Convio: Upload a number of files or images at once

Note: an admin account may be required

1. Prepare a zip file with your images or other files (have so far tested it with JPG, CSS, font files and JS files successfully).
2. In CMS go to Reports and Tools > All Reports and Tools > Under the heading "Bulk Operations" click Upload Assets > Click Choose File and find your zip file then click open > Choose a target folder to store your uploaded content > Click Import

Visit that folder, check on everything, check the images you wish to publish and then click publish.
