FULL-STACK AND GENAI ENGINEER

Product-first engineer building AI-native software and automation systems. Lead developer across a consultancy + product team, and first engineering hire in a venture incubation environment. Known for fast, high-quality shipping and enabling teams via hands-on GenAI workshops.

FOCUS

AI-native product development • Full-stack delivery • GenAI workflows and LLM productization • Automation platforms

Core stack: **Next.js** • **FastAPI**

EXPERIENCE

GRIT — Lead Developer, First Employee | Aug 2025 – Present

- Building 'Launch Pad,' an internal automation platform for venture incubation: repeatable website generation, standardized startup workflows, and reusable product scaffolding.
- Enabling a rapid launch cadence by productizing templates and components that reduce time-to-launch across new concepts.
- Partnering closely with leadership to iterate quickly on desirability and viability experiments across multiple concepts.

SMARTR — AI Engineer | 2024 – Present

- Delivered predictive AI work for Volvo Finance Bank related to lease pricing in a high-standard consulting environment.
- Designed and delivered hands-on GenAI workshops that upgraded how teams build and ship with LLMs (practical patterns, tooling, and 'AI-native' development approaches).
- Supported the Klay product team with GenAI development workshops and applied prototyping.

KLAY — Lead Developer | 2025 – Present

- Lead developer for a Smartr-affiliated product team, owning end-to-end engineering from product requirements to shipped features.
- Building full-stack software and AI-enabled functionality with a focus on maintainability, speed, and real-world usability.

NEARBYSTORE — Frontend Developer, Contract | Mar 2024 – May 2024

- Delivered a Vue-based production frontend in a 3-month engagement, collaborating closely with the team on API integration and UX-critical flows.

NORDWEBB — Founder | 2021 – 2023

- Ran a web development and marketing micro-agency while in upper secondary school, delivering client work end-to-end.
- Built Nordtools, an AI content automation product for SEO: shipped a polished MVP in a 3-month sprint and validated it through demos with leading agencies.

PROJECTS

KLIMATKOMPASSEN UF — CEO, Lead Developer | 2022

- Built a mobile app that uses AI + barcode scanning to guide users through Swedish recycling and sorting.
- Reached 500 active users during the market period; placed 4th regionally among ~800 UF companies; received the Adlerbertska Stiftelserna stipend.

AWARDS

- **Venture Cup (2025)** — Winner (selected as 1 of 20 winners from ~400 applications)
- **Chalmers AI Hackathon at GoWest Nordic VC Forum (2025)** — Winner (final-stage pitch on main stage)
- **Chalmers Quantum Hackathon with IBM + WACQT (2025)** — 3rd Place
3-person team; entered with the least traditional/academic background in the room and still placed

EDUCATION

Upper Secondary Diploma (Gymnasium), Sweden
