Help!   I can't open my Yahoo Mail…CSU Mentor…Turn It In.
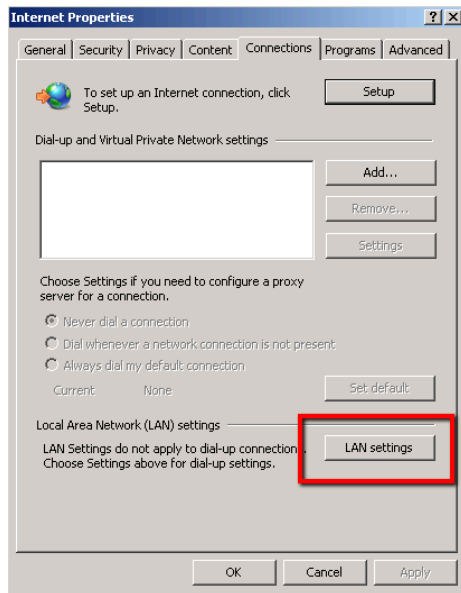

Here's the solution for Google Chrome

Use the wrench or menu symbols to open the SETTINGS Tab. Scroll to the bottom of the page and open Show Advanced Settings. The 9th option down the page will be to change the Network Proxy Settings
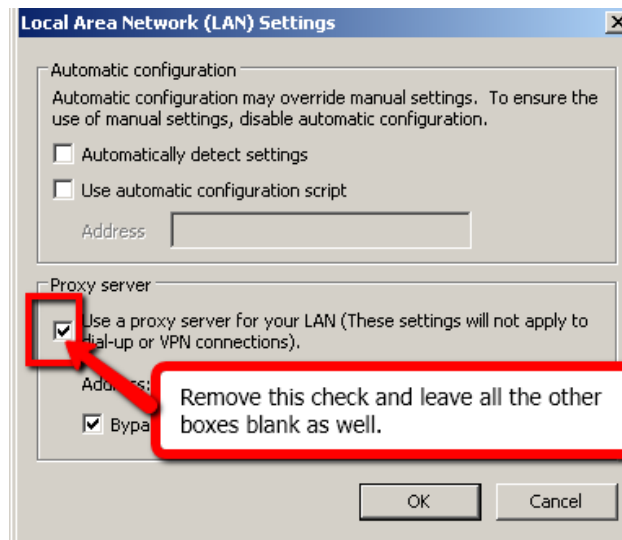

Network

Google Chrome is using your computer's system proxy settings to connect to the network.

Change proxy settings...

This opens up a window that looks like this.

Click on LAN settings and uncheck the box with the check mark.

Remove this check and leave all the other boxes blank as well.

Click OK on both screens then return to the page   you were trying to access.

The site's security certificate is not trusted!

You attempted to reach **library.musd.org.**, but the server presented a certificate issued by an entity that is not trusted by your computer's operating system. This may mean that the server has generated its own security credentials, which Google Chrome cannot rely on for identity information, or an attacker may be trying to intercept your communications.

You should not proceed, **especially** if you have never seen this warning before for this site.

Proceed anyway   Back to safety

▶ Help me understand

You may ignore this warning message and proceed to the site.

For Internet Explorer, use the Tools menu to select Internet Options and open the tab for Connections

then follow the directions above. Firefox use the Tools and Options menu, Network tab and

Connections settings and uncheck any boxes..
