

Advanced Metals Projects

Grade Levels: 12th

Prerequisites: Intro to Industrial Technology, Intermediate Metals, Advanced Metals

Course Numbers: 2412MP1, 2412MP2

Credit Type: CTE or Elective

Course Description:

Advanced Metals Projects is a course for those students who desire a fourth year in the metals lab to build projects. Projects can be for the student, the school or the community. Students are expected to be self motivated and remain on task just like an employee in the metalworking industry. Students may also work on competencies for articulated community college courses (if PCC is articulating with the current instructor). The course that is being attempted to articulate at this time is MCH 100: Machine Tool Basics through Portland Community College. Students will be notified once articulation is agreed upon with PCC.

Student Workload:

Mostly in-class assignments.
