What I think I know

What is a natural hazard?

- Like a natural disaster
- Knocking down a house
- Nest of crocodiles → not man-made, a hazard
- Tornadoes, hurricanes, earthquake, lightning-strikes, tsunamis, blizzards, forest fires, sink-holes, tar, fire-tornado, quicksand
- Sickesses - COVID-19 (started w/ animals)
- Come from the Earth, made by nature
- Earthquake makes a tsunami → plates shift
- Rise in animal populations → throwing off the ecosystem

What types of processes cause destruction?

- Caterpillar eating leaves destroys leaves
- Earth's plates moving
- Things that can cause natural hazards - tornadoes on land/water (typhoon?)
- Global warming → ice breaking
- Pollution
- Parasites
- Humans - we are natural animals
- Magnetic plates crashing into each other → causes earthquakes & tsunamis

How does society prevent and/or reduce damage caused by natural hazards/disasters?

- Bunkers (tornadoes, hurricanes, tsunamis)
- Radiation suits
- Blockades & blockades cones (earthquakes)
- Recycling reduces hazards from pollution
- Putting out campfires after use
- Put sand around your house
- Coral reefs prevent tsunamis
- Build a wall around the city (floods/tsunamis)
- Build a dam
- Going underground
