

# Math SDI Tool

The purpose of this tool is to improve the quality and selection of specially designed instruction while strengthening the connection across IEP goals, progress monitoring, and KY Academic Standards. *Disclaimer: This tool is to be used in conjunction with the [Supporting Document](#) to provide an additional layer of support and guidance.*

---

## Table of Contents

### Number System and Operations

Algorithms

Fractions

Math Fact Fluency

Meaning of Symbols

Number Words and Numerals

One to One Correspondence

Place Value Understanding

Properties of operations

Ratios and Proportional thinking

Subitizing

Verbal Counting and Cardinality

Word, Situation, or Context Problems

### Algebra and Functions

Coordinate graphing

Solving Equations

Translating between multiple representations

Using structure to rewrite and evaluate expressions or formulas

### Geometry and Measurement

Constructing an argument

Measuring

Money

Shapes

Time

### Data, Statistics and Probability

Data displays

Interpreting data

Probability

# Number System and Operations ([KY Academic Standards for Mathematics](#) Domains: CC, OA, NBT, NF, NS, RP, NQ)

| Areas of Concern                       | Problem Indicators<br>(compared to same age peers)                                                                                                                                            | SDI (Evidence- or Research-Based strategies)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**PROCESS: Align goal and potential AREAS OF CONCERNS. Align to PROBLEM INDICATORS. Consider individual student's abilities, select most appropriate SDI suggestions, examine examples and background information before implementing.**

**Sample Goals:**

When given 8 tasks with up to 20 objects, (the student) will count using one to one correspondence with 75% accuracy on 4 out of 5 trials as measured by a teacher developed probe (direct measure) given weekly.

(direct measure) [sample probe](#)

When given 5 word problems, (student name) will correctly set up an equation to solve the problem with 80% accuracy on three consecutive sessions, as measured by a teacher-created probe given weekly.

(indirect measure) [sample probe and recording sheet](#), generated from [https://www.math-drills.com/mathwordproblems/word\\_problems\\_multi-step\\_easy.1493213101.pdf](https://www.math-drills.com/mathwordproblems/word_problems_multi-step_easy.1493213101.pdf)

When given 5 multi-digit (up to 3 digits) addition and subtraction problems requiring regrouping, (student name) will model how to solve the problem using manipulatives or drawings with 80% accuracy in 4 out of 5 weekly sessions, as measured by teacher observation and checklist.

(direct measure) [sample probe](#)

**Process: Align goal and potential AREAS OF CONCERNS. Align to PROBLEM INDICATORS. Consider individual student's abilities, select most appropriate SDI suggestions, examine examples and background information before implementing.**

**Sample Goal:**

When given 10 different times on an analog clock, (student name) will say the time to the minute at 80% accuracy on 4 out of 5 weekly probe sessions.  
(direct measure) [sample probe](#), generated from <https://worksheets.theteacherscorner.net/make-your-own/telling-time/telling-time-worksheet.php>

When given 5 two-dimensional figures, (student name) will classify the figures based on their properties with 80% accuracy on 3 consecutive sessions, as measured by a weekly probe.  
(indirect measure) [sample probe](#), generated from <https://www.commoncoresheets.com/Shapes.php>

When asked to construct a proof of a given geometry problem, (student name) will construct a two-column proof with at least 80% accuracy on four consecutive attempts, as measured by a weekly checklist.  
(indirect measure) [sample checklist](#)
