# A title should be the fewest possible words that accurately describe the content of the paper, no more than 16 words (Sentence case, left, bold, 14pt)

**Author 1*, Author 2, Author 3, Author 4, Author 5** ←(11pt, bold, maximum consisting of 5 authors)
[1]Name of University, Country ←10pt, Times New Roman
[2]Name of University, Country ←10pt, Times New Roman
[3]Name of University, Country ←10pt, Times New Roman
[4]Name of University, Country ←10pt, Times New Roman
[5]Name of University, Country ←10pt, Times New Roman
[1]author@author.com*, [2]author@author.com, [3]author@author.com, [4]author@author.com, [5]author@author.com

Article Info

*Article history:*
Received DDMMYY
Revised DDMMYY
Accepted DDMMYY

*Keyword:*
The first keyword; the second keyword; the third keyword; The fourth keyword; The fifth keywords. (There are a minimum of five keywords and a maximum of six keywords)

ABSTRACT

A well-prepared abstract allows readers to quickly and accurately identify the basic content of a document, determine its relevance to their interests, and thereby decide whether to read the document in its entirety. The abstract must be informative and clear enough, written clearly, and provide a clear statement of the problem, research objectives, research methods, findings, and conclusions. Abstracts should consist of 100 to 200 words. The abstract must be written in the past tense. Standard nomenclature should be used, and abbreviations should be avoided. No literature may be cited. Keyword lists provide the opportunity to add keywords used by indexing and abstracting services in addition to the keywords already present in the title. Wise use of keywords can increase the ease with which interested parties find our articles (9 pt).

## INTRODUCTION

The introduction contains (1) research background; (2) research objectives; (3) research contributions (benefits), and (4) include a review of the previous literature followed by the novelty of the research or the originality of the article and try to have references to articles from journals from the last 10 years that strengthen the justification for originality. At the beginning of the paragraph one time tab, the introduction should not be divided into the background, problem formulation, and objectives sub-chapters. Citations are written in body note format and are relevant to the bibliography (it is recommended to use the Mendeley application or other reference management application programs such as EndNote, Reference Manager, or Zetero) (Times new romance 11, before after 0).

## LITERATURE REVIEW (Capital, bold , Times new romance 11 pt)

The literature review is an important part of writing scientific articles, serving to examine and summarize various literature, theories, and previous research results relevant to the topic of study. The literature review is not merely a compilation of quotations from various sources, but is systematically arranged using a synthetic approach so that readers can see the connection between theory and the focus of the research. The main objective is to map the development of scientific studies related to the

chosen topic and to show that the author has a deep understanding of the theoretical context of the problem to be studied. (Times new romance 11, before after 0).

## RESEARCH METHODS (Capital, bold , Times new romance 11 pt)

The Methods section must be short but must include sufficient technical information and contain the type of research, research population, research samples or subjects, and data analysis techniques. Only new methods have to be described in detail. Cite previously published procedures in References. (Times new romance 11, before after 0).

## RESULTS AND DISCUSSION (Capital, bold , Times new romance 11 pt)

Results should include the rationale or design of the experiment as well as the results of the experiment. Results can be presented in the form of images, tables, and text. Research findings must be supported by adequate data. This section must answer the research hypothesis.

The discussion should be an interpretation of the results, not a repetition of the results. This discussion includes at least: an explanation of the meaning of the findings and why the findings are important; Support the answer with the results. Explain how your results relate to expectations and the literature; state clearly why the results are acceptable and whether there is any agreement or conflict with previous research results; consider alternative explanations for the findings; consider research implications; study limitations; and provide suggestions for further research.

Avoid writing in the form of bullet numbering or item list style; it is best to write it in the form of a descriptive paragraph, even though it is a list item. If it contains tables and figures, the numbering is a continuation of the previous number. Each table and figure must be given a title. (Times new romance 11, before after 0).

### Table

The table is in the middle. Use Times New Roman and font sizes 8 to 11. Horizontal lines in the middle of the table do not need to be displayed; only display the heading and the very end, and there should also be no vertical lines. Make sure you create the table correctly via the Insert Table menu. Tables should be referenced in the text by writing something like: '... (Tables are written with a capital 'T').

**Table 1. Title Of The Table**
(Capitalize Each Words and bold)

| No. | This line | |
|---|---|---|
| 1 | This table contents, if not enough, you can reduce the font size to 8 points. Don't go any smaller than this, unless you want your readers to hurt your eyes. :-) | Regular table fill font |

Try not to truncate the table on different pages unless the size exceeds one page. If you have to truncate, don't forget to rewrite the header row for each column, given the same table serial number, and replace the title with Continuation. The table title does not end with a period. Tables do not need to use vertical lines.

**Figure**

As with tables, make sure each figure has a sequence number and a title. Make the images you use to look like they're professionally made and don't need to be framed. It is better to use black-and-white images

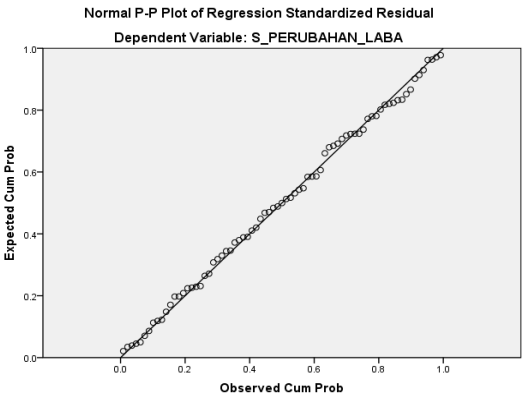

**Figure 1. The title of the image**
(also uses Capitalize Each Words, bold)

**CONCLUSION (Capital, bold , Times new romance 11 pt)**

The conclusion must contain confirmation of the problems that have been analyzed in the results and discussion sections. Write a conclusion concisely and clearly. It is not recommended that the conclusion be written in several parts or points. The conclusion is intended to help readers understand why your research is important to them after they have finished reading the manuscript. A conclusion is not simply a summary of the main topics discussed or a restatement of your research problem, but rather a synthesis of the important points. It is important that the conclusion does not leave any questions unanswered.

**REFERENCES (Capital, bold , Times new romance 11 pt)**

Written using the style of the American Psychological Association 7th edition, 80% of references must be primary sources, references from the last 10 years, and it is recommended to use the Mendeley application or other reference management application programs such as EndNote, Reference Manager, or Zotero. The bibliography does not need to be divided into sections. The minimum number of references in the bibliography is 15 references. The following is an example of bibliography writing:
