

Contents

1 Acquisition of knowledge 1

- 1.1 Introduction 1
- 1.2 Ancient thoughts 2
- 1.3 A chronicle of cognition 5
- 1.4 The rise of aerodynamics 9
- 1.5 Application of principles 14
- 1.6 Accumulation of knowledge in the twentieth century 17
- 1.7 Novel initiatives 23
- 1.8 Summary and conclusions 24

2 The flight apparatus 25

- 2.1 Introduction 25
- 2.2 Wing morphology 26
- 2.3 Dynamic wing properties 34
- 2.4 Scaling wings 37
- 2.5 Attempts to a functional interpretation of bird wings 39
- 2.6 Tail structure and function 40
- 2.7 The rest of the body in relation to flight 43
- 2.8 Summary and conclusions 44

3 Feathers for flight 46

- 3.1 Introduction 46
- 3.2 General description of contour feathers 46
- 3.3 Mechanical properties of feathers 50
- 3.4 Functional interpretation of flight-related microstructures 55
- 3.5 Tail feathers 61
- 3.6 Feather muscles and nerves 62
- 3.7 Summary and conclusions 64

4 Aerodynamics 66

- 4.1 Introduction 66
- 4.2 Rough estimates of forces and power 66
- 4.3 Visualization of the wake 72
- 4.4 The flow near a steadily gliding wing 76
- 4.5 Aerodynamics of flapping flight 87
- 4.6 Tail aerodynamics 88
- 4.7 Summary and conclusions 89

5 Evolution of bird flight 91

- 5.1 Introduction 91
- 5.2 Archaeopteryx 92
- 5.3 Landing after an arboreal or cursorial start? 96
- 5.4 The Jesus-Christ dinosaur hypothesis 98
- 5.5 How could Archaeopteryx run over water? 102
- 5.6 Other fossils with characteristics possibly related to the beginning of flight 113
- 5.7 Summary and conclusions 116

6 Bird flight modes 118

- 6.1 Introduction 118
- 6.2 The flight plan 119
- 6.3 Cruising flight characteristics 124
- 6.4 Hovering 136
- 6.5 Windhovering 138

- 6.6 Techniques to reduce the energetic demands of flapping flight 142
- 6.7 Gliding 147
- 6.8 Manoeuvring 151
- 6.9 Accurate measurements of speed 152
- 6.10 Summary and conclusions 153

7 The bird flight engine 156

- 7.1 Introduction 156
- 7.2 A glimpse under a starling's cowling 156
- 7.3 Muscle activity 160
- 7.4 Pectoralis force and work: using the deltopectoral crest as a strain gauge 165
- 7.5 The main upstroke muscle 169
- 7.6 Tail steering 171
- 7.7 Wing beat cycles and respiration 173
- 7.8 Summary and conclusions 174

8 Energy required for flight 176

- 8.1 Introduction 176
- 8.2 Mass loss estimates 177
- 8.3 Respirometric results from cunnig experiments 186
- 8.4 Gas exchange measurements in wind tunnels 188
- 8.5 Measurements based on the turnover of stable isotopes 192
- 8.6 The cost of hovering 200
- 8.7 Summary and conclusions 203

9 Comparing the metabolic costs of flight 205

- 9.1 Introduction 205
- 9.2 How to make fair comparisons? 206
- 9.3 Flight costs related to body mass 207
- 9.4 Birds compared with other flyers 212
- 9.5 Metabolic rates as units of energy expenditure 214
- 9.6 Predictions from aerodynamic models 215
- 9.7 Hovering flight 220
- 9.8 Summary and conclusions 223

Appendix 1 224

Appendix 2 228

Appendix 3 232
