

# Privacy Policy

**App:** Trevio

**Last Updated:** May 25, 2026

## 1. Introduction

Trevio ("we," "us," or "the App") is an iOS utility that helps you save shops and places you plan to visit and record why you want to go. This Privacy Policy explains what information the App handles, how it is used, and your choices. By using Trevio, you agree to this policy.

## 2. Information We Collect

Trevio is designed to work **entirely on your device**. We do not operate user accounts, login servers, or cloud sync for your personal content.

The App may store the following **locally on your iPhone or iPad**:

- **Spot wishlist data** you create: place name, category, mandatory "why I want to go" text, optional neighborhood label, mood, tags, pin status, and timestamps.
- **Photos** you attach to spots (from the camera or photo library), saved as files in the App's private documents area.
- **Voice memos** you optionally record for a spot, saved as audio files on your device.
- **Exported visit card images** generated in the App and a log of those exports (including thumbnails stored locally).
- **App preferences**, such as whether you accepted the Terms and Privacy Policy, your in-app Coin balance, monthly HD export usage counters, and identifiers used only to prevent duplicate crediting of the same App Store purchase.

We do **not** collect your name, email, phone number, precise GPS location, contacts, browsing history, or advertising identifiers through Trevio.

## 3. How We Use Information

Information stored on your device is used only to:

- Display, search, sort, and filter your spot wishlist across the App's tabs (Spotlane, Reasonweft, and Keeploom).
- Play back voice memos you recorded.
- Render and export shareable visit card images, including saving them to your photo library when you choose.
- Manage optional in-app Coin purchases and Coin spending for HD visit card exports after your free monthly allowance.
- Remember your legal consent and basic App settings.

We do **not** use your content for advertising, profiling, or sale to data brokers.

## 4. Data Storage

**All spot data, photos, audio recordings, export files, Coin balance, and related preferences are stored only on your device** in the App's application documents directory and system preferences (SharedPreferences). We do not upload this content to our servers because Trevio has no backend that receives your personal data.

If you delete the App, locally stored data is typically removed with it unless iOS retains backups according to your device settings.

## 5. Third-Party Sharing

**We do not share, sell, rent, or transfer your spot content, photos, voice memos, or export history to any third party.**

Limited interactions with third parties occur only as follows:

- **Apple App Store / StoreKit:** When you buy Coins, payment and purchase validation are handled by Apple under Apple's privacy practices. Trevio stores purchase-related identifiers locally only to credit Coins once per transaction.
- **Legal documents in-app:** Terms of Service and Privacy Policy may open in an in-app browser (WebView) if you tap those links; that loads the URL you or the developer configured for hosting these documents.

Trevio does not integrate third-party analytics, advertising SDKs, or social login providers.

## 6. Device Permissions

Trevio requests access only when needed for features you use:

| Permission           | Purpose                                            |
|----------------------|----------------------------------------------------|
| Camera               | Take a photo of a shop or place for a spot card.   |
| Photo Library (read) | Import an existing image from your library.        |
| Photo Library (add)  | Save an exported visit card image to your library. |

**Microphone**

Record an optional voice memo explaining why you want to visit.

You may deny any permission; the related feature will not work until access is granted in iOS Settings. Denial is shown with a simple in-app message (for example, "No camera permission") without opening system settings automatically.

## 7. In-App Purchases

Trevio offers **consumable Coin packs** through Apple's In-App Purchase system. Coins exist only as a local balance in the App. Apple processes payment; we do not receive your payment card details. Purchase fulfillment records needed to avoid duplicate Coin grants are stored locally on your device.

## 8. Data Security

Because data stays on your device, its security depends largely on your device passcode, Face ID, Touch ID, and iOS protections. We recommend keeping your device updated and locked. Trevio does not transmit your wishlist content over the internet for storage on our servers.

## 9. Children's Privacy

Trevio is not directed at children under 13, and we do not knowingly collect personal information from children. If you believe a child has provided information through the App, contact us at [trevio@gmail.com](mailto:trevio@gmail.com) and we will assist with removal of locally stored data by uninstalling or resetting the App on the device.

## 10. Your Rights and Choices

You can:

- **View and edit** your spots, photos, and voice memos within the App.
- **Delete** individual spots or exported card records, which removes associated local files where applicable.
- **Decline permissions** for camera, photos, or microphone at any time in iOS Settings.
- **Stop using in-app purchases** by not opening the Coin Store.
- **Withdraw consent** to the Terms and Privacy Policy only by discontinuing use and deleting the App; the App requires initial agreement before continued use.

Because we do not hold your data on our servers, access or portability requests are fulfilled by you exporting or copying content from your device (for example, saving visit cards to Photos).

## **11. Changes to This Policy**

We may update this Privacy Policy from time to time. The "Last Updated" date at the top will change when we do. Material changes will be reflected in the hosted version linked from the App. Continued use after an update means you accept the revised policy.
