

Find A Gene!

For this lab, you need to do some research to find a *specific* gene that is relevant to a problem you could address with a Genes in Space proposal. If you cannot find one, then find a gene that would be relevant to a different problem that you could address instead ([here](#) is a database that may or may not be useful).

1. Write 3 - 5 complete sentences describing what is known about your gene. What you write should reference an experiment that has used that gene. Cite your source and provide a link.
2. Write 2 - 3 complete sentences describing the science question that could be investigated by testing the expression of that gene. (Hopefully, this is at least somewhat related to the original problem you set out to address, but it does not have to be.)
