

2024 Girls Build Project Troubleshooting

What should I do?

My Solar Night won't charge!

Charge in ON position in sunlight (i.e. window sill). It will automatically light up in the dark. The On/Off switch is on the circuit board under the battery.

Will a regular battery work?

NO! The solar will try to charge a non-rechargeable battery. The battery might not like it. It could overheat.

If it is still not working, please contact us. Kristi@oseia.org
