Guest Fire Prevention

Campfires: Always check for local fire restrictions at MTfireinfo.org before lighting a campfire.

- Use established campfire ring
- Make sure all logs fit within ring
- NEVER leave campfire unattended
- When done, drown the campfire with water, stir the pit, and drown it again. Repeat until pit is cold to the touch

Trailer Chains: Dragging trailer chains can create sparks causing wildfires.

- Ensure Chains are attached correctly, forming an X beneath trailer hitch
- Chains should be at least 5 inches above pavement.
- If chains are too long, twist until spaced properly.

Smoking: Check local restrictions before smoking outside. During Stage 1 and Stage 2 restrictions smoking is **prohibited** outside of vehicles, buildings and developed recreation sites, unless you are stopped in a 3-foot diameter area cleared of all burnable vegetation.

- Put cigarettes all the way out.
- Never throw smoking materials on the ground or out of a vehicle.

Evacuation Information

Before Evacuation:

- Know at least two evacuation routes. Program your GPS with multiple escape routes.
- Monitor fire weather conditions and local fire activity.
- Stay tuned to your TV or local radio stations for updates or check the appropriate websites.
- Evacuate as soon as you are aware of a possible threat to the rental or your evacuation route—do not wait for emergency notifications.

WHEN PREPARING TO EVACUATE – ALWAYS:

- Keep your cell phone fully charged.
- Bring your luggage and all other belongings - assume you will not be able to return.
- Carry car keys, wallet, ID, cell phone, and spare batteries.
- Drink plenty of water to stay hydrated.
- Locate your pets and place them in carriers early.

IF TIME ALLOWS:

- Close all windows and doors but leave them unlocked.
- Leave the lights on so firefighters can see the house and other structures under smoky conditions.

FIRE INFORMATION RESOURCES:

- To view current fire activity, visit mtfireinfo.org
- NOAA Weather Radio provides local weather and emergency updates. Find your station here: https://www.weather.gov/nwr/stations?State=MT
- **Call 911 to report a wildfire**

Evacuation Map

When creating an evacuation map, be sure to include at least two evacuation routes, reference points, a scale and a compass rose. Evacuation routes should provide destinations that guests can route their GPS to. Appropriate destinations may be nearby towns or cities where hotels and wildfire aid may be located. If you are in a remote location and there is only one town nearby, alternative routes should be provided in order to allow for differing evacuation directions.
