Page number 2 of a Report by the World Organisation for Animal Health (WOAH)

$\ensuremath{^{7}}$. What are the clinical signs of LSD?

The morbidity rates for LSD during outbreaks vary between 10 and 20% although it has been reported in some places to be as high as 45%, and mortality rates of 1 to 5% are considered usual. LSD does not cause chronic disease. It does not exhibit latency, and recrudescence of disease does not occur.
