Duplicate share controls on every sampled article: all 10 current homepage articles tested render two identical “Share this story” groups—one after the featured image and another after the article topics. This duplicates four interactive controls per article and adds unnecessary keyboard/screen-reader stops. (Every articles shown like this)

The screenshot shows a web browser window with the URL allaboutdurham.com/durham-highway-closures-october-17-2026/. The page layout includes a left sidebar with 'BROWSE BY CATEGORIES' and 'BROWSE BY TOPICS', a main content area, and a right sidebar with related articles. The main content area features a 'SHARE THIS STORY' button followed by social media sharing options (Facebook, LinkedIn, Email, Copy link) which are highlighted by a red box. Below this is a 'Sources' section with two links. Further down is a 'Have a story to share?' section with an 'Email Your Story' button. At the bottom of the main content area, there is a 'Topics' section with tags for 'Durham region', 'Highway 401', 'Oshawa', 'Pickering', 'Roadwork', and 'Whitby'. Below the topics, another set of social media sharing options (Facebook, LinkedIn, Email, Copy link) is highlighted by a second red box, identical to the one above. The right sidebar contains a list of related articles with their titles and dates.

Feature Image missing

Highway 401 Lane Work Extends Through October

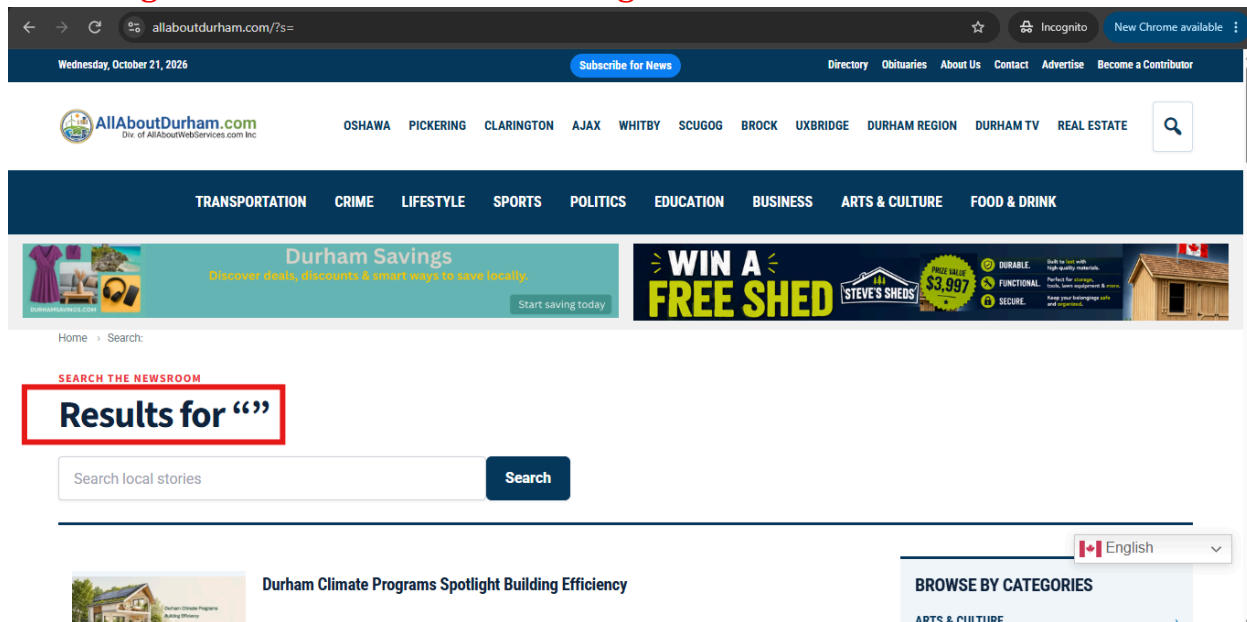

IAL TEAM 10 VIEWS

and October 25–30 overnight Highway 401 lane restrictions

English

© 2026 All About Durham

Empty search, all three sizes: empty/spaces-only submissions display confusing blank “Results for...” headings.

The floating language selector partially covers article text at certain reading positions.

The additional Oshawa Highway 401 lane work records were last updated by the province on October 20 between 11:39 and 11:44 a.m. They materially extend the local construction schedule beyond the Ritson–Harmony window in earlier coverage.

Other previously announced restrictions remain set

The existing October 18–23 entries still describe two alternating lanes in both directions between Ritson and Harmony. Separate work involving Stevenson Road, Simcoe Street and

On the homepage, at certain scroll positions, clicking the centre of Next opens the language menu instead of page 2. The exposed edge still works.

Choose the Durham communities you want to hear about

JNews script throws “Cannot read properties of undefined (reading ‘selectShare’)” on five sampled pages, including Contact.

C1 · Cannot read properties of undefined (reading 'selectShare')

Medium · Uncaught JavaScript exception

Affected: 15 primary inspections · desktop, tablet, mobile

Example page URLs: <https://allaboutdurham.com/bay-ridges-kinsmen-playground-reconstruction-2026/> · <https://allaboutdurham.com/contact/> · <https://allaboutdurham.com/become-a-contributor/>

```
TypeError: Cannot read properties of undefined (reading 'selectShare')
    at https://allaboutdurham.com/wp-content/plugins/jnews-social-share/assets/js/plugin.js:1:65
    at https://allaboutdurham.com/wp-content/plugins/jnews-social-share/assets/js/plugin.js:1:3451
```

Evidence and impact: The JNews social-share script aborts at initialization while accessing window.jnews.selectShare. Fresh focused article checks independently recorded window.jnews as undefined. This confirms a plugin initialization error, not that every custom share button on the site fails.

Recommended correction: Check compatibility and script dependency/enqueue order for the active custom theme. Initialize the required JNews base dependency correctly, or stop loading this legacy plugin script on templates that do not support it. Retest actual sharing controls without publishing a share.

Source: <https://allaboutdurham.com/wp-content/plugins/jnews-social-share/assets/js/plugin.js>

[Rendered captured-log screenshot \(not DevTools UI\)](#) · [Affected-page screenshot](#)

► All affected page URLs

The sample article view-count request returns HTTP 403. This is a background request—not a form-submission failure.

C3 · Article view-count request rejected with HTTP 403

Low · Failed background HTTP request / console error

Affected: 3 primary inspections · desktop, tablet, mobile

Example page URLs: <https://allaboutdurham.com/bay-ridges-kinsmen-playground-reconstruction-2026/>

```
Failed to load resource: the server responded with a status of 403 ()
POST /wp-admin/admin-ajax.php
action=aaws_article_view
Response: {"success":false}
Initiator: /wp-content/themes/aaws/assets/js/views.js?ver=3.0.12, count(), line 11 (CDP zero-based
lineNumber 10).
```

Evidence and impact: Focused fresh article visits at the three viewport sizes identified the rejected request as the theme’s automatic article-view action. That request did not succeed. This is not a form-submission failure and does not prove all displayed site-wide view counts are wrong. The exact server-side rejection reason remains unconfirmed.

Recommended correction: Inspect the legitimate article-view handler, nonce freshness on cached articles and expected public-user permissions. Fix the client/server contract while retaining authorization and abuse protection; do not disable security checks merely to suppress the console error.
