Keywords *Sanitation, Humanities, Health, Zambia, Japan*

Sanitation refers to a system that hygienically separates humans from harmful excreta and promotes its safe treatment and disposal. The significance of addressing sanitation is articulated in the United Nations' Sustainable Development Goal 6 which states that we should "Ensure availability and sustainable management of water and sanitation for all." We have less than 10 years to reach this 2030 goal, and it seems quite doubtful that we will.
