[3] Waste (WS)

[3.16] Toxic Waste Treatment (WS.5)

Hazardous/Toxic Waste Management Process at the Faculty of Nursing, Sisaket Rajabhat University, Thailand.

Hazardous Waste Treatment

Waste Segregation

Description:

Sisaket Rajabhat University implements a hazardous/toxic waste management process through a systematic collection system and appropriate treatment in accordance with environmental and safety regulations. The university strictly manages waste generated from academic and laboratory activities to ensure proper handling and control.

Toxic waste is managed under a controlled system. Electronic waste is disposed of through a specific procurement method in compliance with government regulations via the university's procurement unit. Laboratory chemicals are treated through specialized hazardous waste management processes. Meanwhile, infectious waste, sharp

waste, and chemical waste are transferred to Sisaket Hospital for proper disposal, with treatment fees paid according to the hospital's established rates.

These practices ensure that all hazardous waste is properly managed, minimizing risks to the environment and human health, and complying with relevant environmental and safety standards.
