Features

Automatic user provisioning to Trotto through Okta allows you to:
- Import pre-existing Trotto users from your organization into Okta
- Create new users in Trotto
- Update user attributes in Trotto:
  - userName
  - email
  - givenName
  - familyName
  - displayName
- Deactivate users in Trotto
- Re-activate users in Trotto

Requirements

To use Trotto's Okta integration, you must:

- Have a Trotto Enterprise plan
- Be an administrator for your organization's Trotto account
- Have an existing [Okta account](#)

Configuration Steps

1. Contact the Trotto team

Send an email to help@trot.to requesting an API token for Trotto's SCIM API. In the email, tell us what secure mechanism you would like to use to receive the API token for your organization, such as a public encryption key we can use to encrypt your API token before sending over email, or Keybase.

Once we receive your email, we'll send you an API key using your preferred secure method.

2. Configure automatic provisioning in Okta

Once you've received an API token from the Trotto team,

1. Open the Trotto application in Okta
2. Click the **Provisioning** tab
3. Check **Enable API integration**

4. Enter the provided API token in the **API Token** field
5. Click the **Test API Credentials** button to verify the API connection works
6. Click **Save**

You can now provision and deprovision Trotto users through Okta.
