

Target market: A person that wants to become a K8 administrator and want to improve his Kubernetes skills

Avatar: Michael, 27

Current state: Michael is working a full-time job as a K8s Administrator and finds it challenging to balance her work and personal life with her studying commitments. She often feels like she doesn't have enough time to study as much as she would like to.

Kubernetes is a complex system with many components, each with its own set of configuration options and commands. Understanding how these components work together and how to configure them correctly can be overwhelming for him since he is new to Kubernetes.

While there are many resources available online to learn Kubernetes, finding the right ones can be a challenge. Michael finds that some tutorials and documentation are out of date, incomplete, or difficult to follow.

Once Michael becomes a K8 administrator, he will also be responsible for ensuring the security and scalability of the system. This can be a daunting task that requires knowledge and experience beyond basic Kubernetes administration.

Dream state: Michael is passionate about Kubernetes and desires to have a deep understanding of the technology. He wants to be able to work with Kubernetes confidently and effectively.

Michael desires to advance his career by becoming a certified Kubernetes expert. He hopes that it will open up new opportunities for him and help him achieve his professional goals.

Michael wants to become a master of Kubernetes administration. He is driven by the desire to understand every component of the system, how they work together, and how to configure them to achieve optimal performance.

Roadblocks: Michel doesn't know where to find proven information that will allow him to have valuable resources to learn from
