ABSTRACT

The abstract is written in a single paragraph without subheadings, consisting of 150 to 200 words. It must be written in English using an academic, objective, and clear style to comprehensively reflect the substance of the research. The abstract should be formatted in **Times New Roman, size 10 pt, with single spacing (1.0)**. References or citations are not allowed. The abstract should end with a list of **three to five keywords** that are relevant to the content of the research and easily indexed.

The content structure of the abstract includes several main components, namely background, objective, method, findings and implications, and conclusion.

Background: provides a brief overview of the issue or problem underlying the research and its relevance to the field of study.

Objective: is briefly stated to indicate the direction and focus of the research conducted.

Method: describes the approach, design, and techniques of data collection and analysis used in the study.

Findings and Implications: present the main results of the research along with their impact or contribution to the development of knowledge, practice, or policy.

Conclusion: contains the final statement that answers the research objective and, if necessary, provides recommendations or directions for future research.

INTRODUCTION

The introduction must contain (in order) general background, a review of previous literature (state of the art) as the basis for a statement of scientific novelty from a journal article or scopus, a statement of scientific novelty and research problems or hypotheses. At the end of the introduction, the purpose of the article study must be written. In the format of scientific articles, there is no literature review as in the research report, but it is manifested in the form of a previous literature review (state of the art) to show the scientific novelty of the article. (12PT TNR)

METHOD

This section contains about the design or design of the research conducted. In this section, at least it contains the type of research, research subject/object, data collection

techniques/instruments, and data analysis. If the script requires a table or an image. (12PT TNR)

RESULTS AND DISCUSSION

The results and discussions contain the results of research findings and their discussion scientifically. Write down the scientific findings obtained from the results of the research that has been carried out but must be supported by adequate data. The scientific findings referred to here are not the data obtained from the research results. The scientific findings should be scientifically explained including: What are the scientific findings obtained? Why is that possible? Why is variable trend like that? All these questions must be explained scientifically, not only descriptively, if necessary supported by adequate basic scientific phenomena. In addition, it must also be explained that it is comparable to the results of other researchers who have almost the same topic. The research results and findings must be able to answer the research hypothesis in the preliminary section. (12PT TNR)

CONCLUSION

Conclusions describe the answers to the hypothesis and/or the purpose of the research or scientific findings obtained. The conclusion does not contain a repetition of the results and discussion, but rather a summary of the findings as expected in the purpose or hypothesis and is the author's justification. If necessary, at the end of the conclusion, you can also write down the things that will be done related to the next idea of the research. (12PT TNR).

FUNDING

The author states that no financial support has been received for the implementation of this research and/or the publication of this article.

CONFLICT OF INTEREST

GENERATIVE ARTIFICIAL INTELLIGENCE USAGE STATEMENT

The authors state that generative artificial intelligence (AI) was used in the preparation of this manuscript. The authors acknowledge the use of generative AI to help improve language clarity and improve the grammatical structure of manuscripts. The use is carried out in compliance with applicable ethical guidelines regarding the use and disclosure of generative AI in scientific research. Each author has made substantial intellectual contributions to this work. The entire content of the manuscript has been carefully reviewed to ensure its accuracy, and the author is solely responsible for the integrity and final content of the manuscript

The author states that this research was conducted without any commercial or financial relationship that can be interpreted as a potential conflict of interest.

AUTHOR CONTRIBUTION

If relevant, statements regarding the contributions of each author may be included in this section.

REFERENCES

The main references are international journals and proceedings. All references must refer to the most relevant and up-to-date sources, and the minimum references are 15 entries (for original research papers) and 50 entries (for review/survey papers). References are written in the style of the 7th APA. For more complete guidance can be accessed at (http://ipmuonline.com/guide/refstyle.pdf). Use tools like EndNote, Mendeley, or Zotero for reference management and formatting, and choose the American Psychological Association's (APA) 7th style. Please use consistent formatting for reference—see example (12 pt):
