

Resume Maker App

<https://main-app-server.resume2x.workers.dev>

Feature Highlights:

1. All templates meet professional standards and deliver top quality.
2. Largest unique template collection. (60+, more will be added later).
3. The most customizable resume maker, offering over 70% customization.

How is this resume maker different from others?

Render – Core system powering all templates 🦾:

The core and most challenging component of any resume maker is the resume-render. The overall quality, advanced layout support, number of templates, depth of customization, and scalability for future template additions all depend on it.

If you look closely, even large and established resume maker platforms still rely on their initial render architecture or on a less capable resume render.

Over the years, their templates have remained largely the same, while most of their updates focus on the app's ui, AI features, and heavy marketing to attract more users.

To confirm, take a look at the links below. You can compare their templates with our collection:

- Our Templates collection: <https://main-app-server.resume2x.workers.dev/#templates>
- Indeed's [resume.com](https://www.indeed.com/resume-builder)
- [weworkremotely.com](https://www.weworkremotely.com) resume maker -> <https://cvstep.com/templates.html>
- India's largest job portals resume makers:
<https://www.naukri.com/resume-maker> , <https://www.foundit.in/career-services/premium-resume-builder>
- Bold LTD's([flexijobs.com](https://www.flexijobs.com)'s) <https://www.myperfectresume.com/cv/templates>
- [jobseeker.com](https://www.jobseeker.com)
- <https://www.tealhq.com/resume-templates>
- <https://resumebuild.com/resume/templates/>
- <https://www.resumebuilder.com/resume-templates/>
- <https://enhancv.com/resume-templates/>
- <https://resume.io/resume-templates>
- <https://resumegenius.com/resume-templates>
- <https://novoresume.com/cv-templates>

The templates I've created stand out from those of other resume makers, offering superior quality, clarity, and uniqueness. This is because I focused first on perfecting the template rendering system, ensuring exceptional precision and flexibility. While additional editor features will be introduced later, the foundation is already strong enough to outperform the rest.

Editor:

The UI design is a work in progress. My primary focus has been on perfecting the resume rendering engine. Enhancing the user interface to match other leading resume builders is the next priority.

Future Updates (Todo):

- Cover Letter Maker (By using same resume render, only components need to create)

- AI Features. (Resume analyser, Import from pdf)

App:

Current Demo App Link: <https://main-app-server.resume2x.workers.dev/>

- Until user authorization is implemented, resumes will be temporarily saved in local storage

Server Cost:

Cloudfare: 5 USD monthly.

PDF render (AWS lambda) : 0.0003 USD per pdf
