

# Plex Guide for Anime

By /u/JewJewJubes / JewJubes#1121

Objective: Build a Plex Media Server to automatically download, sort, organize, and monitor your Anime collection and access through Plex.

slowly Working on a Linux/Docker Guide ☹️

Shortcut : <https://plex.lumiseterne.cc/>

## Brief Overview

[Torrent](#) - A file shared through a Peer To Peer network.

[qBittorrent](#) - a free and open-source BitTorrent client. Used for downloading torrents.

[Sonarr](#) - a PVR for Usenet and BitTorrent users. It automatically monitors & downloads shows/episodes.

[Radarr](#) – A fork of Sonarr. Used to automatically monitor & download Movies.

Plex Guide for Anime

[Jackett](#) – a 'BitTorrent indexer' service that can be configured to run with Sonarr and/or Radarr.

[Plex Media Server](#) – a digital media player and organizational tool that allows you to access your media in one place.

[VPN](#) – Creates a secure tunnel to another computer over the internet.

### Is this guide a lot of work?

Not Really. It takes some time to get set up. However, It's a very easy system to maintain in the long run. As well, high quality torrenting will beat the quality of streaming sites 100% of the time.

**\*This guide is for Windows 10**

**\*We are not using Docker**

**\*I DO NOT ENDORSE ANY PIRATED or ILLEGAL CONTENT. SUPPORT THE ANIME INDUSTRY BY PURCHASING GOODS OR LEGALS STREAMS**

**\*Everything in this guide is open source or will denote when it is a paid service/product**

**\*The Computer hosting Plex is required to be on for Plex to work.**

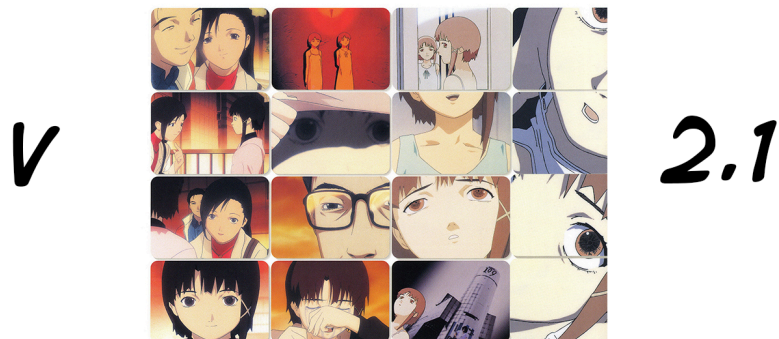

**Plex Media Server will prevent your computer from sleeping by default.**

## Video Guide

This guide is available in a video format as well to compliment this guide.

## This Guide is Best Viewed with Print Layout Disabled & Show Document Outline Enabled

### Prerequisites:

Non-exhaustive list of terminology that'll be referred to numerous times throughout this guide.

### Understanding BitTorrent Terminology

- [Understanding BitTorrent \(Linus\)](#)
- [The Basics of Torrenting \(Mental Outlaw\)](#)
- [Wikipedia- BitTorrent](#)
- [Glossary of BitTorrent Terms](#)
- [Pirated Movie Release Types](#)
- [Brian's BitTorrent Guide \(Old\)](#)

### Understanding Network Terminology

- [What is an IP Address? \(Article\)](#) [Wikipedia](#)
- [What is a Port? \(Article\)](#) [Wikipedia](#)
- [What is Port Forwarding? \(Article\)](#) [Wikipedia](#)

## Understanding Computer Terminology

[Hardlinks](#) & [How do I view a file's hard links in Windows?](#)  
[Computer and Internet Terms](#)

## Understanding Plex

[What is Plex?](#)

Plex is a popular media center software. That consists of two main components. First, you have the Plex Media Server, which sorts your media files and makes them streamable through different players. Then there's the Plex Media Player client that allows you to stream all your media content to your preferred devices.

## Is Plex suddenly not working?

Check the status page to see if they're encountering any issues.  
<https://status.plex.tv/>

## Free AND/OR Open Source Alternatives

[Emby](#), [Kodi](#) & [Jellyfin](#)

[Comparison between Plex, Emby, Jellyfin & Kodi](#)

## Hardware

A Computer is necessary see :

[Plex Media Server Requirements](#)

[What kind of CPU do I need for my server?](#)

[r/Plex - Build Help Flair](#) & [Serverbuilds.net](#)

[Am I using a 32-bit or a 64-bit version of Windows?](#)

Something not working?

[See Tech Support](#)

also if ur interested in contributing hmu.

## Nyaa Proxies

All Nyaa Proxies appear to be down.

Try Animetosho or [VPNs](#) or [See here for recommendations](#)

# qBittorrent

**I'll be using qBittorrent as my torrent client.**

A BitTorrent client enables a user to exchange data as a peer in one or more swarms

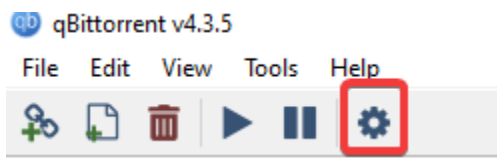

[There are other Torrent Clients.](#) I prefer using qBittorrent. It's lightweight, easy to use and very popular among Windows users.

[qBittorrent Wiki](#)

[Download & Install qBittorrent](#)

## Settings

Open qBittorrent. Navigate to the top bar. Select the Cog Icon. To enter the settings menu.

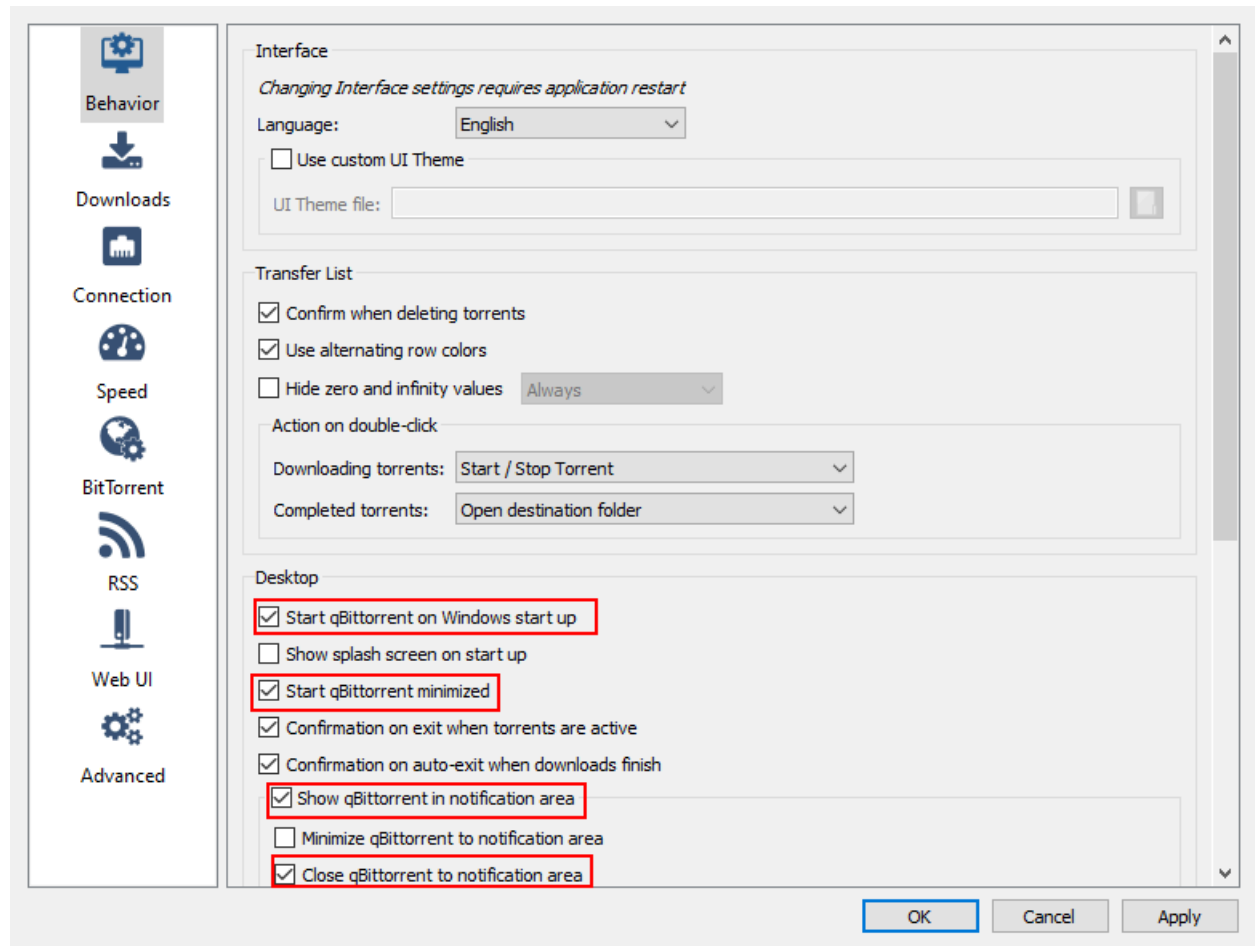

## Behavior

General Desktop behavior.

Start qBittorrent when Windows startup is recommended. To automatically start seeding upon bootup. The rest of the settings are optional.

## Plex Guide for Anime

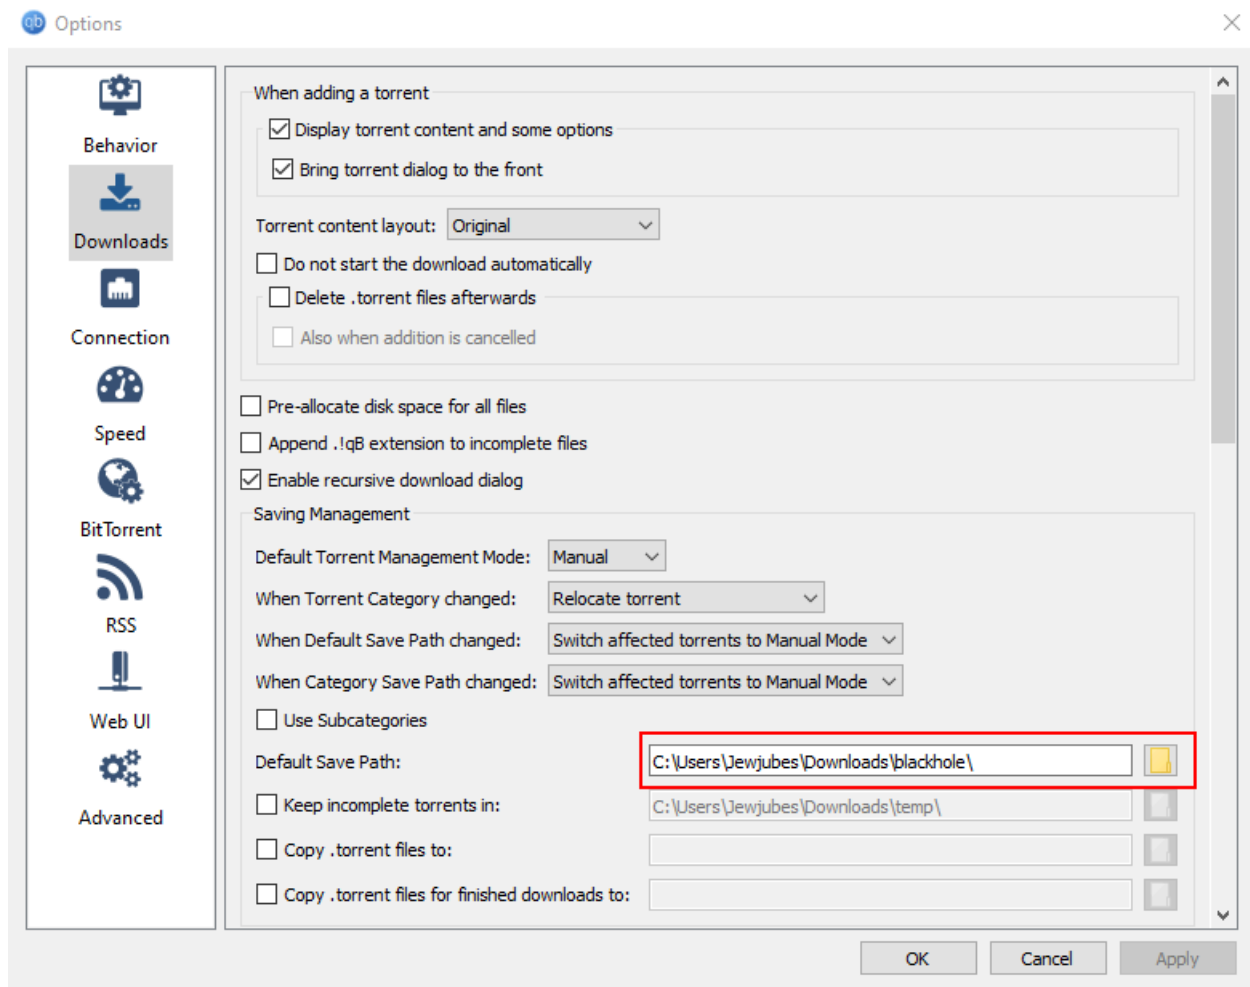

## Downloads

Create a folder to dump your torrents into.

\*Be sure to use the disk for your torrents & TV/Movie Imports. Otherwise the hard links won't work

## Plex Guide for Anime

## Connections

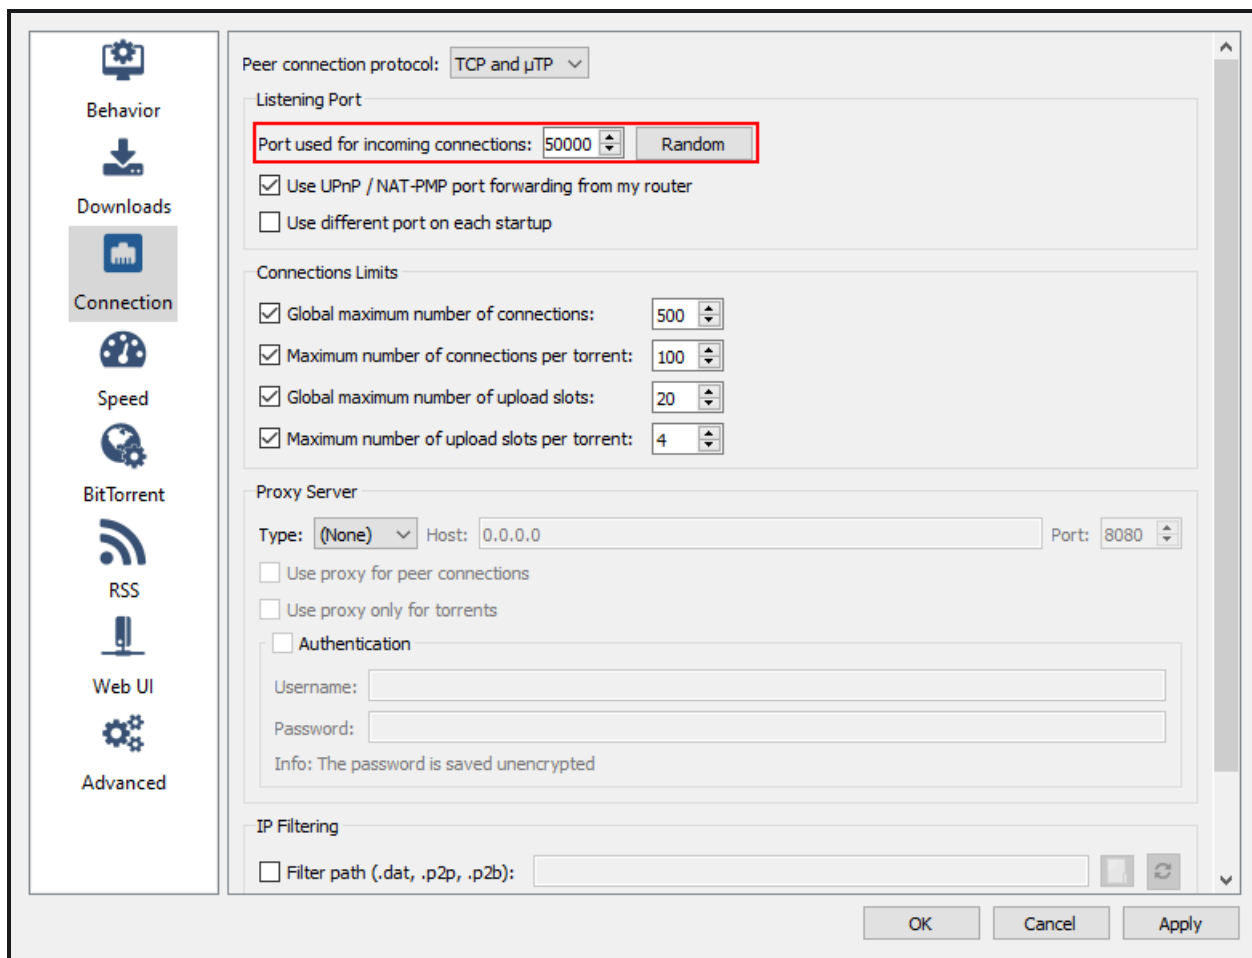

It is generally acceptable to leave the Listening Port on Default.

However, if you're experiencing slow downloads. You can change the Listening port. The safest choice is a port in the 49152–65535 range as this will avoid ISP blocks and possible conflicts with other applications. [See Ephemeral Ports](#)

Check that you're connectable by entering in the Port on [Canyouseeme.org](#)  
qBittorrent may require you to manually open the listening port to connect to other peers.  
If you're unsure on how to open a port. Search for your router on <https://portforward.com>

If you have physical access to the router, you can usually find the model information on a sticker on the bottom or back of the router. [You can also check it through the command prompt](#)

## Plex Guide for Anime

## Speed

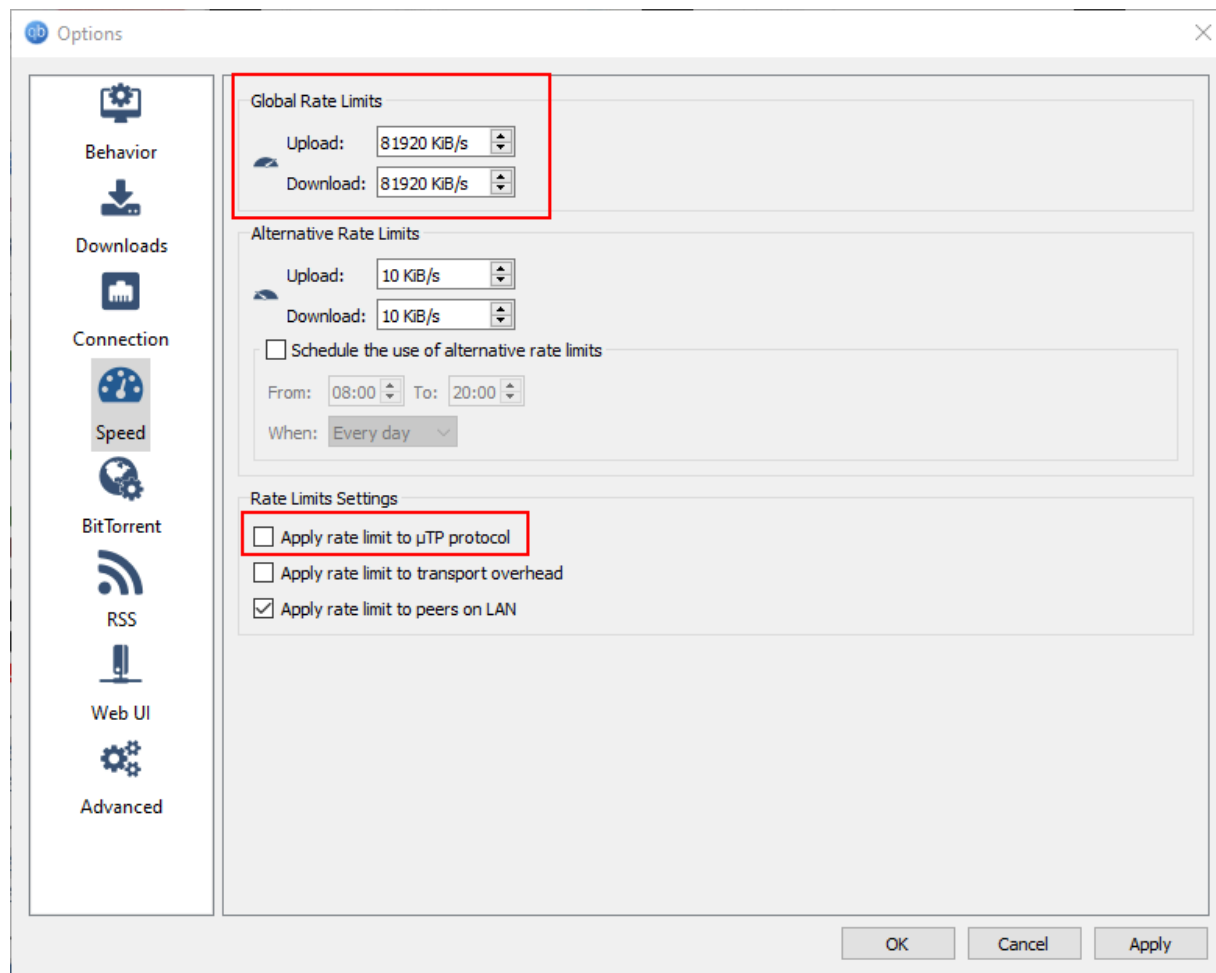

If you're sharing your internet with others. It's courteous to not use up all the available bandwidth.

<https://www.speedtest.net/> to kbps Set to 80% of Download & Upload.

## Plex Guide for Anime

Also learn the difference “KiB” vs “KB” vs “kB” vs “Kb” vs KB vs kB

[Disabling “Apply rate limit to μTP Protocol” may help with speeds.](#)

## BitTorrent

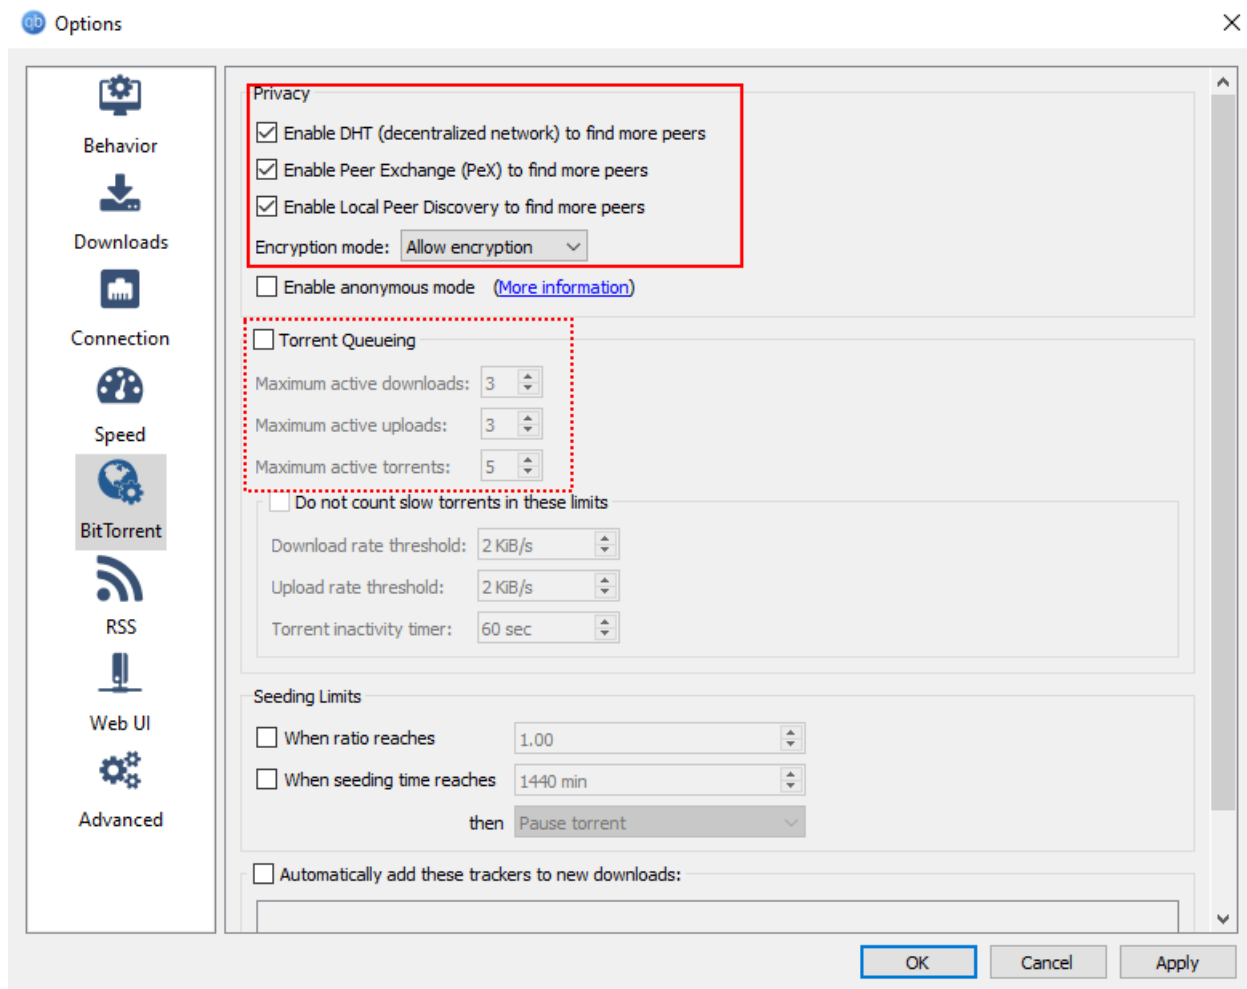

Enable [DHT](#) & [PeX](#) & [LPD](#)

(Peer Exchange) PeX & (Distributed Hash Table) DHT will help download speeds. As they will help you find additional seeds, and peers for a torrent. (Local Peer Discovery) LPD, will search for peers on your ISP

It will be turned off automatically if using Private Torrents.

Consider Torrenting Queueing as well, if on a shared internet connection. It simply limits the amount of torrents that can be active at a given time.

## Plex Guide for Anime

### RSS

Not needed. We'll be using [Sonarr](#) instead.

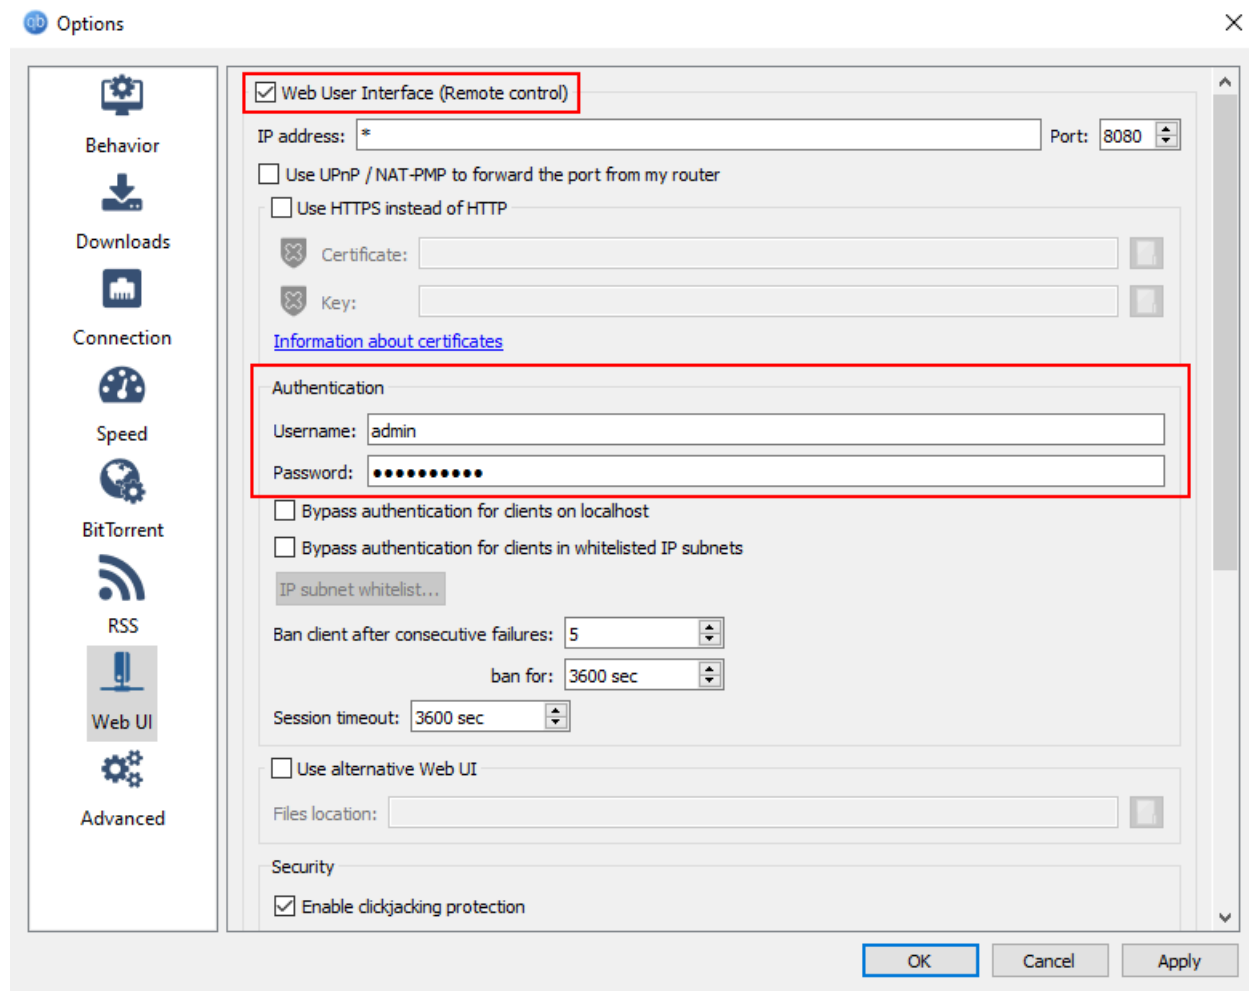

### Web UI

Enable Web User Interface

Create credentials for the account.

Remember the authentication credentials. It'll be needed later when connecting a torrent client to [Sonarr](#) & [Radarr](#).

## Plex Guide for Anime

## Sonarr

Sonarr will automate downloading Anime Shows from Torrent indexes.

**Be sure to add a Username and Password to Sonarr. To avoid having unwanted users accessing your Sonarr from the internet.**

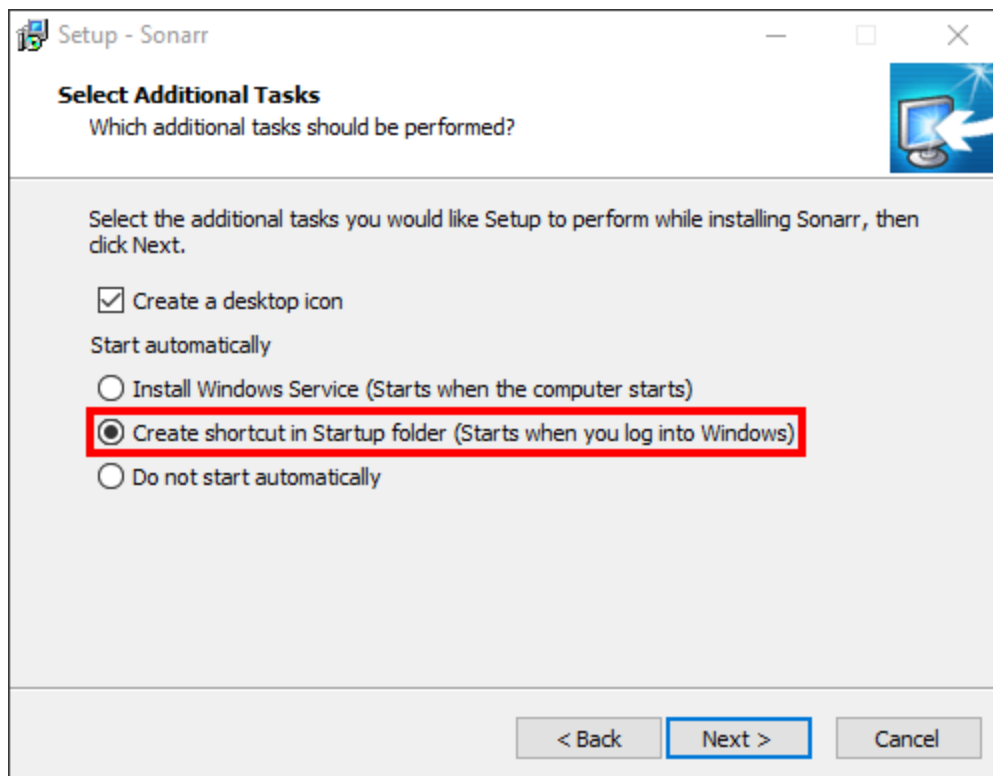

[Sonarr Wiki](#)

[Download & Install Sonarr Here](#)

Select Create Shortcut in Startup Folder  
or Install Windows Service.

[What's the difference?](#)

## Plex Guide for Anime

## Settings

Open Sonarr.

This can be done through your Web Browser. By typing into your browser's address bar [localhost:8989](http://localhost:8989) or [127.0.0.1:8989](http://127.0.0.1:8989) (IPADDRESS):[PORT]

Or opening Sonarr through the System Tray.

REMEMBER TO ENABLE "SHOW ADVANCED"

## Media Management

Enable Renaming Episodes.

It'll make Plex's job much easier.

[We'll be using TRaSH-Guides Media Management naming scheme](#)

Anime Episode Format

```
{Series TitleYear} - S{season:00}E{episode:00} - {absolute:000} - {Episode  
CleanTitle} [{Preferred Words }{Quality Full}][[MediaInfo  
VideoDynamicRange]][[MediaInfo VideoBitDepth}bit][[MediaInfo
```

## Plex Guide for Anime

```
VideoCodec]][{MediaInfo AudioCodec} { MediaInfo AudioChannels}]{MediaInfo AudioLanguages}{-Release Group}
```

### Episode Naming

**Rename Episodes**  Sonarr will use the existing file name if renaming is disabled

**Replace Illegal Characters**  Replace illegal characters. If unchecked, Sonarr will remove them instead

**Standard Episode Format**  ?  
Single Episode: The Series Title! - S01E01 - Episode Title (1) HDTV-720p Proper  
Multi Episode: The Series Title! - S01E01-E02-E03 - Episode Title HDTV-720p Proper

**Daily Episode Format**  ?  
Example: The Series Title! - 2013-10-30 - Episode Title (1) HDTV-720p Proper

**Anime Episode Format**  ?  
Single Episode: The Series Title! (2010) - S01E01 - 001 - Episode Title 1 [INTERNAL HDTV-720p v2][HDR][10bit][x264][DTS 5.1][JA]-RlsGrp  
Multi Episode: The Series Title! (2010) - S01E01-E02-E03 - 001-002-003 - Episode Title [INTERNAL HDTV-720p v2][HDR][10bit][x264][DTS 5.1][JA]-RlsGrp

### Series Folder Format

```
{Series TitleTheYear} [tvdb-{TvdbId}]
```

### Multiple-Episode Style

#### Scene

**Series Folder Format**  ?  
Used when adding a new series or moving series via the series editor  
Example: Series Title!, The (2010) [tvdb-12345]

**Season Folder Format**  ?  
Example: Season 01

**Specials Folder Format**  ?  
Example: Specials

**Multi-Episode Style**  S01E01-E02-E03 ▼

# Plex Guide for Anime

## Folders

Optional. I prefer to delete empties.

### Folders

**Create empty series folders**  Create missing series folders during disk scan

**Delete empty folders**  Delete empty series and season folders during disk scan and when episode files are deleted

## Root Folders

Scroll down. Add a root folder for your Anime-TV

Path	Free Space	Unmapped Folders
<a href="#">Add Root Folder</a>		

Example:

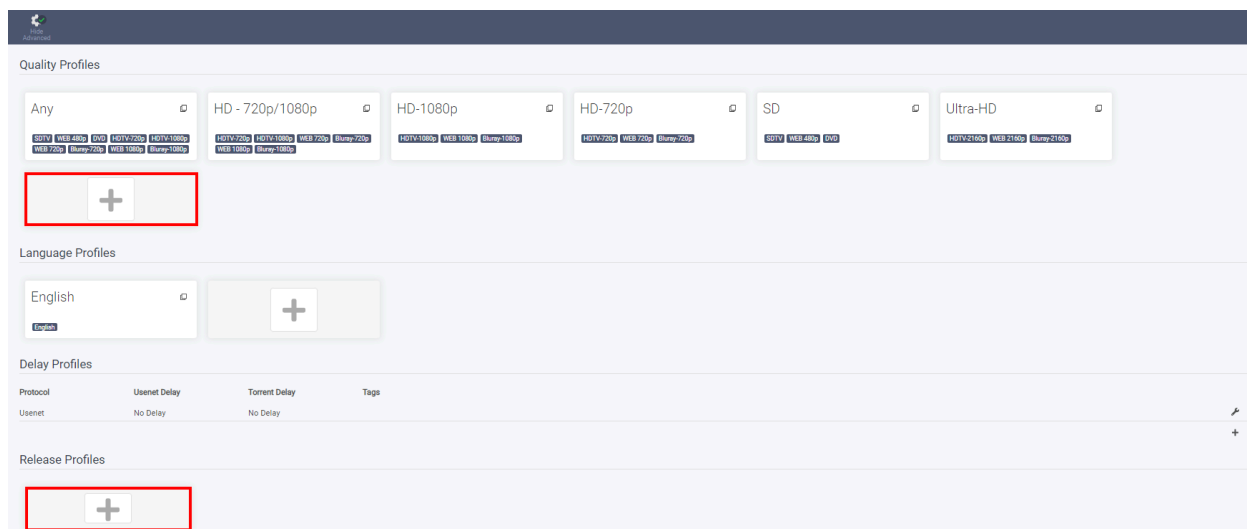

File Browser ✕

Mapped network drives are not available when running as a Windows Service, see the [FAQ](#) for more information.

Type	Name
↑	...

Save.

## Profiles

### Create a Quality Profile

What's the difference between 1080p/720p/480p anime?  
Most anime is produced in a 700p - 900p range.

How do I tell the difference?

Download the 1080/720/480 copies. Take a comparison screenshot. Choose the one you prefer.  
See [Anibin](#) or [Getnative](#)

### I'll be using 1080p

You can also create multiple profiles in different resolutions.

### Quality Profile

Name : Anime Profile 1080p

Upgrades Allowed: Yes

Upgrade Until Quality : Bluray-1080p Remux(**OPTIONAL**) or Anime Combined 1080p

Qualities:Bluray-1080p Remux (**OPTIONAL**)

Combine: Bluray 1080p, WEB-DL 1080p, WEBRip-1080p, HDTV 1080p

Under Qualities. Select "Edit Groups"

# Plex Guide for Anime

### Edit Quality Profile ✕

Name:

Upgrades Allowed:  If disabled qualities will not be upgraded

Upgrade Until:   
Once this quality is reached Sonarr will no longer download episodes

Qualities: Qualities higher in the list are more preferred. Qualities within the same group are equal. Only checked qualities are wanted

- Bluray-2160p Remux
- Bluray-2160p
- WEBDL-2160p
- WEBRip-2160p
- HDTV-2160p
- Bluray-1080p Remux
- Anime Combined 1080p
  - Bluray-1080p
  - WEBDL-1080p
  - WEBRip-1080p
  - HDTV-1080p
- Bluray-720p
- WEBDL-720p
- WEBRip-720p
- Raw-HD
- HDTV-720p
- Bluray-480p
- DVD
- WEBDL-480p
- WEBRip-480p
- SDTV
- Unknown

## [What is a remux?](#)

\*A Bluray Remux is simply the untouched media source (BDMV/DVDiso) losslessly copied into a playable container. It does not necessitate being the best watchable version. They are also very large file sizes.

As well, Bluray Remixes are generally released on the Anime Indexers prior to the Bluray Encodes.

## [The Anime Blu-ray Video Quality Thread](#)

Tl;dr - remuxes are big and often have issues

Looking to see source comparisons? See [Bakashot Comparisons](#)

Save.

## Plex Guide for Anime

### Language Profile

Leaving it on English is fine.

Setting it to “Any” will pick up more results. But may lead to unwanted results being picked up.

### Release Profile

[Servarr Wiki](#) explains it more in depth.

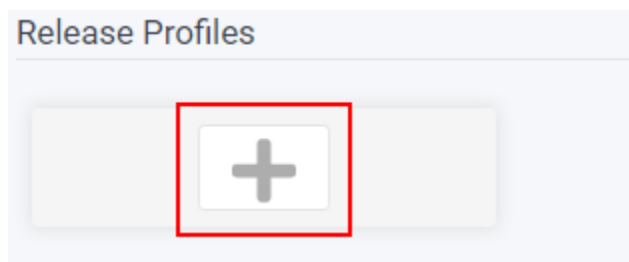

### Seasonal

Further down in [profiles](#).

Create a release profile.

- Must Contain - The release must contain at least one of these terms (case insensitive)
- Must Not Contain - The release will be rejected if it contains one or more of terms (case insensitive)
- Preferred - Here you can select a given term and give it a score.

This is a similar concept to creating a fansub group filter for an RSS Feed.

**For Seasonal Anime. We could set a release profile to use [Subsplease] / [erai-raws] for subs.**

**Or any other release groups you wish to grab.**

**This Profile assumes you'll be manually grabbing completed shows using Seadex.**

These groups don't release BluRays. So we'll always be capped at HDTV-1080

[We can use the TRaSH Guides profile to have Sonarr automatically upgrade our shows when a better quality version is released.](#)

Assign a tag to your release profile.

That way it'll only be used by shows that you assign the tag to. Or else it'll be global (i.e be applied to all shows)

## Edit Release Profile

Name

Enable Profile  Check to enable release profile

Must Contain

The release must contain at least one of these terms (case insensitive)

Must Not Contain

The release will be rejected if it contains one or more of terms (case insensitive)

Preferred 

Term	Score
------	-------

The release will be preferred based on the each term's score (case insensitive)

A positive score will be more preferred

A negative score will be less preferred

Include Preferred when Renaming  Include in {Preferred Words} renaming format

Indexer

Specify what indexer the profile applies to

Using a specific indexer with preferred words can lead to duplicate releases being grabbed

Tags

Release profiles will apply to series at least one matching tag. Leave blank to apply to all series

Delete

Cancel

Save

Save.

## Plex Guide for Anime

### TRaSH Guides Profile

[We can use TRaSH Guides Release Profile Regex for Anime.](#) To further restrict Sonarr's quality control.

TRaSH Guides explains the purpose of each line. To let you decide if you want releases by those groups or not.

Essentially if the description of the section matches your criteria. You'd copy the section line into the Must Not Contain or Preferred Section. Then assign it a score if applicable.

Resulting in a Release Profile that'd look like this.

The Tags Names aren't too important. Just assign it a name. Such as "Trashprofile", "thetrash" or "Profile A", "ProfileB".

If no tag name is assigned. Profile's will be global.

Plex Guide for Anime

And ending up with a final product like this.

# Plex Guide for Anime

## Plex Guide for Anime

And when we search for a series. Sonarr will narrow the results down to the titles that meet the criteria.

A positive score will be more preferred.

A negative score will be less preferred or ignored.

A release with an exclamation mark in a red circle. Will not be downloaded.

This search will take a considerably longer time to complete. As Sonarr has a higher criteria to parse through.

# Plex Guide for Anime

## Plex Guide for Anime

### Dubs Only

We can modify the TRaSH-Guides profile for Dubs.

Simply move the last two lines from the Must Not Contain. Section into the Must Contain. And assign it a tag.

Profile name is optional.

**Name**

**Enable Profile**  Check to enable release profile

**Must Contain**

```
(((funi|eng(lish)?_?dub|\bdub(bed)?\b)/i |   
/((Golumpa|torenter69|KamiFS|KaiDubs)/i |  Add new restricti
```

The release must contain at least one of these terms (case insensitive)

Assign it a tag.

**Tags**

Release profiles will apply to series at least one matching tag. Leave blank to apply to all series

\*I've only tested it limitedly but it seems to work.

### r/AnimePiracy Sonarr Regex

<https://bin.piracy.moe/?b584a85ea3a37590#869vqXUeSQ9KMNw2mHYBYVNoVDykv8iPSwa9dM2UXzRa>

Improved matching from Trash Guides Regex

### Quality

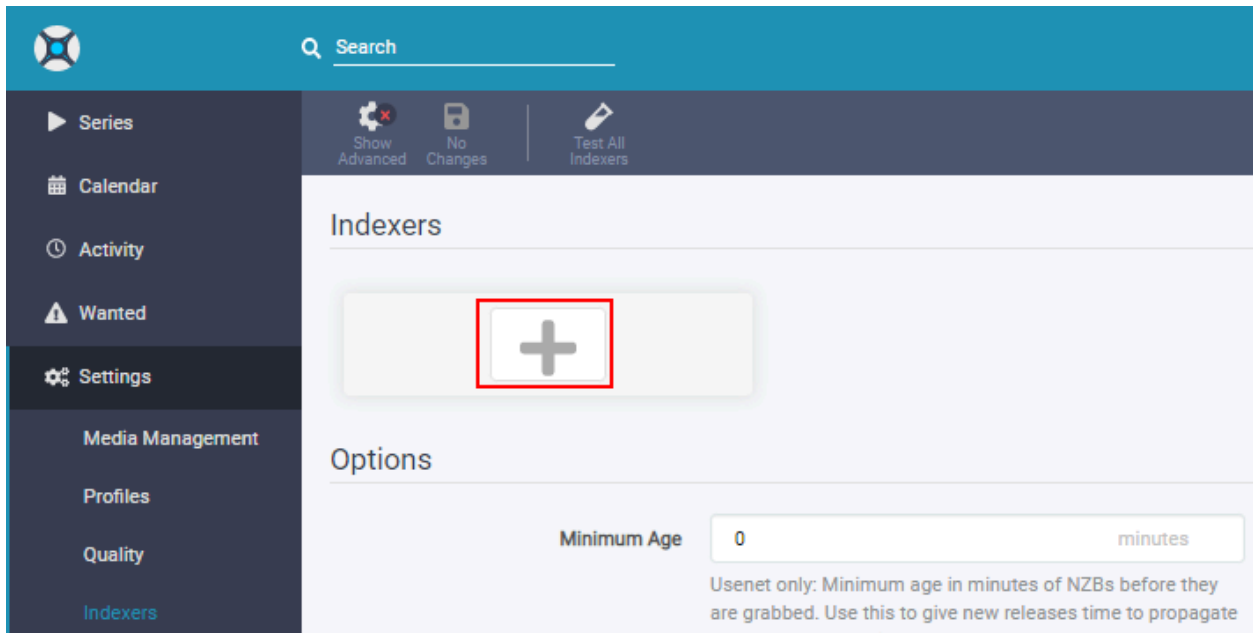

I personally leave it alone.

## Plex Guide for Anime

[TRaSH Guides has a guide if interested. It goes in depth of how to set up Sonarr to use the perfect quality settings.](#)

## Indexers

We can add our Nyaa indexer natively through Sonarr.  
[However it's better to use Jackett to add our Indexer.](#)

## Jackett Or Prowlarr Setup

[We'll be taking a detour to set up Jackett or Prowlarr to connect to our Indexer.](#)

Settings > Add Indexer > Torznab

# Plex Guide for Anime

Add Indexer

Sonarr supports any indexer that uses the Newznab standard, as well as other indexers listed below.  
For more information on the individual indexers, click on the info buttons.

## Usenet

Fanzub <a href="#">More info</a>	Newznab <a href="#">Custom</a> <a href="#">Presets ▾</a> <a href="#">More info</a>	omgwtfnzbs <a href="#">More info</a>

Anime Categories

Drop down list, leave blank to disable anime

Additional Parameters

Additional Newznab parameters

Minimum Seeders

Minimum number of seeders required.

Seed Ratio

The ratio a torrent should reach before stopping, empty is download client's default

Seed Time  minutes

The time a torrent should be seeded before stopping, empty is download client's default

Season-Pack Seed Time  minutes

## Plex Guide for Anime

If you're missing "Additional Parameters" You need to enable "Show Advanced"

Test then save.

## Download Clients

Click the + Symbol.

And Select qBittorrent

The screenshot shows the Plex web interface. The sidebar on the left contains navigation items: Series, Calendar, Activity, Wanted, Settings, Media Management, Profiles, Quality, Indexers, Download Clients, Import Lists, Connect, Metadata, Tags, General, UI, and System. The main content area is titled "Download Clients" and features a large "+ Add Client" button highlighted with a red box. Below this are sections for "Completed Download Handling" and "Failed Download Handling", each with "Enable" and "Remove" options and checkboxes. The "Remote Path Mappings" section is partially visible at the bottom, showing a table with columns for Host, Remote Path, and Local Path.

Host: localhost (or 127.0.0.1 or the Private IP Address)

Port: 8080

Username & Password: (Refer back to [Web UI](#))

Category : Anime

### Add Download Client - qBittorrent

Name

Enable

Host

Port

Use SSL  Use a secure connection. See Options -> Web UI -> 'Use HTTPS instead of HTTP' in qBittorrent.

Url Base   
Adds a prefix to the qBittorrent url, e.g. http://[host]:[port]/[urlBase]/api

Username

Password

Category

Adding a category specific to Sonarr avoids conflicts with unrelated downloads, but it's optional

Post-Import Category   
Category for Sonarr to set after it has imported the download. Sonarr will not remove the torrent if seeding has finished. Leave blank to keep same category.

Forgot your credentials?

### Organize & Rename

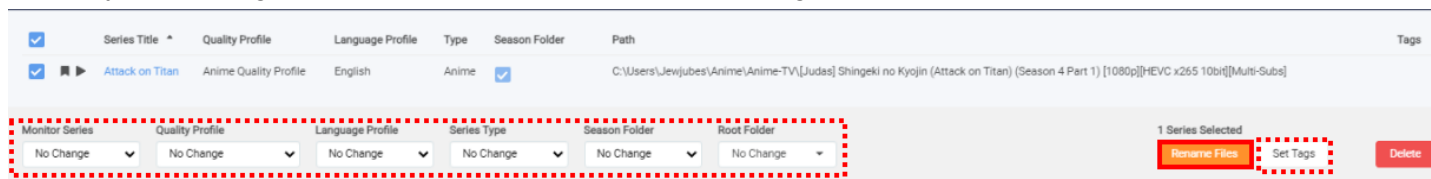

Click Organize & Rename and select Organize once ready to rename.

## Plex Guide for Anime

## Mass Editor

Can be used to change Monitor Status, Quality Profile, Language Profile, Series Type, Season Folder (y/n), Set Tags, Delete?. Select Rename files for changes to take effect.

## Automatic / Interactive Search

Sonarr can either search automatically or interactively (Manually)

1 (60)

The Other Side of the Sea

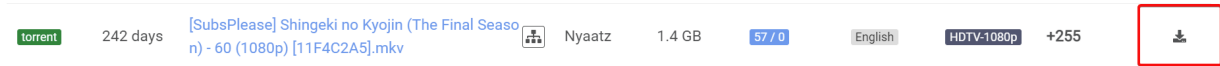

Dec 6 2020

Interactive Search per episode/season can be triggered with the Person Icon (Outlined in black)

Automatic Search per episode/season can be triggered with the Magnifying Glass icon (Outlined in red)

## Plex Guide for Anime

Once you've manually found the release you want. Click the download icon.

## Seadex & Sonarr

[A Certain Smoke's Index / Seadex / Sneedex](#)  
[A Certain Fansubber's Index](#)

If wanting to manually select the *best* quality release per show. You can check out [Seadex, for the best visuals](#). Or [Certain Fansubber's index](#). It can be checked against [Sonarr's interactive search](#), and have Sonarr manually grab that release. Or downloaded independently and [manually imported into Sonarr](#). That way you'll have the best release of the show. And Sonarr will rename the show to be compatible with Plex.

Or just point them directly to Plex.

[Alternatively could manually create hardlinks with a Link Shell Extension](#). And [Manually Import them into Sonarr](#). Or leave them,

May have to break the file structure of the torrent. Depending on its structure or naming schemes. Included extras may cause issues such as (ex. PVs, OP/EDs, SP, Movies, OVAs). YMMV.

## Sonarr and Nyaa fucky wucky

Source	Age	Title	Indexer	Size	Peers	Language	Quality			
torrent	804 days	[KH] Date A Live S1+S2+S3+OVAs+Movie (BD 1080p) [Dual-Audio]	Nyaa.si (Prowlarr)	45 GB	23 / 9	English	Bluray-1080p	+4106		

📁	Date A Live	2022-01-02 2:19 PM	File folder
📁	Date A Live II	2022-01-02 2:19 PM	File folder
📁	Date A Live III	2022-01-02 2:19 PM	File folder
📁	Movie	2022-01-02 2:19 PM	File folder
📁	OST	2022-01-02 2:19 PM	File folder

Uploaders on Nyaa sometimes release batch releases. Which Sonarr doesn't really handle. In which case it's easiest to create [hardlinks](#). From our torrent directory to our Anime directory.

## Plex Guide for Anime

```
PS Z:\Media\Anime\Anime\Date a Live (2013) [tvdb-264663]> tree

Z: .
├── Season 1
│   └── NC
├── Season 2
│   └── NC
└── Season 3
    └── NC
```

Which would look like so.

And can be [manually imported](#) in Sonarr as well.

## Radarr

[Radarr Wiki](#)

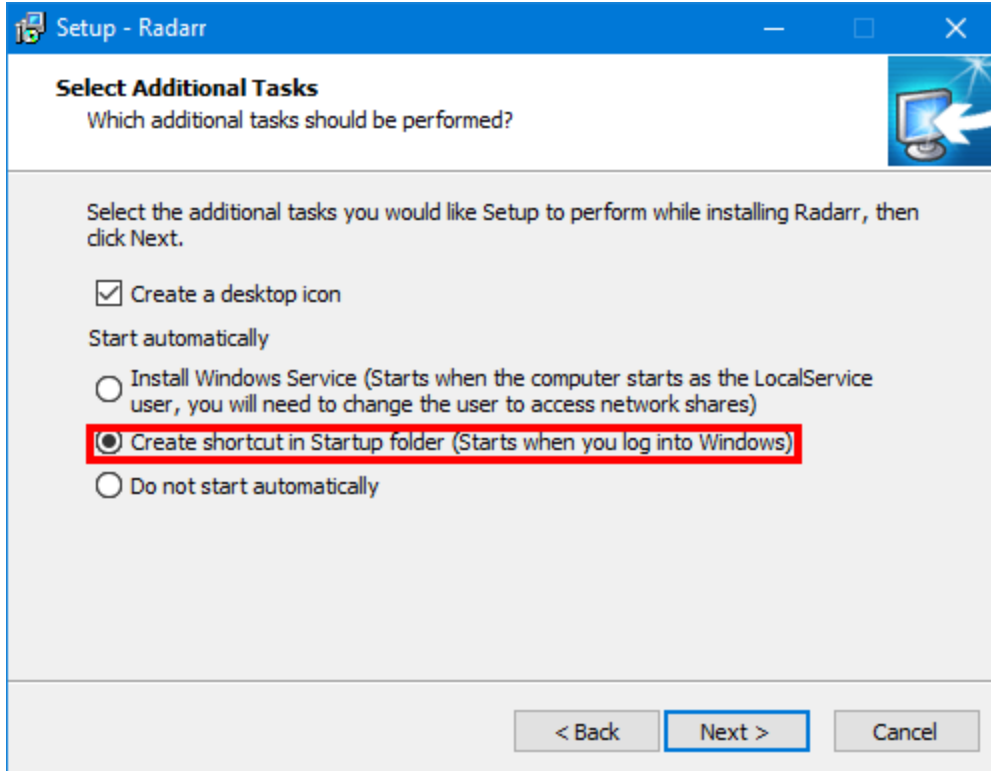

[Download & Install Radarr.](#)

The setup is very similar to Sonarr. Thus a lot of settings are the same.  
Radarr is kinda shit for Anime.

Select Create shortcut in Startup Folder

## Plex Guide for Anime

Open Radarr.

This can be done through your Web Browser. By typing into your browser's address bar [localhost:7878](http://localhost:7878) or [127.0.0.1:7878](http://127.0.0.1:7878) (IPADDRESS):[PORT]

Or opening Radarr through the System Tray.

## Settings

Similar settings to [Sonarr](#)

## Media Management

Select Rename Movies

### Standard Movie Format

Quality Profile Anime Quality Profile

Tags

Start search for missing movie  Add Movie

[If you're wanting to manually select the best quality of a Movie. Check out using Sonarr & Seadex.](#) Apply the same logic to Radarr.

## Road block

Anime naming conventions and Radarr don't play nicely.

One of the reasons is that Radarr depends on the year to be able to map the movie to it's correct title.

## Plex Guide for Anime

Uploaders on Nyaa often omit the year of the movie from their title.

Example

[FanSub] Bunny Girl Movie.mkv - Wouldn't get found

[FanSub][ Bunny Girl Senpai Movie [BD 1080p][HEVC x265 10bit][Eng-Subs] - Wouldn't Get Found

[FanSub] Rascal Does Not Dream of a Dreaming Girl-Movie (2019) [BDRip] [1080p Hi10P AAC]

Would be found. As the year of the title is correct.

Movie.Title.Year.All.The.Rest-Rest.mkv

Or sometimes radarr just says "fuck you"

## Import Existing Movie

### Library Import

Same process as Sonarr. Just with Movies.

The screenshot shows the Radarr web interface. The top navigation bar includes a search bar and icons for Update All, RSS Sync, Search All, Manual Import, and Movie Editor. The left sidebar contains navigation options: Add New, Library Import, Discover, Calendar, Activity, Settings, and System. The main content area displays the message "No movies found, to get started you'll want to add a new movie or import some existing ones." with two buttons: "Import Existing Movies" (highlighted with a red box) and "Add New Movie". Below this is the "Recent Folders" section, which lists two paths: "C:\Users\Jewjubes\Anime\Anime-Movies" and "C:\Users\Jewjubes\Downloads\blackhole", with a "Choose Another Folder" button. At the bottom, there is a table of movie entries with columns for Folder, Movie, Monitor, Min Availability, and Quality Profile. The third row is highlighted with a red box and contains the entry: "Rascal Does Not Dream of a Dreaming Girl (2019) [BDRip] [1080p Hi10P AAC]".

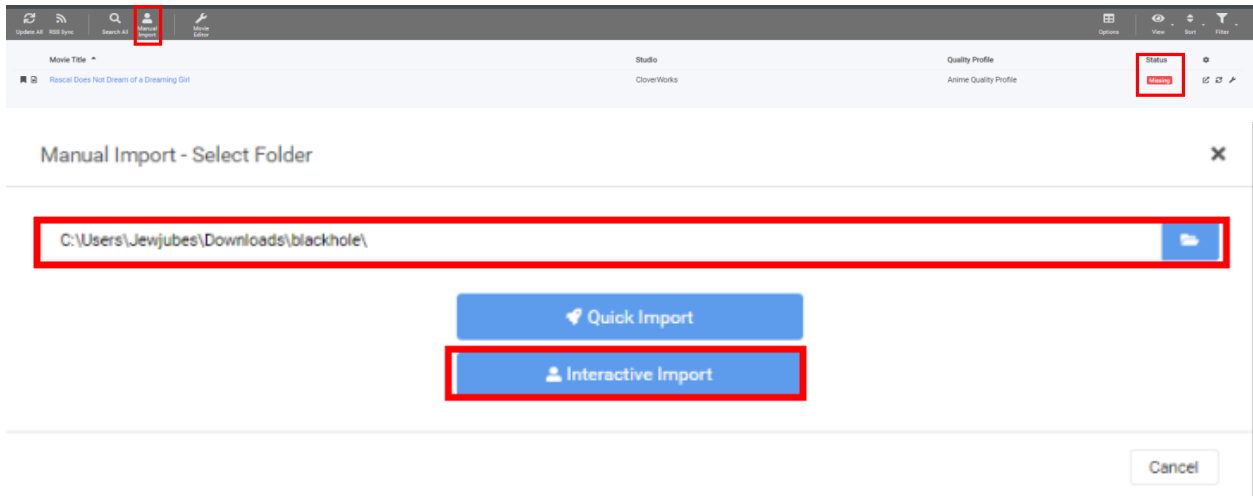

Folder	Movie	Monitor	Min Availability	Quality Profile	
<input type="checkbox"/>	[Judas] Shingeki no Kyojin (Attack on Titan) (Season 4 Part 1) [1080p][HEVC x265 10bit][Multi-Subs]	<input type="text"/>	Yes	Announced	Anime Quality Profile
<input type="checkbox"/>	[Judas] Shingeki no Kyojin (Attack on Titan) (Season 4 Part 1) [1080p][HEVC x265 10bit][Multi-Subs]	<input type="text"/>	Yes	Announced	Anime Quality Profile
<input checked="" type="checkbox"/>	Rascal Does Not Dream of a Dreaming Girl (2019) [BDRip] [1080p Hi10P AAC]	<input type="text"/>	Yes	Announced	Anime Quality Profile

Click import X Movie. At the bottom of the page.

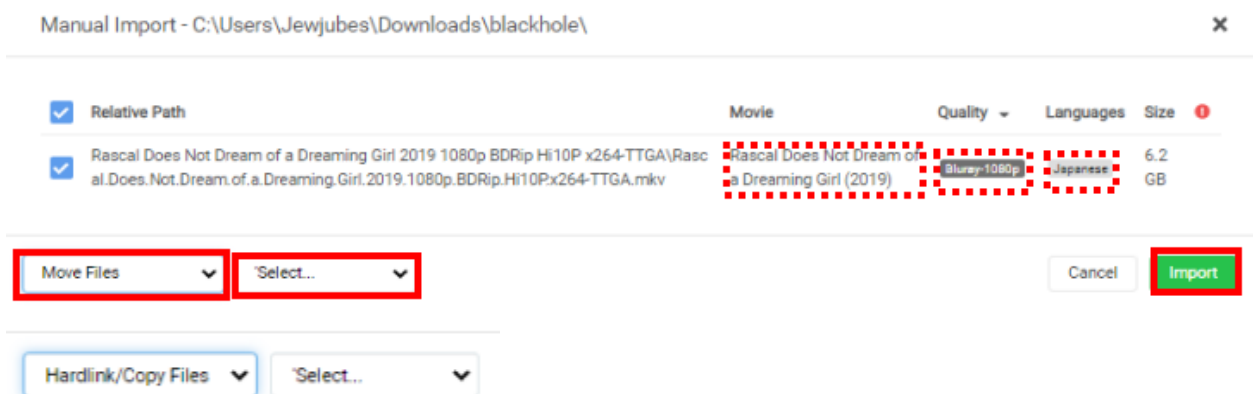

This screenshot shows the bottom of the Radarr interface. It features three dropdown menus: "Monitor" set to "Yes", "Minimum Availability" set to "Announced", and "Quality Profile" set to "Anime Quality Profile". To the right of these menus is a blue button labeled "Import 1 Movie" (highlighted with a red box) and a green button labeled "Start Processing".

## Manual Import

Useful for when Radarr downloads but doesn't import a movie. Or when manually downloading & importing a movie.

If You're still seeding the File. Be sure to change "Move Files" to "Hard link / copy files"  
If Either the Movie/Quality/Languages are incorrect change it in the Select dropdown.

## Jackett

<https://github.com/Jackett/Jackett/releases/>

[Prowlarr is a new index management software by the \\*Arr developers.](#)

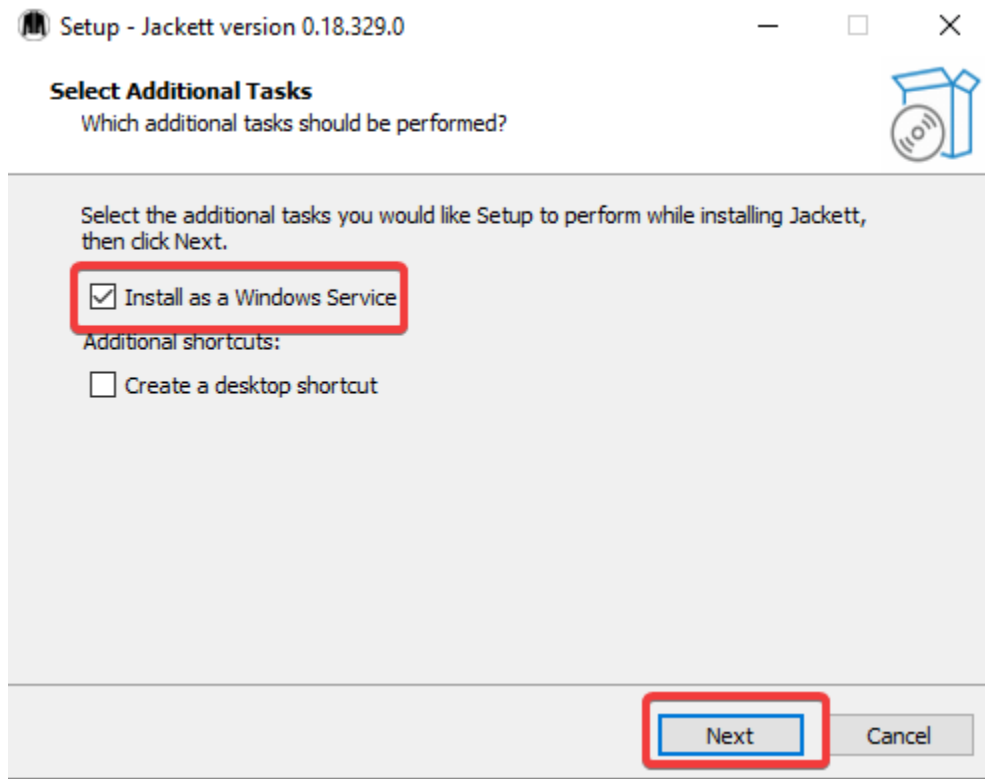

It will work with the Indexers as well.

**What is Jackett?** Jackett is a 'BitTorrent indexer' service that can be configured to run with Sonarr or Radarr. It allows you to add all of your torrent indexing sites in one place (Jackett), without needing to visit each site individually each time you go to search for a show or movie.

## Plex Guide for Anime

### Add Indexer.

[Download & Install Jackett.](#)  
[Jackett.Installer.Windows.exe](#)

Open Jackett from the System Tray. Or navigate to 127.0.0.1:9117 in your browser.

Find Nyaa. Select the wrench icon.  
Set category to : Anime - English Translated  
Save.

**\*If Nyaa isn't working in jackett. Or your IP Banned from Nyaa**  
**Try using a [VPN](#) OR [See here for solutions](#)**

:

\*Or. You can use [Animetoshu](#) instead.

As well if you're a part of any trackers that aren't listed in Sonarr/Radarr. You can add them in with Jackett.

Copy Torznab Feed & API Key to Sonarr & Radarr indexer.

To prevent your indexer credentials from being stolen. **Be sure to add an Admin Password to Jackett.**

### Adding a Jackett indexer in Sonarr or Radarr

1. Go to **Settings > Indexers > Add > Torznab > Custom**.
2. Click on the indexers corresponding **Copy Torznab Feed** button and paste it into the Sonarr/Radarr URL field.
3. For the API key use
4. Configure the correct category IDs via the **(Anime) Categories** options. See the Jackett indexer configuration for a list of supported categories.

### Adding a Jackett indexer in CouchPotato

1. Go to **Settings > Searchers**.
2. Enable **TorrentPotato**.
3. Click on the indexers corresponding **Copy Potato Feed** button and paste it into the CouchPotato host field.
4. For the **Passkey** use . Leave the **username** field blank.

### Adding a Jackett indexer to RSS clients (RSS feed)

1. Click on the indexers corresponding **Copy RSS Feed** button and paste it into the URL field of the RSS client.
2. You can adjust the **q** (search string) and **cat** (categories) arguments accordingly. E.g. `...&cat=2030,2040&q=big+buck+bunny` will search for "big buck bunny" in the Movies/SD (2030) and Movies/HD (2040) categories (See the indexer configuration for available categories).

To prevent your indexer credentials from being stolen. **Be sure to add an Admin Password to Jackett.**

[More Info](#)

## Prowlarr

<https://wiki.servarr.com/prowlarr/quick-start-guide>

<https://github.com/Prowlarr/Prowlarr/releases>

If Nyaa isn't working in Prowlarr. Try using a [VPN](#) OR [See here for solutions](#)

Prowlarr works pretty cool as well.

Prowlarr can be used as a Jackett alternative. As it can automatically manage all your indexers and integrates into your \*arr's (radarr/sonnar) by itself so add it once to Prowlarr. Then, Prowlarr adds it to all your \*arr's which is super great and makes things more easy.

It's in a beta stage currently. So it works as well as you'd expect it.  
But the process is so much better than Jackett.

You pick an indexer. Configure an app to inject it into. And Prowlarr takes care of the rest.

Edit Application

**Name**

**Sync Level**

Add and Remove Only: When it is added or removed from Prowlarr, it will update this remote app.

Full Sync: Will keep this app fully in sync. Changes made in Prowlarr are then synced to this app. Any change made remotely will be overridden by Prowlarr on the next sync.

**Tags**

Applies to indexers with at least one matching tag

**Prowlarr Server**

Prowlarr server URL as Radarr sees it, including http(s)://, port, and urlbase if needed

**Radarr Server**

Radarr server URL, including http(s):// and port if needed

**ApiKey**

The ApiKey generated by Radarr in Settings/General

Delete

Test

Cancel

Save

## Plex Guide for Anime

Then

### Add Indexer - Cardigann ✕

---

**Name**

**Enable**

**Redirect**  Redirect incoming download requests for indexer instead of Proxying using Prowlarr

**App Profile**  ▼  
App profiles are used to control RSS, Automatic Search and Interactive Search settings on application sync

**Filter**  ▼

**Category**  ▼

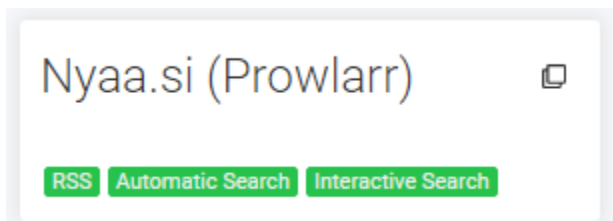

**Sort requested from site**  ▼

**Order requested from site**  ▼

**Indexer Priority**   
Indexer Priority from 1 (Highest) to 50 (Lowest). Default: 25.

---

Then just like configuring an indexer in Sonarr/Radar. It'll appear in our Indexer Tab. Ready to go. Without having to juggle around torznab urls and API Keys. (Optimistic about its future)

# Plex Media Server

([Mostly Closed Source](#))

Plex is designed to let many Apps play media from a central Server You can playback media on your local network, stream it over the internet, or physically sync media to a mobile device.

The idea with Plex is that we want to [Direct play](#) our Media. This means streaming our Media to devices that are compatible with playing back the source Media. Or else our Plex Server will have to [transcode the Media](#). Which will cause Plex to convert the Media to a format that is compatible with the Client Device on the fly. This requires a lot of CPU resources to do. And is generally not recommended to do.

Another note, if you have any Media stored on the cloud. That you wish to add to Plex. You can use RClone to mount it on your computer. Plex will see it as another drive. [See Other Guides on how to do this.](#)

We'll be using the HamaTV Agent to load our metadata for Plex. And Absolute Series Scanner to

There's multiple other Anime Agents for Plex.

Such as :

[MyAnimeList](#), [Kitsu.io](#) & [AniList](#) Metadata Agents for their respective sites.

[If you wish to use the MyAnimeList Metadata Agent. Please see this note by u/Fribbtastic on the issues of pairing Sonarr with MyAnimeList](#)

[“Metadata Agents” \(or just “agents”\) are the server component that’s responsible for taking the information from the scanner and then acting on it to help h metadata \(plot summary, cast info, cover art, music album reviews, etc.\) that bring your media libraries to life. In most cases, this metadata is retrieved from online resources \(such as AniDB, The TVDB, Last.fm, etc.\).](#)

[“Scanners” in Plex are the server components that go look at the media locations you specify for your libraries and then figure out:](#)

1. [Whether the file is appropriate for that library \(e.g. is it a TV episode for a TV library?\)](#)
2. [If it’s the appropriate type, then which item is it \(e.g. it’s season 3, episode 7 of the show Futurama\)](#)

**Download Plex Media Server from**

Plex Guide for Anime

<https://www.plex.tv/en-ca/media-server-downloads/>. The installer is very basic, just press Install and let it do its thing.

HamaTV & Absolute Series Scanner

**OPTIONAL**

**\*Using HamaTV & Absolute Series Scanner isn't necessary anymore. The default Plex TV Agent & Scanner do a fine job.\***

This is skippable. [You can continue to the setup portion if you'd rather.](#)

**This is the setup for Absolute Series Scanner & HamaTV**

[Hama Agent Github](#)

[Absolute Series Scanner Github](#)

Hama.Bundle: [Download the Hama.Bundle Plugin Here](#)  
& Scanner: [Download the Absolute-Series-Scanner Here](#)

Exit Plex from the system tray icon.

Open Windows File Explorer. Navigate to %localappdata%\Plex Media Server  
Or C:\Users\[USERNAME]\AppData\Local\Plex Media Server

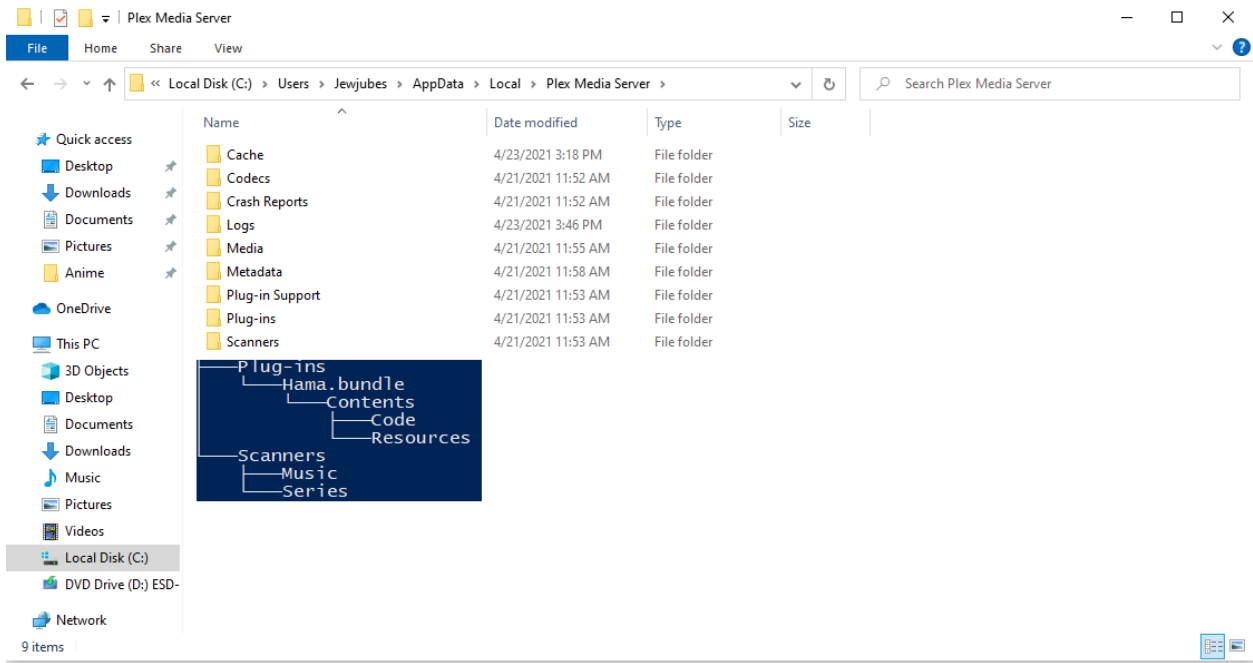

Install the Hama.bundle-master folder in the Plugins folder. Rename to Hama.bundle

Navigate back to %localappdata%\Plex Media Server

Install the Scanners folder (Located under the Absolute-Series-Scanner-master Folder) in the %localappdata%\Plex Media Server Folder.

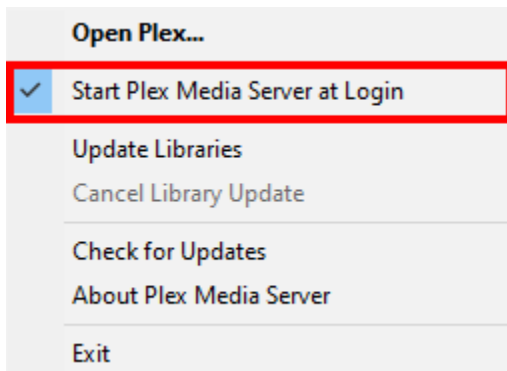

# Plex Guide for Anime

This is what your Plex Media Folder should look like. w/ Tree View.

## Setup

Then start Plex Media Server. You can open it by searching in the Start Menu. Be sure to check off "Start Plex Media Server at Login"

You can also Access Plex through the System Tray. > Open Plex  
Or through a web browser by typing into the address field the :[127.0.0.1:32400](http://127.0.0.1:32400) (IPADDRESS:PORTNUMBER)  
Or through [app.plex.tv](http://app.plex.tv)

Plex will prompt you to sign in. Or create an account.

You can share Plex Libraries with Friends/Family

If sharing with Remote Users. You must configure [Remote access](#)

## Plex Guide for Anime

### Plex Web

While it is possible to use the Plex Web Player to playback our Media. It doesn't handle Anime Subtitles well. [See Plex Clients for Alternatives](#)

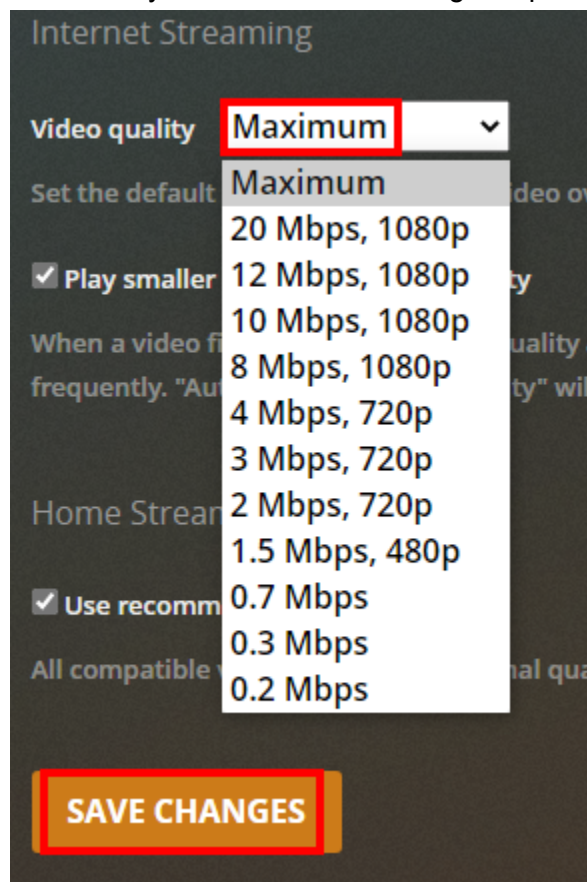

### Quality

[Plex Web App settings](#)

The Idea here is that we want to **AVOID** Transcoding.

### Set to Maximum

Enable Play smaller videos are original quality

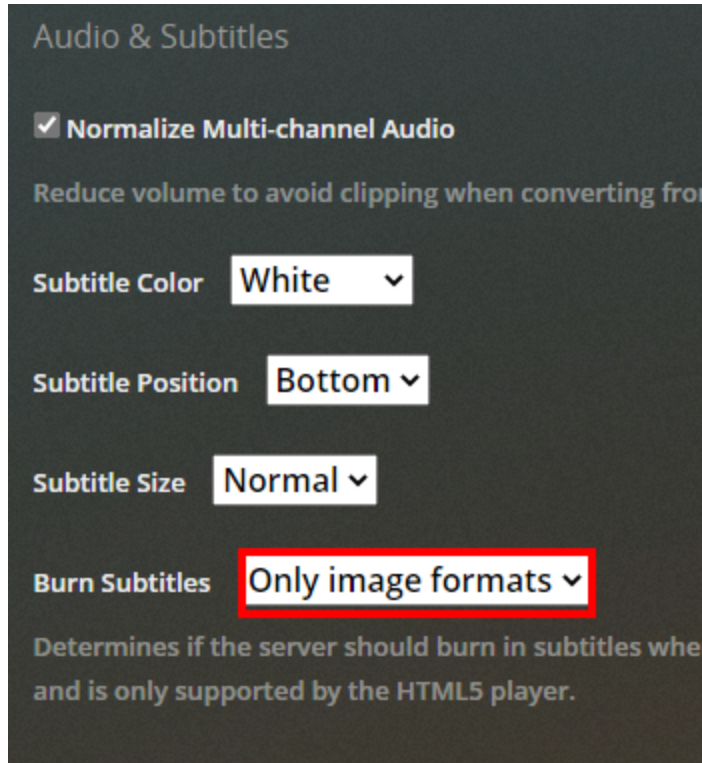

### Player

Burn Subtitles :

Choose between: Only image formats/Automatic/Always

I've found "Only Image formats" works best with seasonal shows.

From groups such as Erai-Raws/SubsPlease

[Plex Web Player doesn't support SSA/ASS](#)

iOS Plex, Kodi & Plex Media Player (Plex for Windows) do support it.

[Plex for Android does support it.](#)

Anime Subtitles commonly use [SSA/ASS](#)

[Clients can use the Kodi for Plex add-on to avoid Plex transcoding because of the subtitles.](#)

### [Burn Subtitles](#)

Determines if the server should burn in subtitles when converting video depending on the subtitles format. Avoiding burning in subtitles improves server performance and is only supported by the HTML5 player. Available choices:

- Automatic – (Default) Burn in subtitles when the subtitle is an image-based format (e.g. VOB SUB, PGS, SUB/IDX, etc.) as well as for complex ASS/SSA subtitles.
- Only image formats – Only burn in subtitles when the subtitle is an image-based format (e.g. VOB SUB, PGS, SUB/IDX, etc.)
- Always – When used, subtitles will always be burned into the video, regardless of the original source type of the subtitle.

[What's the difference between all these subtitles?](#)

[Related Plex Forum post on this issue for Nvidia Shield.](#)

## Plex Guide for Anime

### Library

#### [Plex Library Settings](#)

##### Enable Scan My Library Automatically

Optional: Scan my Library periodically. Helps if Plex doesn't scan automatically. Or if Media is stored on a remote library such as a NAS.

Optional: Generate Video Preview Thumbnails. If you hover your mouse over the timeline you'll get a thumbnail preview of it.

Scan my library automatically

Your library will be updated automatically when changes to library folders are detected.

Scan my library periodically

Library scan interval

Empty trash automatically after every scan

Generate video preview thumbnails

Video preview thumbnails provide live updates in Now Playing and while seeking on supported apps. Thumbnail generation may take a long time, cause high CPU usage, and consume additional disk space. You can turn off thumbnail generation for individual libraries in the library's advanced settings.

Generate chapter thumbnails

Chapter thumbnails provide images in the chapter view on supported apps. They can take a long time to generate and consume additional disk space.

Analyze audio tracks for loudness

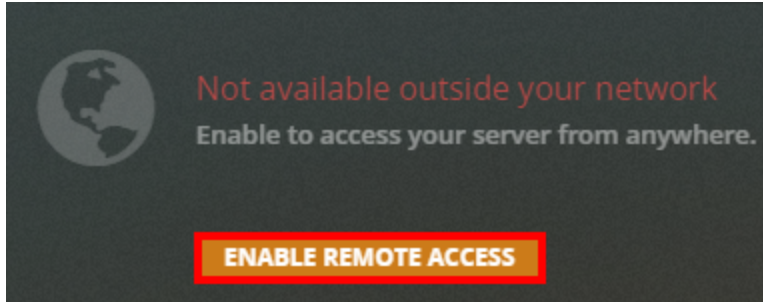

Loudness analysis allows various features, such as loudness leveling and smart transitions. It can take a long time to complete when analyzing many tracks, and cause high CPU usage.

### Remote access

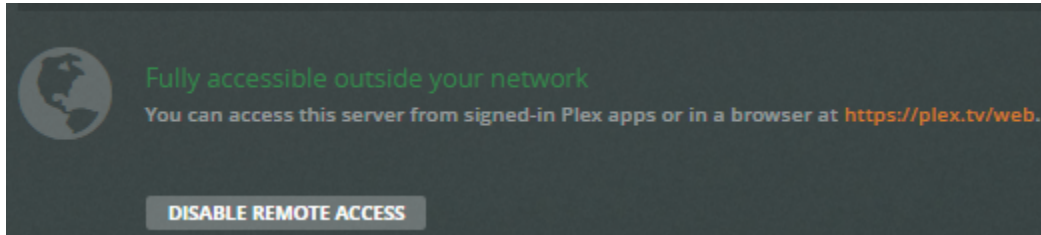

Remote Access enables access to your Plex Media Server from outside your local network so that you can reach it when away from home or for sharing content with family or close, personal friends.

Not necessary if not accessing it outside your home.

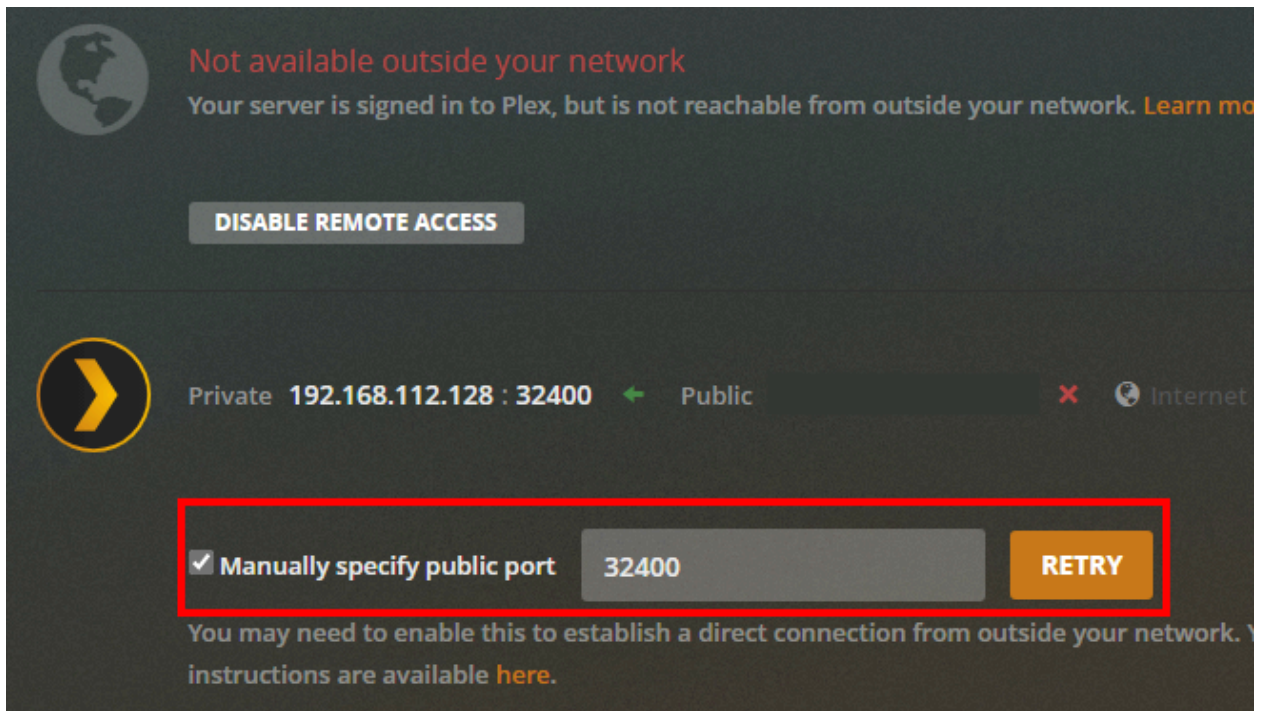

## Plex Guide for Anime

Green "Fully accessible outside your network" Good

Red "Not available outside your network" bad

[Plex Port Forwarding](#)

Plex Plugins

**Not necessary**

[Plex will be slowly removing plugin support in Plex over time](#)

See

## Plex Guide for Anime

### Transcoder

We'd prefer to avoid transcoding

Select "Automatic"

[What's the difference?](#)

### Transcoder quality

These will influence the quality used when transcoding media. Select from:

- Automatic – the Server will select from the other three options automatically
- Prefer higher speed encoding – lower quality, but faster transcodes
- Prefer higher quality encoding – higher quality, but slower transcodes
- Make my CPU hurt – best quality with slower transcodes and highest CPU usage

Consider disabling video stream transcoding

Keep in mind though, that setting does not force clients to try and directly play a file. If the client wants a transcode, playback will just fail and stop.

[Hardware-acceleration](#) is a premium feature and requires an active [Plex Pass](#) subscription.

## Plex Guide for Anime

Transcoder quality **Automatic** ▾  
Quality profile used by the transcoder.

Transcoder temporary directory  
Directory to use when transcoding for temporary files.

Transcoder default throttle buffer  
60  
Amount in seconds to buffer before throttling the transcoder.

Background transcoding x264 preset **Very fast** ▾  
The x264 preset value used for background transcoding (Sync and Media Optimizer). Slower values will result in better video quality and smaller file sizes, but will take significantly longer to complete processing.

**Enable HDR tone mapping**  
Transcoded HDR content will appear highly dimmed and desaturated with this disabled. Additional driver components may be needed to support hardware transcoding with this feature enabled; see our support articles for further details.

**Disable video stream transcoding**  
Disable transcoding of the video stream in transcoder operations. With this set, the transcoder may still transcode audio as well as remux video.

**Use hardware acceleration when available**  
Plex Media Server will attempt to use hardware-accelerated video codecs when encoding and decoding video. Hardware acceleration can make transcoding faster and allow more simultaneous video transcodes, but it can also reduce video quality and compatibility.

**Use hardware-accelerated video encoding**  
If hardware acceleration is enabled, this controls whether it's used for encoding, in addition to decoding.

Maximum simultaneous video transcode **Unlimited** ▾  
Limit the number of simultaneous video transcode streams your server can utilize

**SAVE CHANGES**

Save.

Prefer subtitles in : English

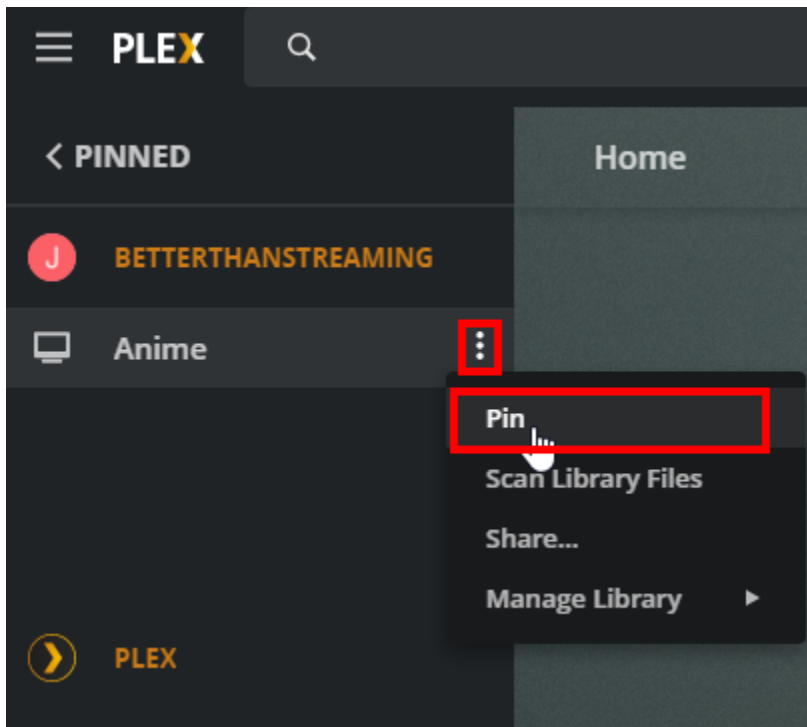

## Plex Guide for Anime

Return to the home screen. This can be done by clicking the Home icon. In the top left corner.

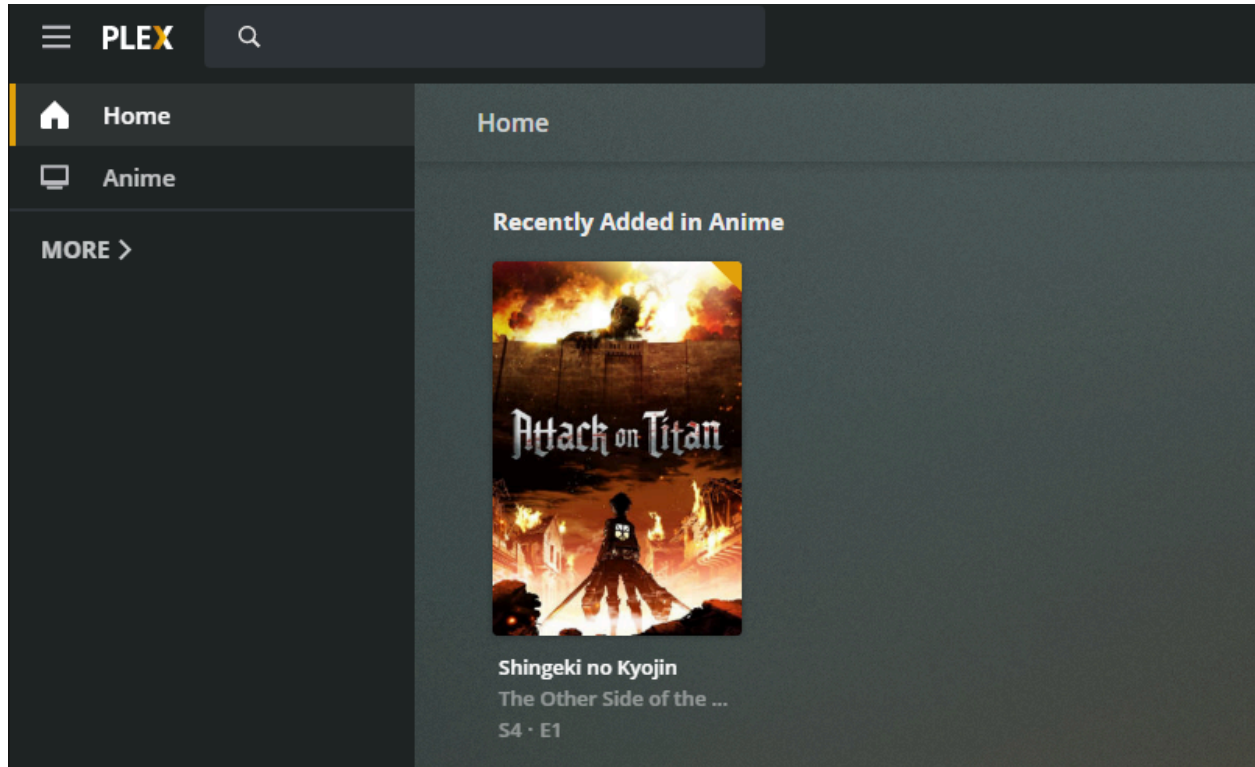

Be sure to pin your libraries.

## Plex Home

And you're set!

Where's all my content?

[Plex - Naming & Organizing](#)

[Absolute Series Scanner - File Naming](#)

[Alternatively you can force Plex to match.](#)

[ASS - Forcing the movies/series ID](#)

If for some reason Plex didn't find the match. You can force it. By entering in the [anidb-id] in title search field  
For Example: <https://anidb.net/anime/14107> is the entry of Demon Slayer and has the anidb id of 14107. We'd change the title in Fix match to include the anidb -id.

"Demon Slayer: Kimetsu no Yaiba [anidb-14107]"

**It should be very rare if ever that such a situation like this occurs. If we've named our files correctly.**

## Plex Guide for Anime

## Plex Clients

[Plex has many applications](#) & [many different devices](#).

### Android

[Android Clients support .ass subtitles.](#)

### Windows

[You can download the Windows 10 Plex Player Here](#)  
& [Setup with Client Settings](#)

### Kodi Add-on

[The Plex Kodi Add-on is optional for watching Anime with .ass Subtitles on Android Devices](#)

~~As the Native Plex App on Android Devices currently doesn't have support for ASS/SSA Subtitles.~~

~~This is because Plex on Android Devices uses ExoPlayer. As the backend Video Player.~~

[Exoplayer currently doesn't have support for ASS/SSA Subtitles.](#)

\*One issue of note when using The Plex Kodi-Addon is which Subtitles are sometimes delayed for the first 10 seconds

### PlexKodiConnect

Alternatively [PlexKodiConnect](#) is a very powerful client.

*"Combine the best frontend media player Kodi with the best multimedia backend server Plex"*

[Installation Instructions can be found on the Github Wiki](#) & [Picture Walkthrough](#)

[Can be combined with Skins to change the UI](#) (Use arctic horizon)

### Composite

[Composite](#) can also work as well.

### Phone

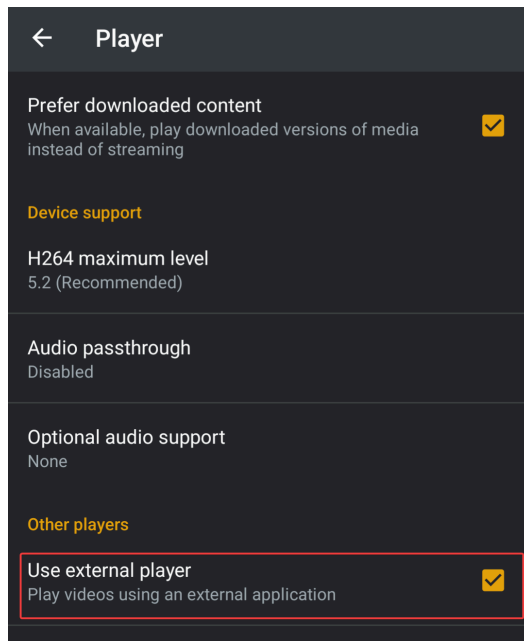

If you wish to use your phone. To watch Plex.

## Plex Guide for Anime

[You can enable the use of External Players.](#) Or Use [Kodi](#)

By enabling “Use External Player” in Settings > Advanced > Player

And using a video player of your choice. Preferably MX Player or MPV. [VLC Isn't recommended.](#)

## Plex MPV Shim

[MPV Shim is a simple and lightweight Plex client, with support for Windows and Linux. Think of it as an open source Chromecast for Plex. You can cast almost anything from Plex and it will Direct Play. Subtitles are fully supported, and there are tools to manage them like no other Plex client.](#)

An Application to allow casting of Plex to MPV.

Simply download the application. Open MPV & Plex. Then Cast your Media to Plex MPV Shim. Highly configurable & Customizable Client for watching Plex at your Desktop.

Taiga will detect media watched Plex with and Plex MPV Shim.

Editing of the mpv.conf for the Official Plex Client is only applicable to Plex Media Player (for Windows Home Theater PCs) **not** the new Plex For Windows App.

## Jellyfin MPV Shim

[Jellyfin MPV Shim is a cross-platform cast client for Jellyfin. It has support for all your advanced media files without transcoding, as well as tons of features which set it apart from other multimedia clients](#)

Taiga will detect media watched with Jellyfin and Jellyfin MPV Shim

## Client Settings

## Plex Guide for Anime

[You'll want to set up the Plex Clients \(Devices that will be accessing Plex\) to use the Original Quality.](#) This is to avoid unnecessarily transcoding the video.

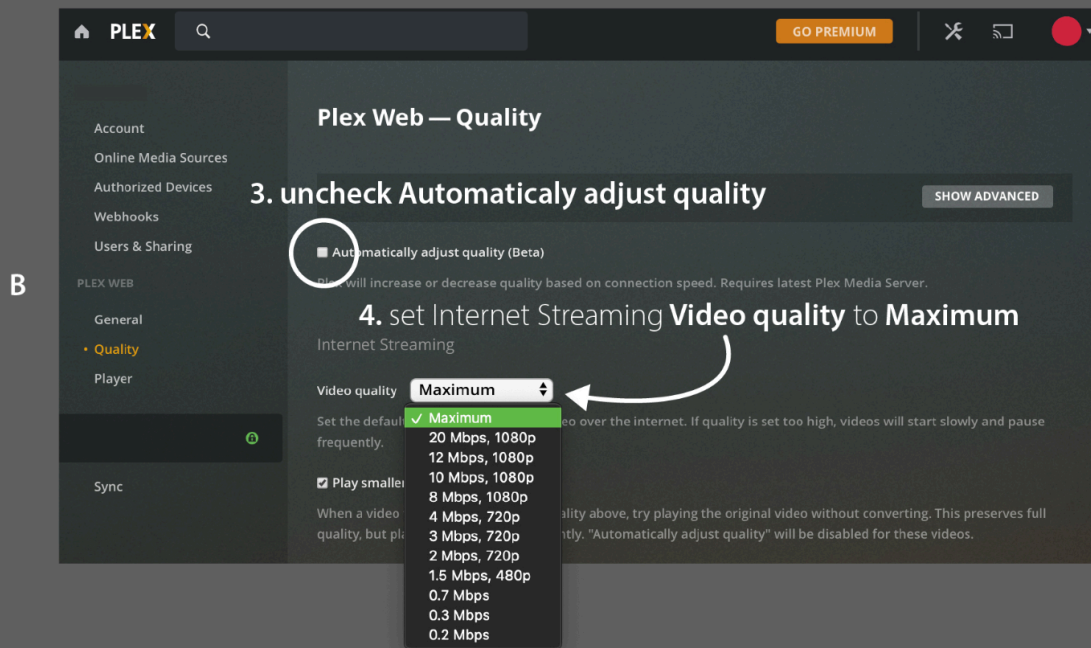

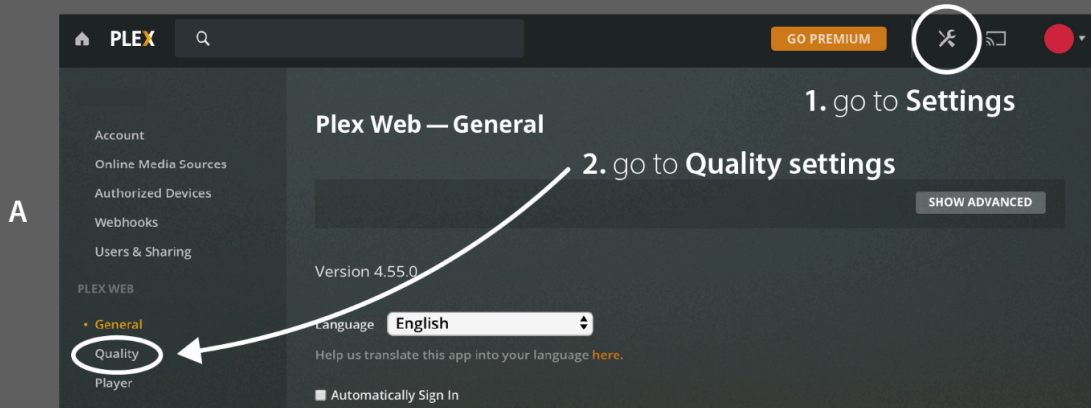

[/u/Endawmyke has created graphical guides on setting up Plex Clients to Direct Play on multiple devices](#)

Also <https://mediaclients.wiki/> has guides to set up clients properly.

# how-to setup plex

you **must do this** every time you login to a **new app** or **browser** for the **first time**

visit **app.plex.tv** or open the **plex desktop app**

**congratulations** you're **ready to watch!**

Plex Guide for Anime

[You can also check out Taiga to sync your watchlist to your AnimeList](#)  
[Or PlexAniSync if you're not watching at your computer.](#)

## VPN

[Techquickie - What is a VPN?](#)

Connecting a VPN to qBittorrent

[We use a VPN to avoid receiving Copyright infringement complaints from our Internet Service Providers.](#)

This is optional but recommended, Anime torrents practically never get DMCA'd. However, it's better prefer to be safe than sorry.

What is DMCA?

[Wikipedia](#) [ELI5](#) [Article](#)

**I'll be showcasing NordVPN & Mullvad.**

**\*I'm not necessarily making VPN recommendations here.**

**I'll be showing the setup that I'd use for these two popular VPNs.**

**You should choose a VPN that suits your needs.**

[Safety Detectives](#) [Privacytools](#) [TorrentFreak](#)

You should do your research on choosing a VPN that suits your needs. I am not familiar with the copyright laws of your area. As well, You shouldn't blindly take legal advice from random strangers online. In regards to the file-sharing, and copyright infringement laws of your area. Your ISP should have a section on their website regarding their policies. Such as "[Comcast DMCA](#)" or "[AT&T DMCA](#)". Or "[Jio DMCA Policy](#)"

If that's too much trouble just pay for a VPN. In order to protect yourself whilst pirating, and save yourself the troubles of dealing with DMCA notices.

[Use a leak test to verify that your VPN is working.](#)

[Which VPN Providers Really Take Privacy Seriously in 2021?](#)

**I DON'T RECOMMEND USING A FREE VPN OR PIRATING A VPN.**

Free VPN services may cost nothing but there is usually a good reason for that - it means the provider will be turning a profit in some other way, usually with invasive advertising or by selling your browsing data to third-parties (rather defeating the whole drive for privacy in the first place). If the service is free, you're the product

[Business Insider - Why you should never use a free vpn](#)

[Tom Scott - This Video Is Sponsored By \[REDACTED\] VPN](#)

## Plex Guide for Anime

### qBittorrent behind VPN

Plex behind a VPN isn't necessary. Plex is already encrypted. And using a workaround is a headache.

Which leads to a perfectly reasonable request of only having your torrents behind a VPN.

### Mullvad

<https://mullvad.net/en/download/windows/>

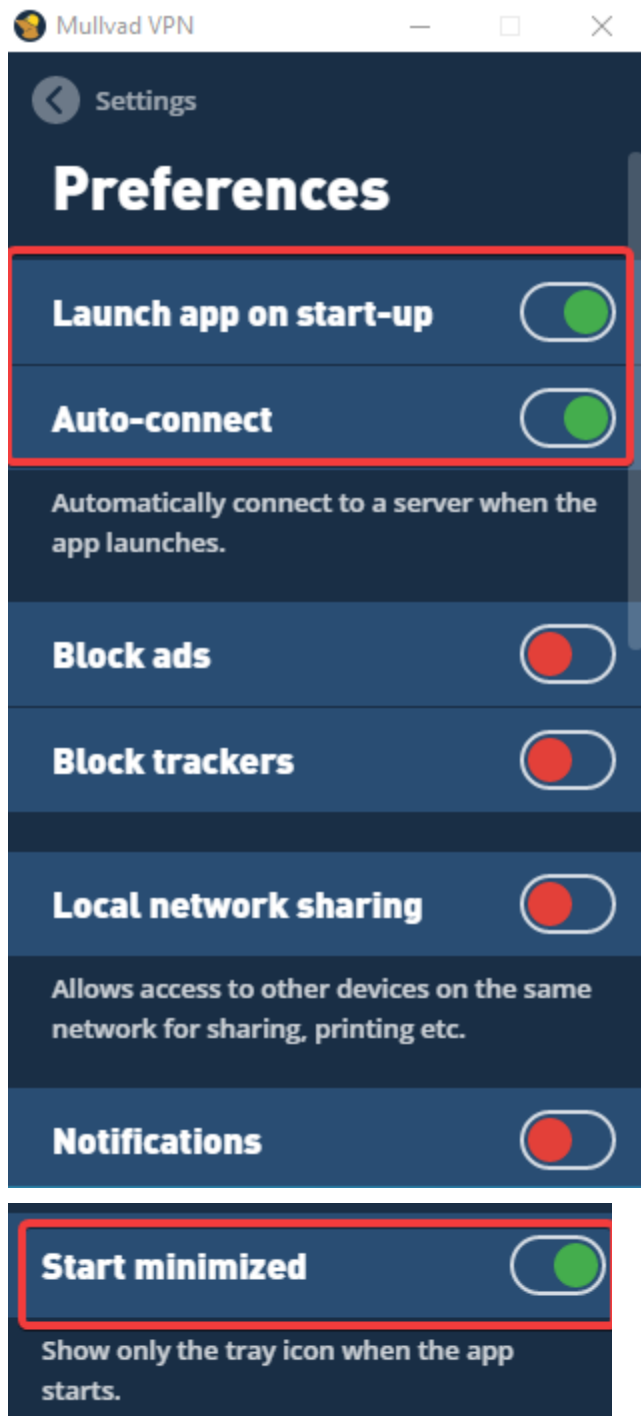

The Mullvad VPN is currently beta-testing Application Split Tunneling. Which can be useful for excluding Plex Media Server from the VPN Tunnel.

<https://mullvad.net/en/check/>

### Preferences

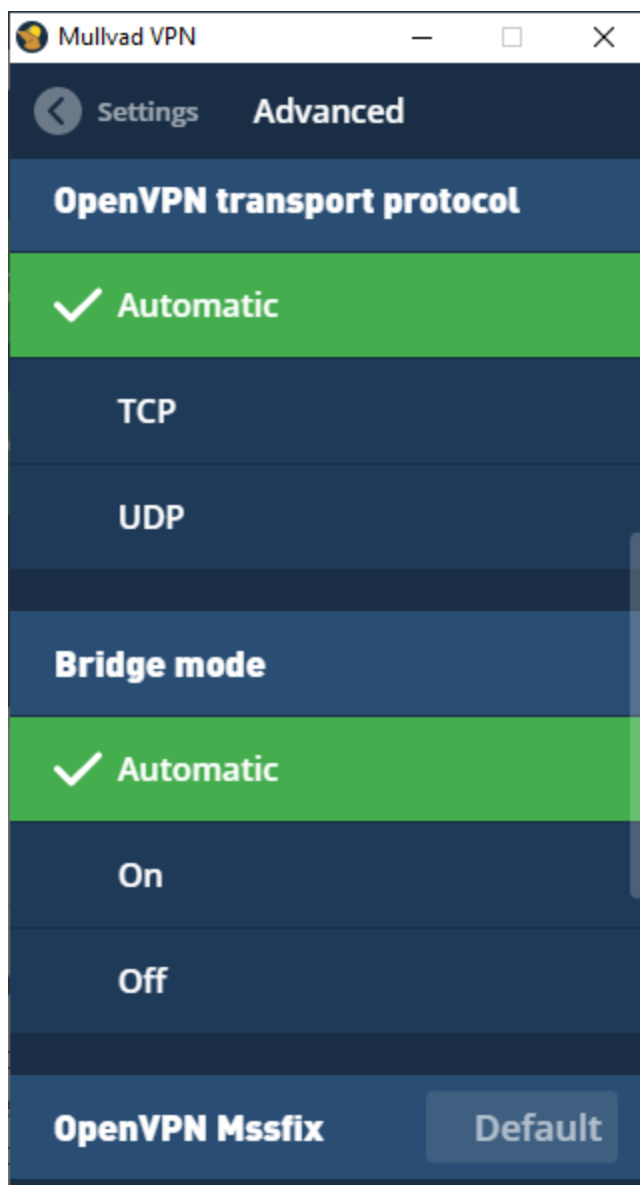

You are free to choose whichever settings you'd like.

I'll be enabling *Launch App on Start-up, Auto-connect & Start Minimized*

Advanced

Default settings are fine.

It isn't necessary for Plex Media Server to be run behind a VPN.

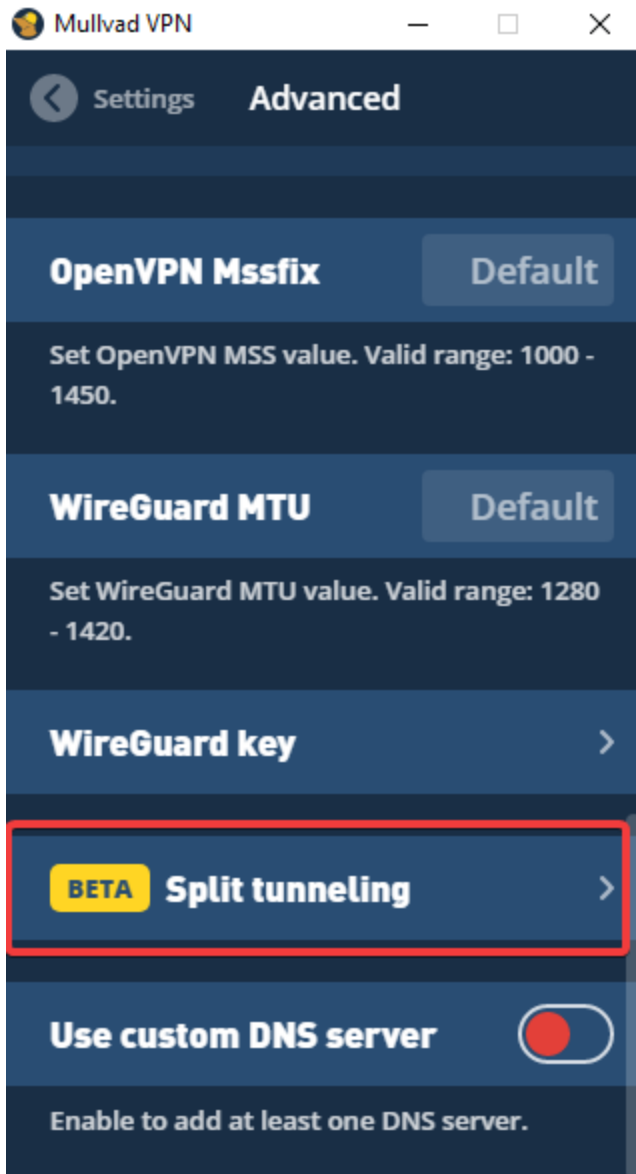

Using a VPN will give your computer a different IP Address. Plex will work on your local network. However, for remote connections outside your network. Plex will require a port forwarded address.

You can either [Setup Port-forwarding with Mullvad](#)

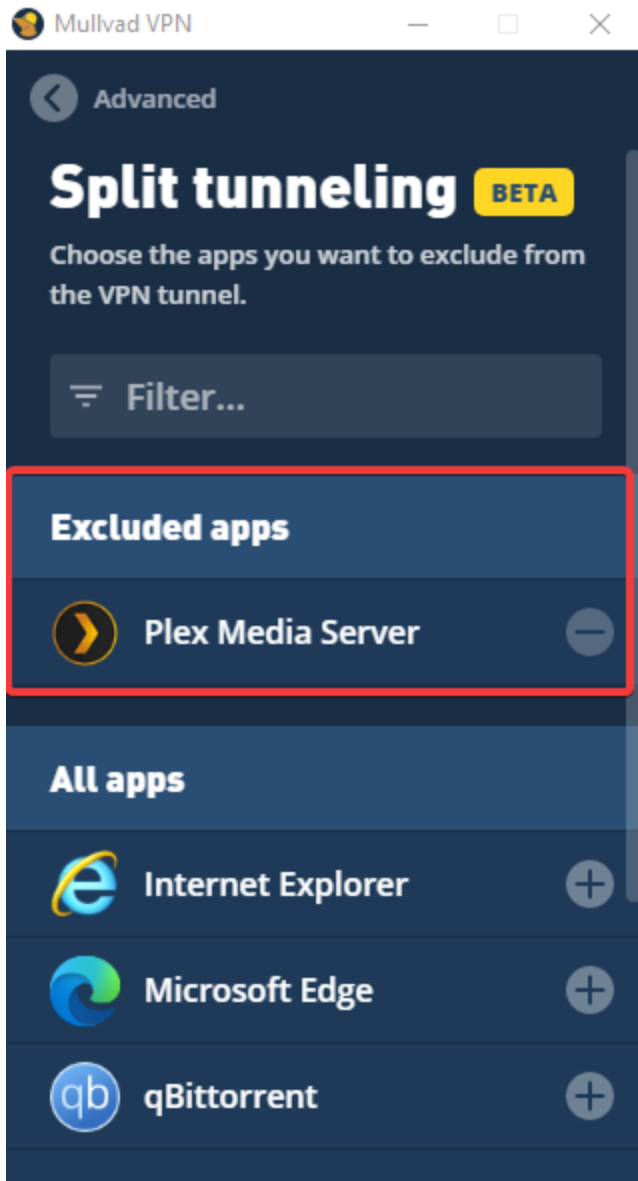

Or, You can exclude Plex Media Server from the VPN Tunnel.

## Plex Guide for Anime

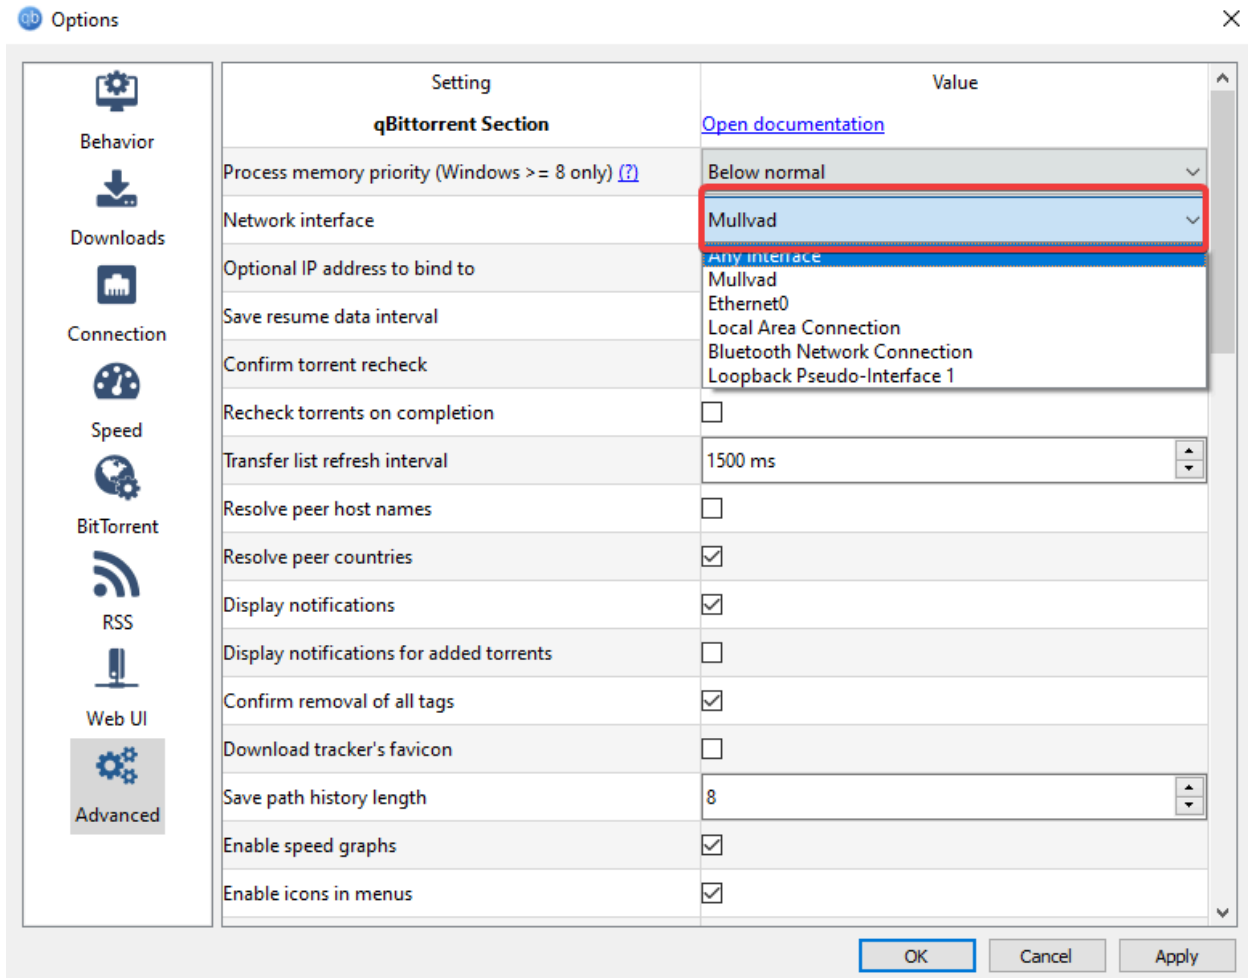

## Plex Guide for Anime

qBittorrent

Go to qBittorrent settings > Advanced. Changed the Network interface to use the VPN's Network interface (Mullvad).

# Plex Guide for Anime

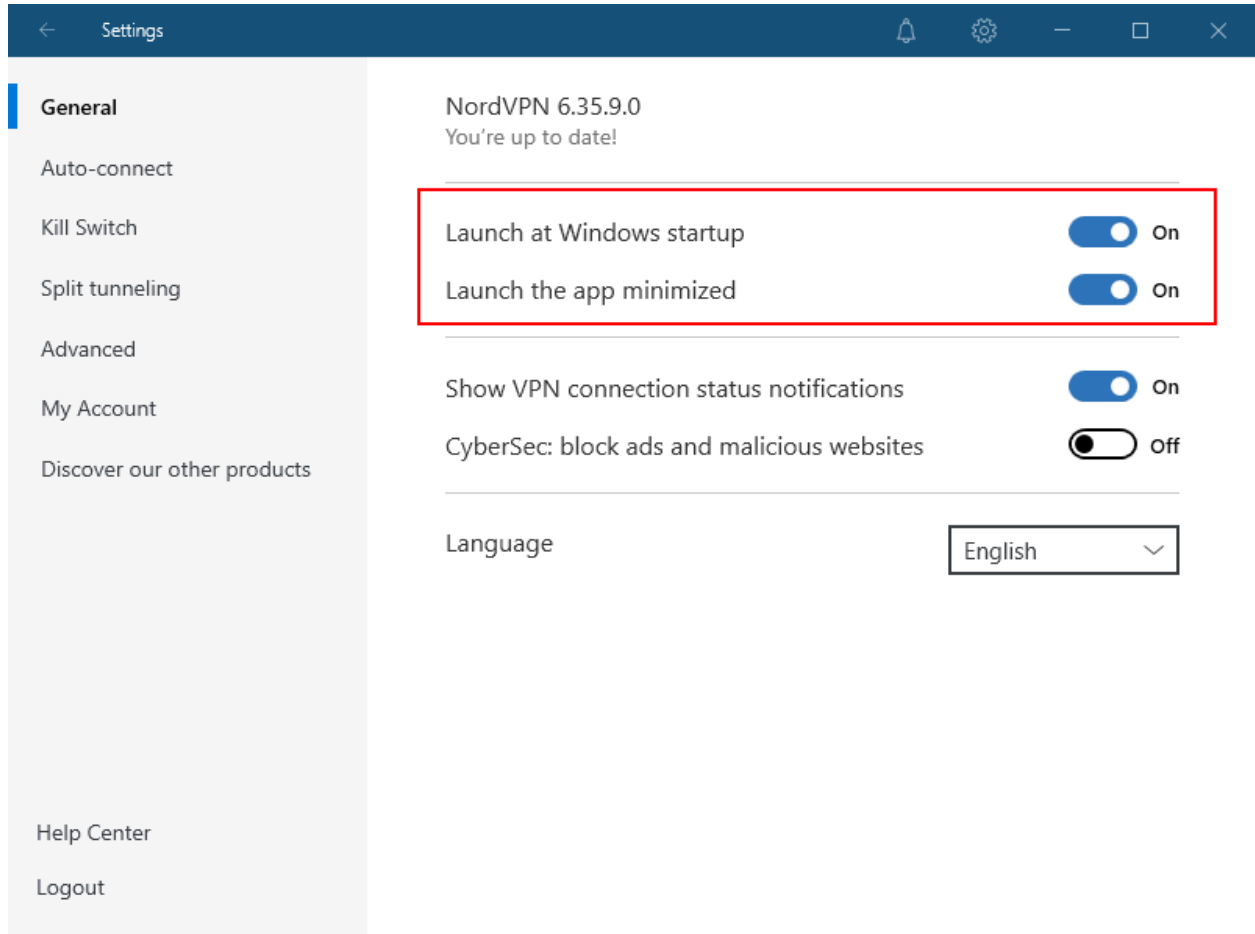

## NordVPN

### General

Enable "Launch at Windows startup" & "Launch the app minimized"

## Plex Guide for Anime

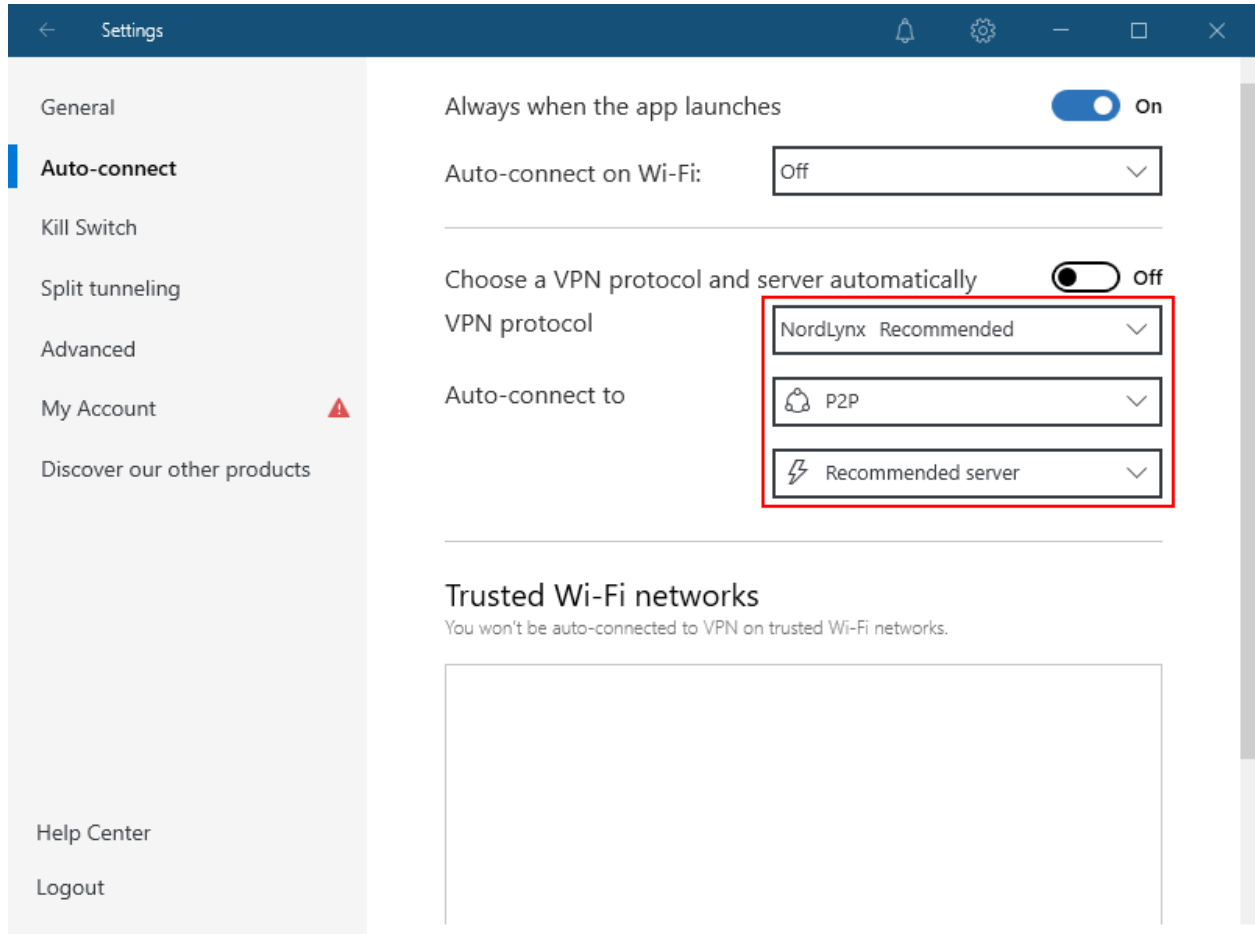

### Auto-connect

VPN Protocol : NordLynx (Use OpenVPN (UDP) or (TCP) if VPNs aren't permitted on your connection) [Which is better?](#)

Auto-connect to : P2P (Must use for torrenting) & Recommend server.

## Plex Guide for Anime

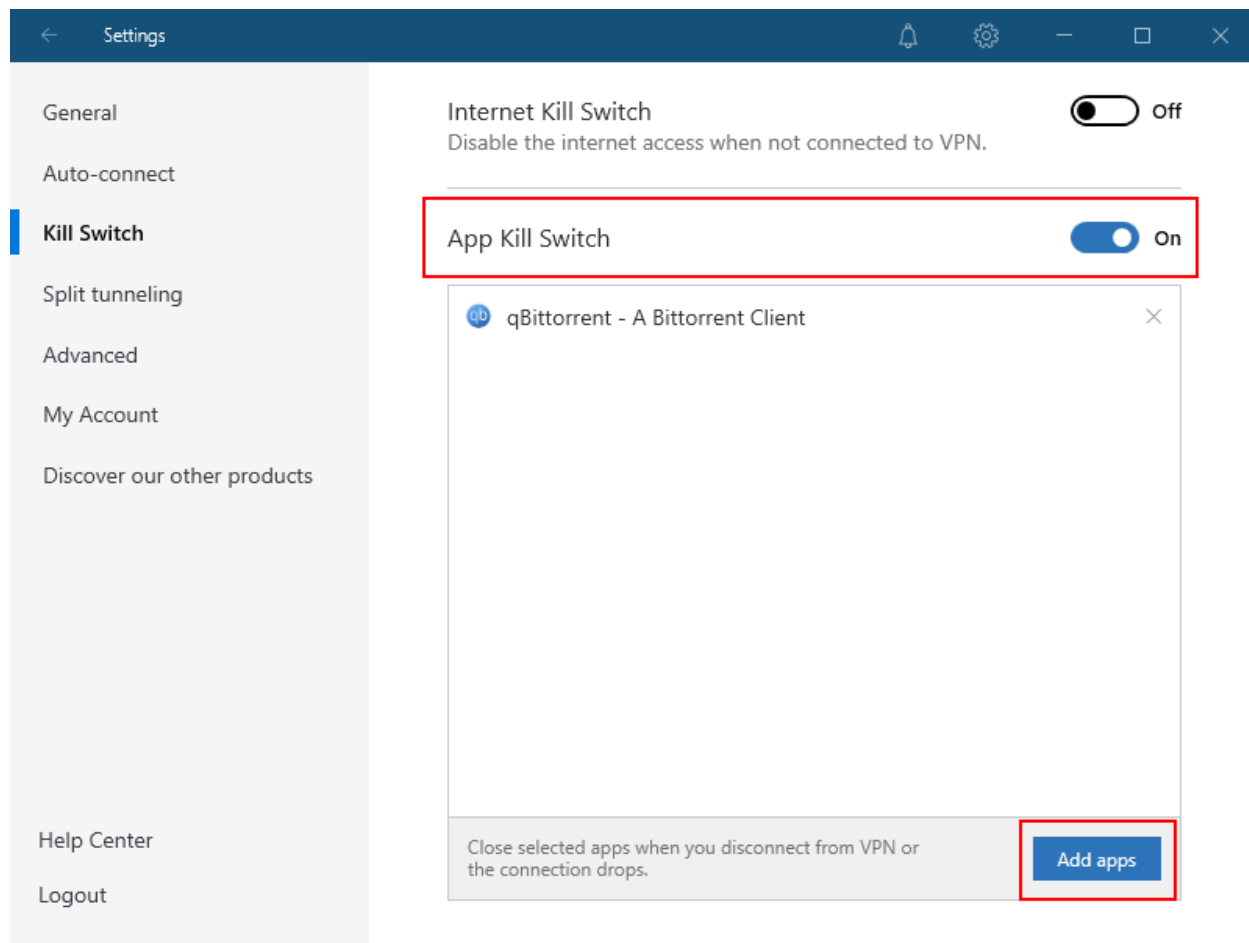

Kill Switch

App Kill Switch: ON

Add apps > qBittorrent

## Plex Guide for Anime

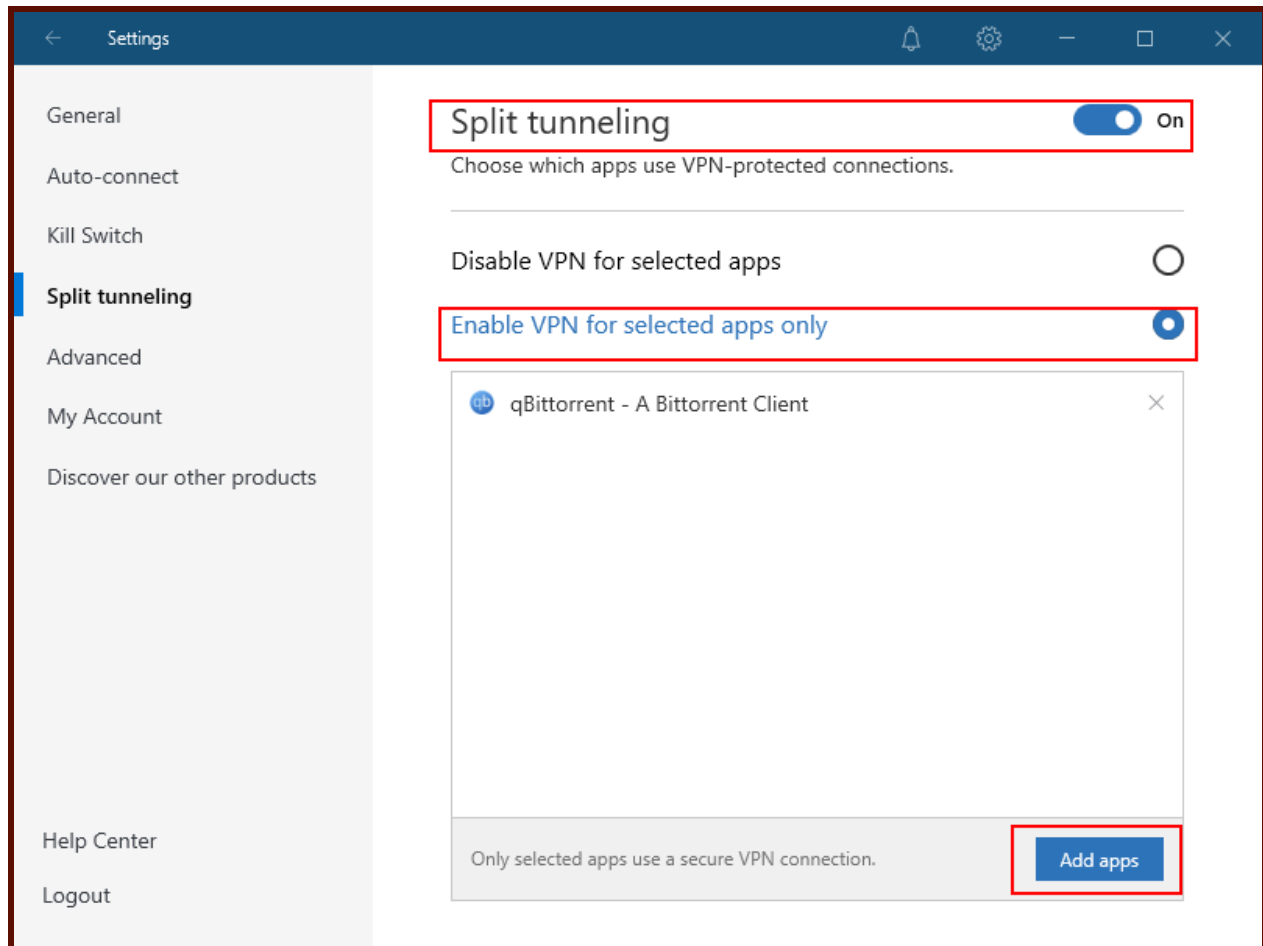

Split tunneling: ON

I like to use split tunneling with qBittorrent. Instead of having all the internet traffic go through the VPN. I can choose to only have a certain program(qBittorrent) go through the VPN. While everything else stays outside the VPN.

Few options here.

You can disable VPN for selected apps. (Plex Media Server) (Won't use a VPN for Plex)  
Or Enable VPN for selected apps only (qBittorrent) (Will ONLY use a VPN for qBittorrent)  
Or disable it entirely. You're in charge here. (ALL TRAFFIC GOES THROUGH VPN)

## Plex Guide for Anime

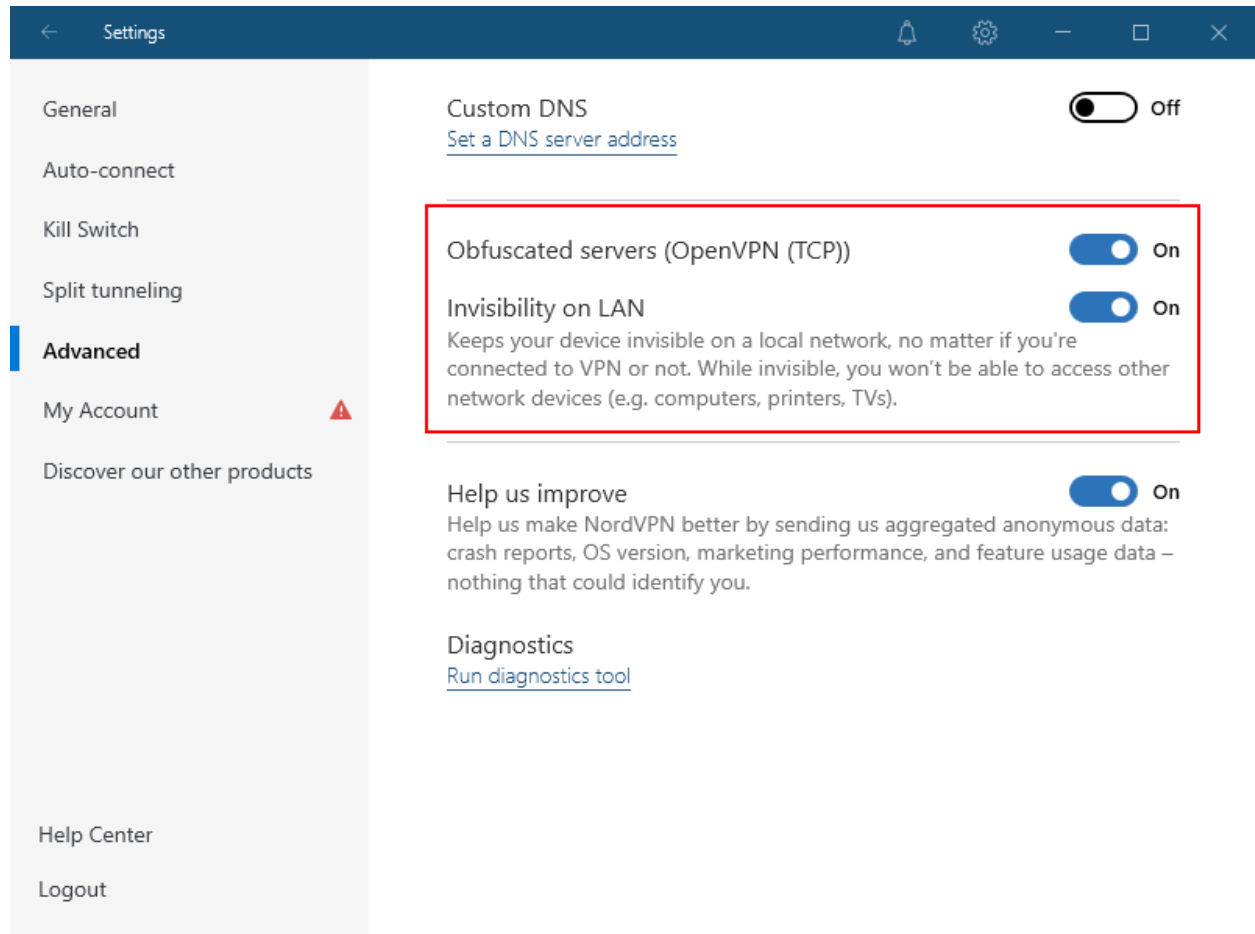

VPNs are blocked on my connection.

If VPNs are blocked on your connection. Toggle on Invisibility on Lan.

As well as, Obfuscated Servers if using OpenVPN (TCP)

## Plex Guide for Anime

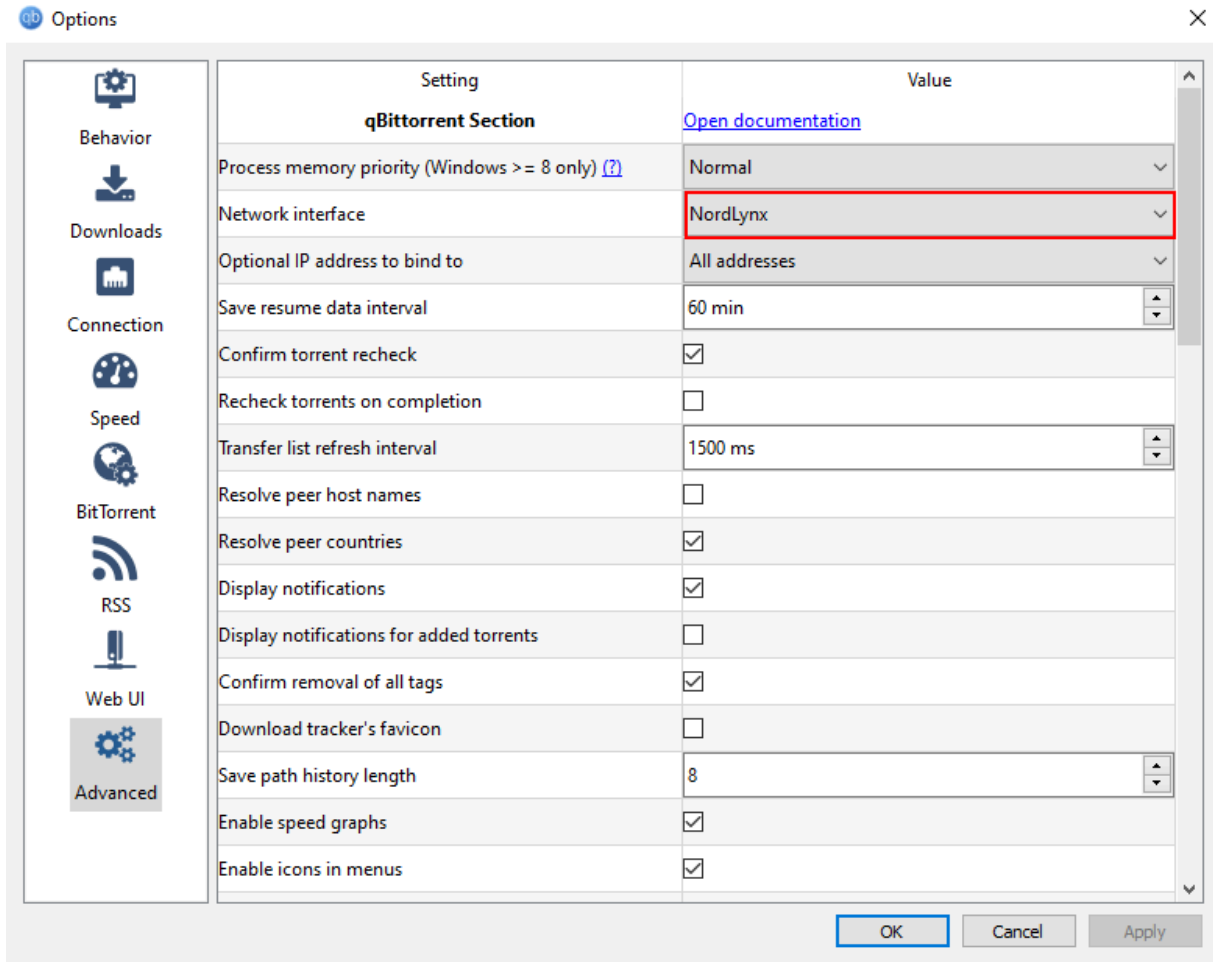

### qBittorrent

Go to qBittorrent settings > Advanced. Changed the Network interface to use the VPN's Network interface.

Works with Plex Web Player & It's awesome.

[/u/NyanNyanCandy created a guide for Taiga](#)

Currently only supports the Plex Web Player. [Not the Plex Desktop App.](#)

Taiga works together with MPV Shim., if you use [Plex/Jellyfin mpv shim](#) and set it to an external MPV player, taiga will detect it mpv and sync.

#### PlexAniSync

<https://github.com/RickDB/PlexAniSync>

Another method for tracking Anime watched on Plex.

Create a python script to automate updating your Plex Watch history to AniList.

Sometimes requires adding basic entries to a YAML Script to be recognized by the scanner.

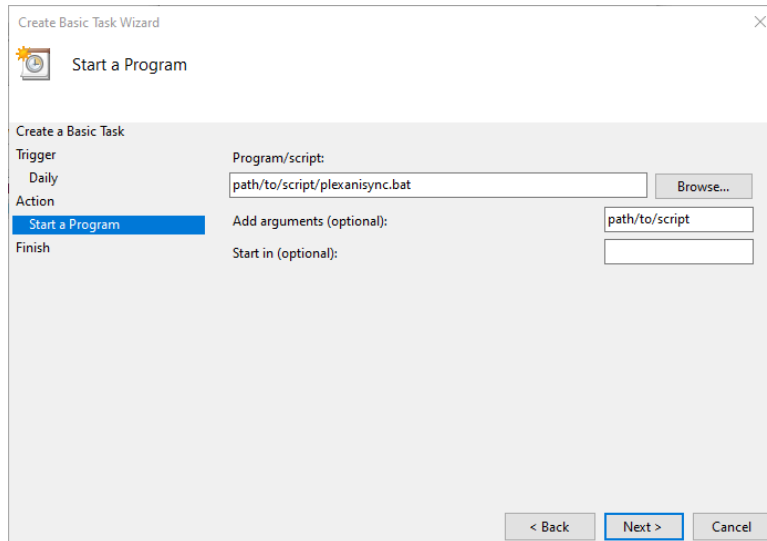

Can be automated with a batch script in Windows Task Scheduler.

## Plex Guide for Anime

I automated it with Windows Task Scheduler using a simple batch script.

```
"path/to/python.exe" "path/to/plexanisync.py"
```

pause

## PlexAniSync-Mappings

<https://github.com/mizz141/PlexAniSync-Mappings>

Community made mappings for mapping Plex Anime entries to Anilist

## Mal-Sync

<https://github.com/MALSync/MALSync>

Browser extension for tracking Anime watched on Plex.

## Trackma

<https://github.com/z411/trackma>

Alternative to Taiga on Linux

## Plugins

### Trakt Scrobble

#### [Trakt.tv](#)

There's a [Plex Trakt Scrobber](#) that exists for Plex. It allows you to sync your Plex Media Server Library with Trakt.tv. It's not really supported anymore. [As the Trakt Plex Scrobble has become a paid feature for Trakt VIPs](#)

Feel free to try it out if interested. [I have the plugin working with these settings](#)

YMMV though.

The methods to run it are: Plex Trakt Plugin + Kitana for the initial scan

## Plex Guide for Anime

Installing the [Plex Trakt Scrobber Plugin](#), + [Kitana](#). + [Python 3.7](#) + [VC++ 2013 x86](#)  
Or [PlexTraktSync](#) + [Python3.7 - 3.9](#)  
Or [through a third party webhook](#)

It's useful for when using [mdblist](#), as it will hide shows that are already in your library.

## Plex Guide for Anime

The Official Guide by Plex.

Plex, Linux & Docker

[https://old.reddit.com/r/Piracy/comments/ma1hlm/the\\_complete\\_guide\\_to\\_building\\_your\\_own\\_personal/](https://old.reddit.com/r/Piracy/comments/ma1hlm/the_complete_guide_to_building_your_own_personal/)  
If you're into Tux's

Docker Home Media Server

<https://www.smarthomebeginner.com/docker-home-media-server-2018-basic/>  
Focus on building the Plex Media Server with Docker on a Ubuntu Server.

The Ultimate Plex Guide (WIP)

[https://old.reddit.com/r/PleX/comments/m9gt84/the\\_ultimate\\_plex\\_guide\\_part\\_1\\_starting\\_plex\\_with/](https://old.reddit.com/r/PleX/comments/m9gt84/the_ultimate_plex_guide_part_1_starting_plex_with/)  
Another Guide for Plex using Windows

Ultimate server tutorial

<https://www.cuttingcords.com/home/ultimate-server/getting-started>  
It's a bit outdated. Focused on setting up Plex with Usenet instead of torrents.

## Other Plex

Plex Pass

<https://support.plex.tv/articles/200288566-what-is-plex-pass/>  
[Table of Plex Pass Features](#)

Plex pass is awesome. It enables premium features such as; Hardware Acceleration & Skip intro.

Goes on sale a couple times a year. If you can afford it. I'd recommend it.

Plex Apps

<https://www.plex.tv/en-ca/apps-devices/>  
Plex can run off many devices!

### [Plex Speed](#)

Browser extension to force the Plex Client to increase the playback speed.  
In case you plan on watching One Piece.

Filebot

<https://www.filebot.net/> <https://github.com/barry-allen07/FB-Mod/releases>  
Allows for renaming & organizing of titles.  
Newer version requires a license.  
Older versions can be found on Sourceforge. Modded version on Github.

Tautulli

<https://tautulli.com/>

## Plex Guide for Anime

Application to monitor activity with your Plex Media Server.  
Works better if you have friends. Or have a graph fetish

## Discord Plex Rich Presence

<https://github.com/Ombrelin/plex-rich-presence>

A desktop app to enable discord rich presence for your Plex Media Server Activity  
Some combination of re-installing discord, opening plex, opening PRC. Make it work.

## Plex Meta Manager

<https://github.com/meisnate12/Plex-Meta-Manager>

<https://github.com/meisnate12/Plex-Meta-Manager-Configs>

<https://metamanager.wiki/en/latest/home/guides/local.html>

Python script to update metadata information for items in plex as well as automatically build collections and playlists.

## Plex Devices Comparisons

[A Comparison of Direct Playing on Nvidia Shield vs Consoles](#)

[Plex Direct Play GS \(Doesn't include ass/ssa subs\)](#)

[A List of Plex Clients](#)

[NAS Compatibility with Plex](#)

[Another Comparison of Plex Clients \(Incomplete & no subs\)](#)

## Further Automation

### Mdblist

<https://mdblist.com/> <https://old.reddit.com/r/mdblist/> [listrr.pro also does the same thing](#)

Can be used to create a Trakt.tv list to automatically add shows/movies to sonarr/radarr.

Support for multiple rating sites including AniDB,

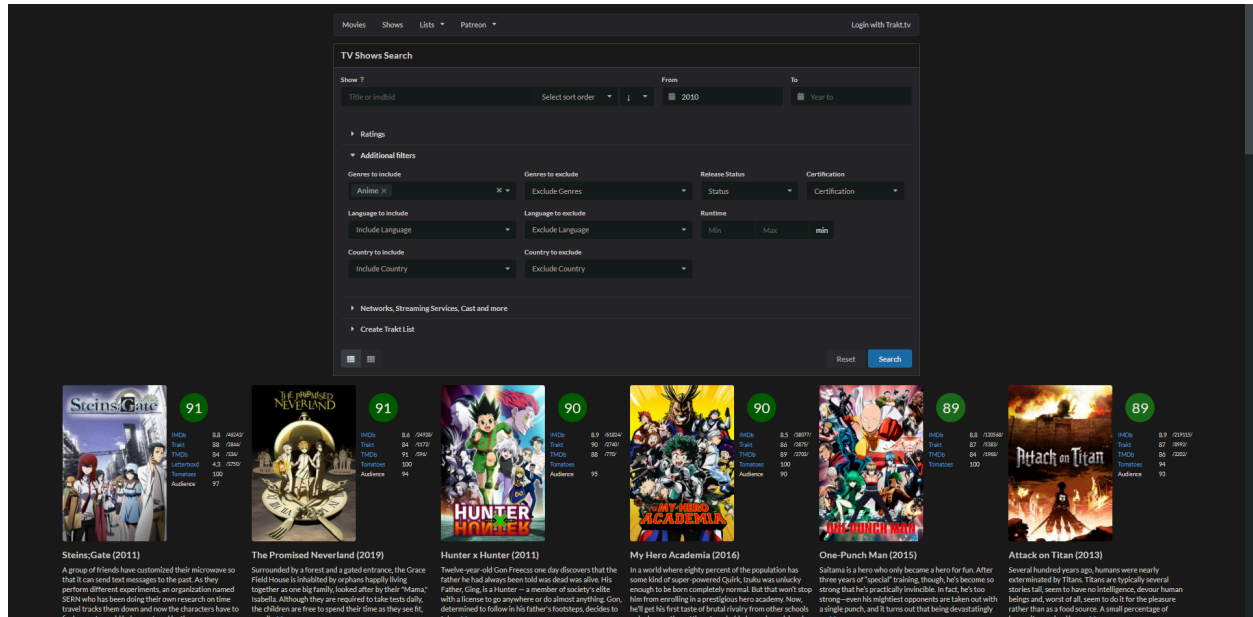

[Brief Instructions](#)

Example Lists: Sp1ti seasonal list

<https://trakt.tv/users/sp1ti/lists/anime-summer-2021?sort=rank.asc>

[Public Trakt.tv Anime Lists](#)

## Plex Guide for Anime

## Ombi

<https://ombi.io/>

[\[TIPS\] Install Ombi as a Service accessible via DNS on Windows 10](#)

Allows users to request content to be added to Plex.

Also requires friends.

## Requestrr

<https://github.com/darkalfx/requestrr>

<https://github.com/darkalfx/requestrr/wiki>

Similar to [Ombi](#). Allows users to request content be added to Plex. Via Discord Chat.

Consider leaving profile tags blank. If using Requestrr. As it'll apply the profiles globally to each show.

## Music

[Plex has support for Music](#)

Headphones / Lidar / SoulSeek can be used for downloading Music

[Headphones](#) deprecated? The search function was cool. Although it never found anything

[Lidarr](#) - Like Sonarr for Music. Still pretty new. But you can pair w/ VGMDb to find Anime Music

[SoulSeek](#) - Fan of lossy rips, leeches and dead chat rooms? Boy do I have a place for you.

[Plexamp - A popular player for Plex Music](#)

Or just pay for spotify.

## Plex Guide for Anime

### [Anibin](#)

Attempts(ed?) to evaluate the resolution of seasonal Anime.

Is he right? Is he wrong? What do these moonrunes mean? Can you even read japanese?

Hey Google....

[GetNative](#) can do the same.

## Communities

That i lurk sometimes...

[/r/Piracy](#) - [Wiki](#) - Seed More  
[/r/AnimePiracy](#) - [Discord](#) - [Wiki](#) - More Seed , Onii-chan  
[/r/DataHoarder](#) - [IRC](#) - [Wiki](#) - How am I supposed to hold all the Linux ISOs?  
[/r/Plex/](#) - [Discord](#) - [Wiki](#) - Name. Your. Fucking. Files/Folders. Correctly. People  
[/r/VPN/](#) - Mr. Worldwide.  
[/r/VPNTorrents/](#) I need a VPN. It's gotta be fast and it's gotta be free.  
[/r/torrents](#) Are we the leechers?  
[/r/trackers/](#) Gotta catch 'em all  
[/r/anime/](#) Oh Yeah, that's why we're here.  
[/a/](#) & [/g/](#) Lurk Moar
