

Page number 2 of a [Report](#) by the World Organisation for Animal Health (WOAH)

7. What are the clinical signs of LSD?

The morbidity rates for LSD during outbreaks vary between 10 and 20% although it has been reported in some places to be as high as 45%, and **mortality rates of 1 to 5%** are considered usual. **LSD does not cause chronic disease**. It does not exhibit latency, and recrudescence of disease does not occur.
