

DIGITAL PEDAGOGY

What I would like to express is this: It appears to be extremely challenging to me. For the first time, I am beginning lessons and handling all of the necessary tasks on my own. It is possible to use badges as a visual representation of a person's accomplishments, abilities, or knowledge when it comes to online education. When I first began to learn about digital pedagogy through practice. Now I would like to be able to state that my accomplishments in digital pedagogy may attributed to the Badges.

Because of the badges, I can demonstrate to others that I am dedicated to lifelong learning. As a way to bring my achievements to light outside of the classroom, it is something I like. There was a time when I did not know, and it may have been because of my faults or my lack of expertise. Using digital badges as a classroom identification example is something that personally appeals to me. For enhancing my proficiency in the field of educational technology, I am on the lookout for resources that will help me devise and implement effective teaching strategies.

1. SHARING FILES ONLINE

I learn about and gain an understanding of the options that Google Drive and Google Documents provide for supporting my study and using them for guidance, working with my group, and as a collaborative tool. Together with my team, we produce and exchange Google documents in order to learn from one another.
