Quick Reminders

- Quiz logistics:
    - Come to Lutkin on Friday with the Lockdown Browser installed.
    - Quiz will be 50 minutes, administered on Canvas
    - If you have Accommodations and you didn't get an email from me already, email me ASAP so that we can figure something out!
    - Best way to study is to do the practice quizzes
    - Your lowest Quiz score will be dropped
- HW3 due on **Thursday** (tomorrow) @midnight

Your Questions Go Here…

Definitely study: pop and append; positional and keyword arguments

- Operators
    - could you briefly explain % vs // again? I always mix them up
- Lists and tuples how to edit / use them.
    - + Slice functions
    - + The difference between slice/split? (If they are related at all)
    - + Pop function
    - + What actually prints when you print(my_list), as is does it include the [] and "?
    - When would we need to use len()
- Specific questions:
    - Practice quiz 3c question # 9
    - Exercise 2 from the assignments for today
- Functions:
    - + positional vs keyword parameters and parameters vs arguments
    - + Required vs optional arguments
    - + What are type hints?
    - What arguments do we need to include in the indented parts of a composite function (calling other functions within a new, bigger function)?

-
  - \+ Print v. return:
    - When to use print in the function vs when to use return
    - When the return has spaces vs when you need to add a space
  - Variable Scope:
    - Global vs Local and how functions interact with them
