org/exhibitions/permanent/planet-earth/why-is-the-earth-habitable/earth-cycles</a> </p> <ul style="list-style-type: none"> <li>After composing your questions in groups, return as a whole class and combine your questions.</li> <li>Use the questions to create a Jeopardy game that you will play as a whole class.</li> </ul>

If so, why?</i></li> </ul>

## Section 4: Plate Tectonics and the Ages of Crustal Rock

Please begin each section with an **Introduction subsection** and end each section with a **Reflection subsection**. Feel free to include as many content subsections as you want in between. We recommend 4-5 subsections. Use the color coded guide on p. 5 of the [writing manual](#) to support your filling in of the sections.

Overview		
Standard(s) covered:	<b>HS-ESS1-5</b>	<b>Evidence of Plate Tectonics</b> Evaluate evidence of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks.
DCI(s) covered:	<b>PS1.C: Nuclear Processes</b> Nuclear processes, including fusion, fission, and radioactive decays of unstable nuclei, involve release or absorption of energy. The total number of neutrons plus protons does not change in any nuclear process. <b>ESS1.C: The History of Planet Earth</b> Continental rocks, which can be older than 4 billion years, are generally much older than the rocks of the ocean floor, which are less than 200 million years old. <b>ESS2.B: Plate Tectonics and Large-Scale System Interactions</b> Plate tectonics is the unifying theory that explains the past and current movements of the rocks at Earth's surface and provides a framework for understanding its geologic history.	
CCC(s) covered:	<b>Patterns - 1</b> Empirical evidence is needed to identify patterns	
SEP(s) covered:	<b>Engaging in Argument from Evidence - 7</b> Evaluate evidence behind currently accepted explanations or solutions to determine the merits of arguments.	
	<b>Vocab words included:</b> <i>Pangea</i> <i>Continental Drift</i> <i>Convection</i> <i>Thermal vent</i>	<b>Driving question(s):</b> <i>Do Earth's moon and other planets in our solar system show evidence of tectonics?</i>
Introduction	<i>Engage</i>	

subsection	
	<p><b>The purpose of this subsection is to introduce the E and spark the students' curiosity.</b>  <i>Do Earth's moon and other planets in our solar system show evidence of tectonics?</i></p> <p><b>What instructions will be provided for teachers here (to be included in a separate part of the resource)?</b>  <i>Sources of information on Pangea, Alfred Wegener, the theory of Continental Drift</i></p> <p><b>Tie to previous work:</b>  <i>You have reviewed and gained information about the cyclic patterns on Earth, the nuclear processes of atoms, and the theory of plate tectonics. As you synthesize this information, can you make connections about how the theory of plate tectonics explains the ages of crustal rocks on Earth and on the ocean floor.</i></p> <p><b>General Notes/Activities:</b>  <i>Website:</i>  <a href="http://thebritishgeographer.weebly.com/plate-tectonic-theory.html">http://thebritishgeographer.weebly.com/plate-tectonic-theory.html</a>  <i>Scroll down until you reach the video "Continental Drift."</i></p> <p><i>This video explains the theory held by a scientist, Alfred Wegener, about continental drift. Wegener's theory included the idea that the seven continents that exist on Earth today were originally one gigantic supercontinent called Pangea.</i></p> <p><i>As you watch this video, answer questions:</i></p> <ul style="list-style-type: none"> <li><i>What caused Pangea to break apart?</i></li> <li><i>What is the underlying phenomenon that accounts for continental drift?</i></li> <li><i>How is continental drift related to plate tectonics?</i></li> <li><i>Is the phenomenon that accounts for continental drift and plate tectonics a phenomenon that you can witness elsewhere on Earth?</i></li> </ul>
