Heat Pump Repair

The absolute last thing that anyone wants to deal with in the middle of winter or even during a chilly spring is a broken heat pump that requires repair. If you are having issues with your heat pump or heating system in general, you need to have the problem fixed as quickly as is possible to ensure your family's comfort. At Air Check Mechanical Service, we understand that your time is valuable, and our South Houston heat pump repair experts work hard to solve your heating and cooling problems quickly, efficiently, and at a price you'll be pleased with.

When you call us for Heat Pump repair services, you can be sure that you're working with a company that has experienced technicians that you can trust. We will never pressure you to buy products or services that you do not need. Instead, we focus on providing affordable, high quality HVAC services to each and every customer that calls.

Air Check Mechanical Service offers professional heater and heat pump repair services across the entire South Houston area. Contact us [here](#) to get started.

When To Call A Heat Pump Specialist

Sadly, far too many people go through the year in South Texas with an underperforming heating system. You may notice that your home is not as comfortable as it once was, but perhaps have very little idea of how to solve the issue. An inefficient or malfunctioning heat pump may be the culprit that is sapping

AC Installation Repair Maintenance

your family's comfort. There are several signs of a heat pump, furnace or overall heating system issue, and many of them are more subtle than you might think. It is always best to be aware of a heat pump problem early, as when you are looking for a repair service, the sooner the problem is caught, generally the cheaper the fix, and the less likely you'll experience a full heating system breakdown.

Signs of a real heating system problem include:

Burn or scorch marks around your heat registers

Noxious or burning smells coming from your house's vents

Your furnace or heating unit will not or does not turn on

Strange sounds originating at your furnace

The pilot light does not turn on

There are hot and cold spots throughout or in a few places in your home

Your home's air quality seems to be heavily reduced

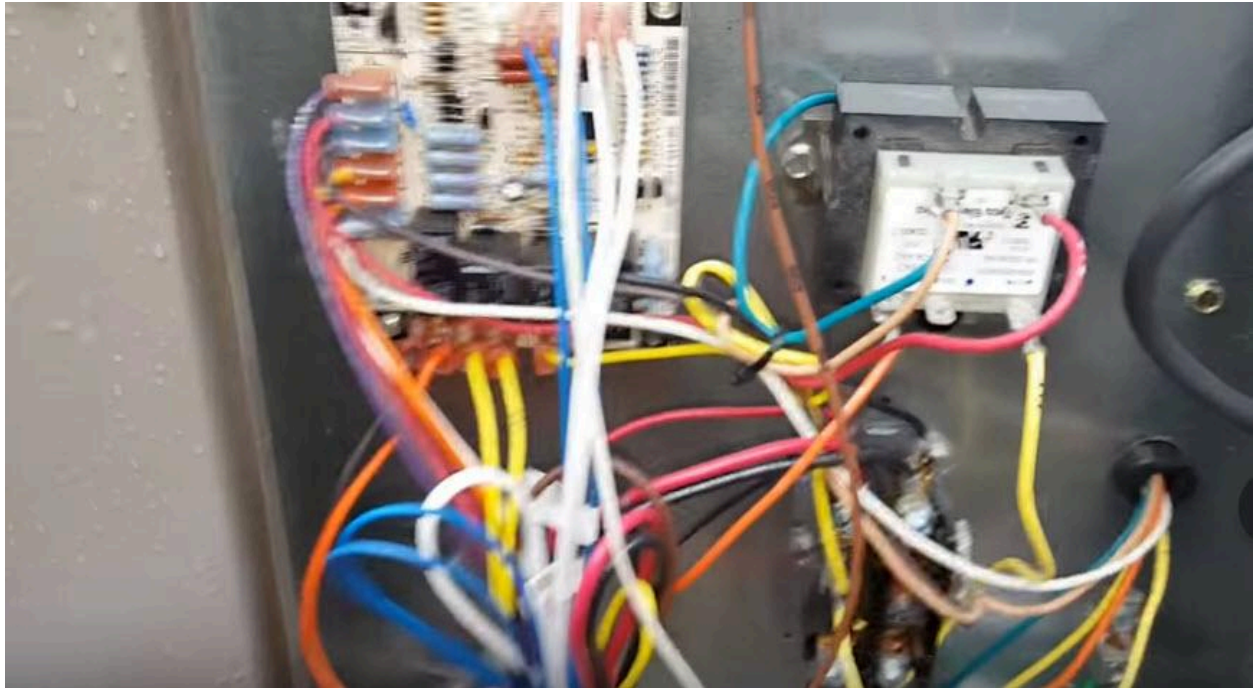

Your furnace or heat pump is continually turning off and on

Another excellent way to determine whether you may be having heat pump issues is to consult your utility bills. If you notice any kind of odd increase and can pair it with any of the issues noted above, it may be a sign that your heating system is struggling and needs either repair or replacement.

Air Check Is Your Trusted South Houston Heat Pump Repair Company

During the chillier months, problematic heat pump and furnaces can be a major cause of discomfort in your home. In addition to difficulties maintaining certain temperatures, a malfunctioning heat pump can irritate your allergies and increase the overall amount of dust and dirt not only in the air, but in your home in general. All of these aspects may cut down on your overall enjoyment of your home and can affect your health as well. Air Check Mechanical Service is here to help you solve these issues and more.

We offer repair service on all types of heating systems, including:

- Heat Pumps
- Radiant heating
- Central heating
- Gas furnaces
- Thermostats
- Boilers and water heaters

If after a thorough heating system or heat pump inspection we determine that your best course of action is heat pump replacement, our Houston heater repair professionals will guide you through the process so that you understand all aspects of your purchase, including warranties and maintenance agreements. We will provide you with a variety of heating system options and upgrades, and help you to select the heat pump or furnace model that works best for your family and you.

Complete Heat Pump & Furnace Repair

The best way to stay in front of any furnace or heat pump issues is to consider a routine maintenance plan. Yearly or seasonal heating system maintenance offers you the opportunity to have your heating system professionally inspected, your air filters changed, and any repair issues to be identified and addressed immediately. Regular inspections and timely repairs are the number one way to extend the life of your current heating system, and they also help you avoid significant and expensive repairs down the line.

At Air Check Mechanical Service, we are proud members of the Harris County community. As a local, family owned HVAC business, we take all of our customer relationships very seriously. Our heat pump specialists are completely committed to professionalism. You can always be assured that when you hire Air Check to handle your heat pump repair or installation, we will show up on time, and treat your home with exceptional care.
