

Hardest Botted Levels List

Owned by Yan & hn0

Discord server: <https://discord.gg/kdhuv9YqA9>

LEGEND

Bold: Was done with dual merge. (Applies to the level and FV individually)

FPS: The FPS the level was bottled.

FV: The first person/people to have fully bottled the level.

[2.2]: Level works in the 2.207 version of the game.

RULES

PLACEMENT RULES

Levels must be original to be added to the list. This will be judged on a case-by-case basis. (Example of an unoriginal level: [LiGHtmAreS buffEd X](#) by Amity)

Levels must be estimated to be harder or equal in botting difficulty to the top 50 level at the time of submission to be added to the list. If a level was found to be easier than the top 50 level after being re-estimated, or it got pushed off the top 50, it will be added to the Legacy List.

Levels must be finished and must have a full working macro.

Levels must be working in the 2.113 or 2.207 version of the game.

If a level is considered list worthy on an unintended FPS or version of the game, it may be added to the list.

DIFFICULTY RULES

Difficulty of levels is estimated based on a 'blind' botting experience. (No advice or using other victor's inputs)

Levels must be physically possible to bot without physics change (this includes switching FPS mid-level). Difficulty estimation will also be done without physics change.

Level's difficulty will be estimated using the intended route. If a level has multiple routes, the creator or their fixer must specify the official one, otherwise the easiest one will be taken.

When botting a level on unintended FPS, the intended route must be as close to the original as possible.

2 player levels will be ranked by difficulty without dual merge.

CREDITING RULES

The first victor must create their own macro to be counted as one. If the playtester is the first victor their macro must not have been used to buff the level significantly. (EG: [Domba](#) and [Partys Over](#))

The first victor will be the first person to bot the level without using physics change.

If a non-playtester first victor verifiably used inputs from the playtester's macro, they will not be credited. This will be judged on a case-by-case basis. (EG: [Kase16serg's Fear Factory macro](#))

When a level gets a first victor, if said first victor used dual merge, they will be credited on the list. If a level gets bottled without dual merge later, that victor will be credited alongside the first victor.

THE MAIN LIST
