

What is LearnZillion?

LearnZillion is the online platform that our middle and high schools use to access the Illustrative Mathematics curriculum.

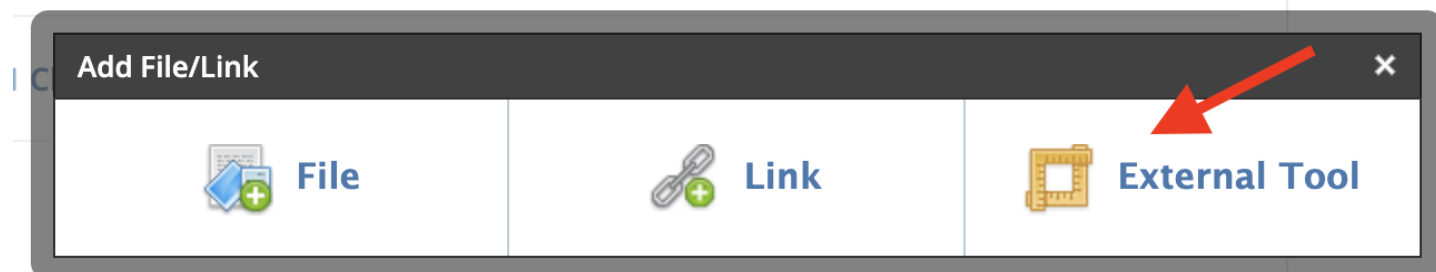

Who has access to LearnZillion?

All middle and high school math students and teachers.

How do I create a LearnZillion assessment in Schoology (with grade passback)?

To create an assignment in Schoology that takes students directly to an activity in LearnZillion AND passes student scores from LearnZillion back to Schoology, follow [this guide](#) or [this video \(start at 1:00\)](#). If you've linked your sections in Schoology, make sure to select all sections in LZ when creating the link, and it will work for all linked sections.

If you want student scores to passback from LearnZillion to Schoology, you must set it up this way and students must access the assignment in your Schoology course. Find detailed instructions from LearnZillion [here](#) for customizing content and assigning digital cooldowns and digital applets.

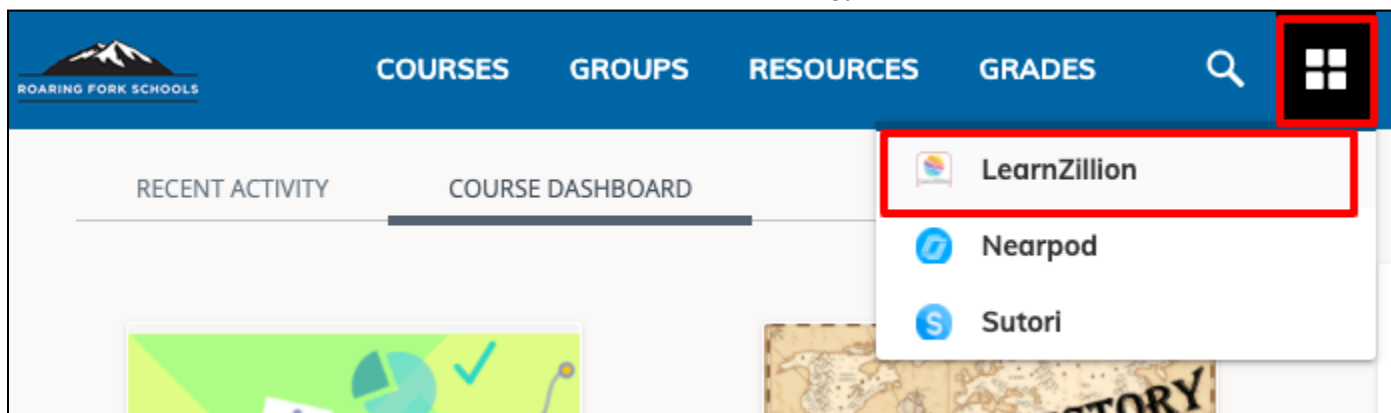

How do teachers and students login to LearnZillion?

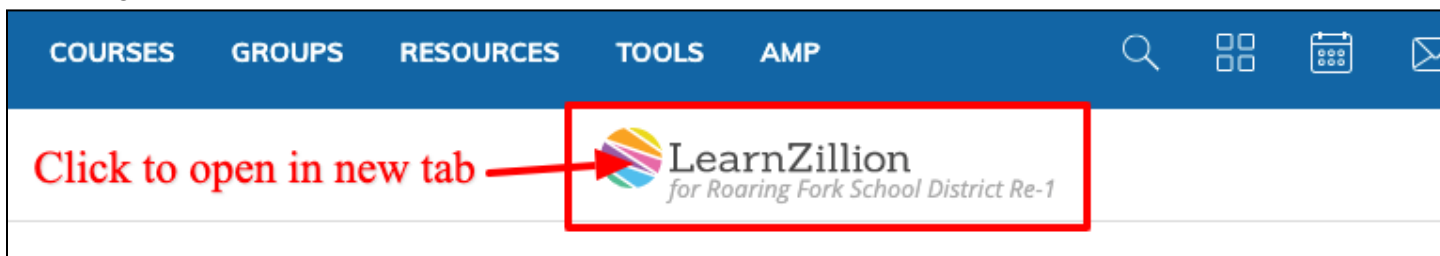

All math students and teachers are automatically rostered through Clever, so you never have to create an account or set up classes. To login, you have three options and you are free to use the option that works best for you, or use different options at different times. It does not matter which of these methods you use to login; you'll get to the same place!

Option 1: Schoology

While logged into rfschools.schoology.com as usual, click on the App Center icon on the top menu bar, then select LearnZillion. This will load LearnZillion within the Schoology frame.

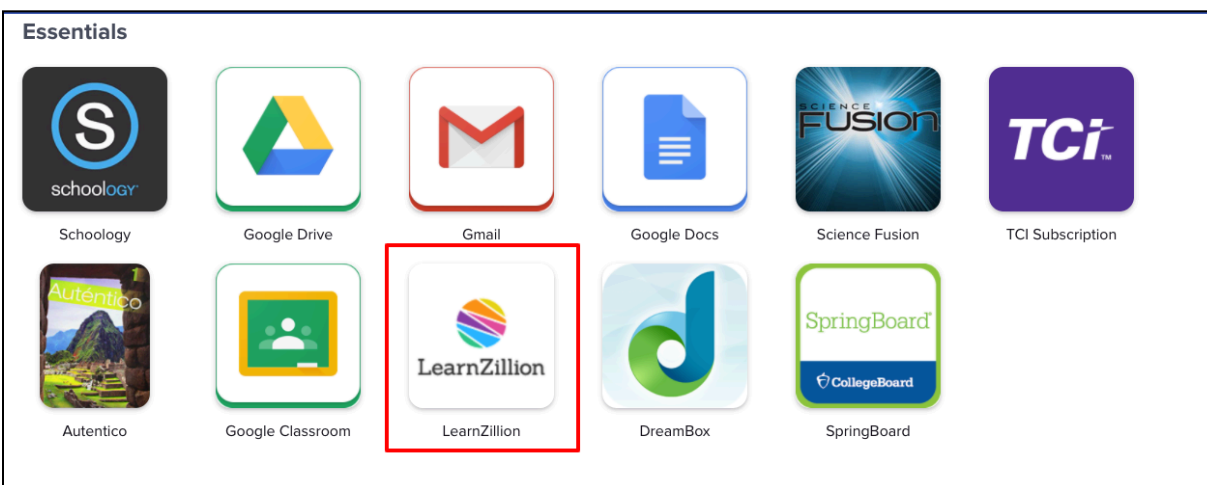

To load LearnZillion in a new tab outside of the Schoology framework, click on the LearnZillion logo at the top of the page.

Troubleshooting: If students are on their own Mac computers and are having trouble accessing LearnZillion in Schoology, they need to use the Chrome browser and fully separate their personal Google accounts from their school accounts in Chrome by setting up separate profiles. Here's a [video](#) and [document](#) showing how to. Alternatively, students can login to LearnZillion via [Clever](#) from any device (see below).

Option 2: Clever

Go to <https://clever.com/in/rfsd/> and login with your rfschools Google account. Click on the LearnZillion icon to login.

Option 3: LearnZillion website

Go to rfschools.learnzillion.com, click Teacher or Student, then Login with Clever. You may be redirected to the Clever login page if you were not already logged in. Select your rfschools Google account if prompted. If you hit an error message, try [clearing your cookies](#) and trying again.
