Wii Modding Guide

(FS47)

Disclaimer

This guide is for the **Wii!** It DOES NOT work on the Wii U's vWii OR Wii Mini.
If you are unfamiliar with this process, it's good practice to watch the video through once to get an idea of how it works before doing it yourself. Take it slow, and you shouldn't run into any issues.

As always, HAPPY MODDING!

TROUBLESHOOTING

DNS Settings Exploit does not work

Some internet providers' ISP block this exploit from working. Known providers are Rogers Xfintity & Spectrum. You can potentially bypass this by using your phone's hotspot.

Wilbrand Letter does not show up in messages

Make sure your date and time are correct in your Wii Settings and go back a few days and forward a few days to look for the letter.

USB Loader GX Issues (Next Page)

USB Loader GX freezes while loading

- **“Reinitializing devices”:** Your USB storage device is most likely NOT compatible, sadly.

- **“Waiting for HDD”:** Make sure your USB Storage device is plugged into PORT 0. (On the right side while standing up, or the bottom if the Wii is flat)

USB Loader GX loads as a white screen

Your USB storage device is not compatible. It is recommended to have an HDD formatted as FAT32. Or try a different flash drive on the compatibility list OR the ones Scott links in his video. (PNY 32gb 2.0, PNY 128gb 3.0)

Games don't show up

- Games MUST be WBFS format. ISO does not work (but can be converted using Wii Backup Manager)
- Make sure your USB storage is formatted as FAT32
- USB device may not be compatible… (many flash drives are not)

Starting a game sends you back to Homebrew Channel

Your Custom IOS’s are not installed correctly. Redo the process and make sure they were successfully installed using YawmME.

Game loads into a black screen

Most likely a problem with the game file itself. Try using a different download source for WBFS files. Check my Patreon or Discord Server.
