

WPE+ Bootable

With Update (26200.8457) - U7-2

(Based on the official ISO version 25H2 with updates.)

Datavults:

[Download](#)

DLsurf (3 Part):

[001](#) / [002](#) / [003](#)

Download all Part, then extract .001 with 7-Zip to get the ISO file.

File Size : 5+GB

Format : 7Zip / ISO

MD5 : 8efbce1d8b690d0e865d71e1a754f18a (7zip)

MD5 : 6a86b40780dee75583b45e6b120a3299 (ISO)

3 Part:

MD5: 583052d429b203f6742bb6b60e58d0a4 (part 001)

MD5: 1f7b750de48e33406aeb37b70d86848a (part 002)

MD5: 8453093cd4f4e2adc9fea6a77b800f24 (part 003)

NOTE: If you are installing from USB, make sure to disable Secure Boot in the BIOS beforehand to avoid boot issues.

NOTE: Do not download from GoShare ads. The official file is always a single direct link and should be 5GB+. Always verify the MD5 hash to ensure it matches before using it.

Extract tools:

7zip - <https://7-zip.org/download.html>
Winrar - <https://www.win-rar.com/download.html?&L=0>

MD5 hash check tools:

X64 - <https://www.nirsoft.net/utils/hashmyfiles-x64.zip>
X86 - <https://www.nirsoft.net/utils/hashmyfiles.zip>

Downloader tools:

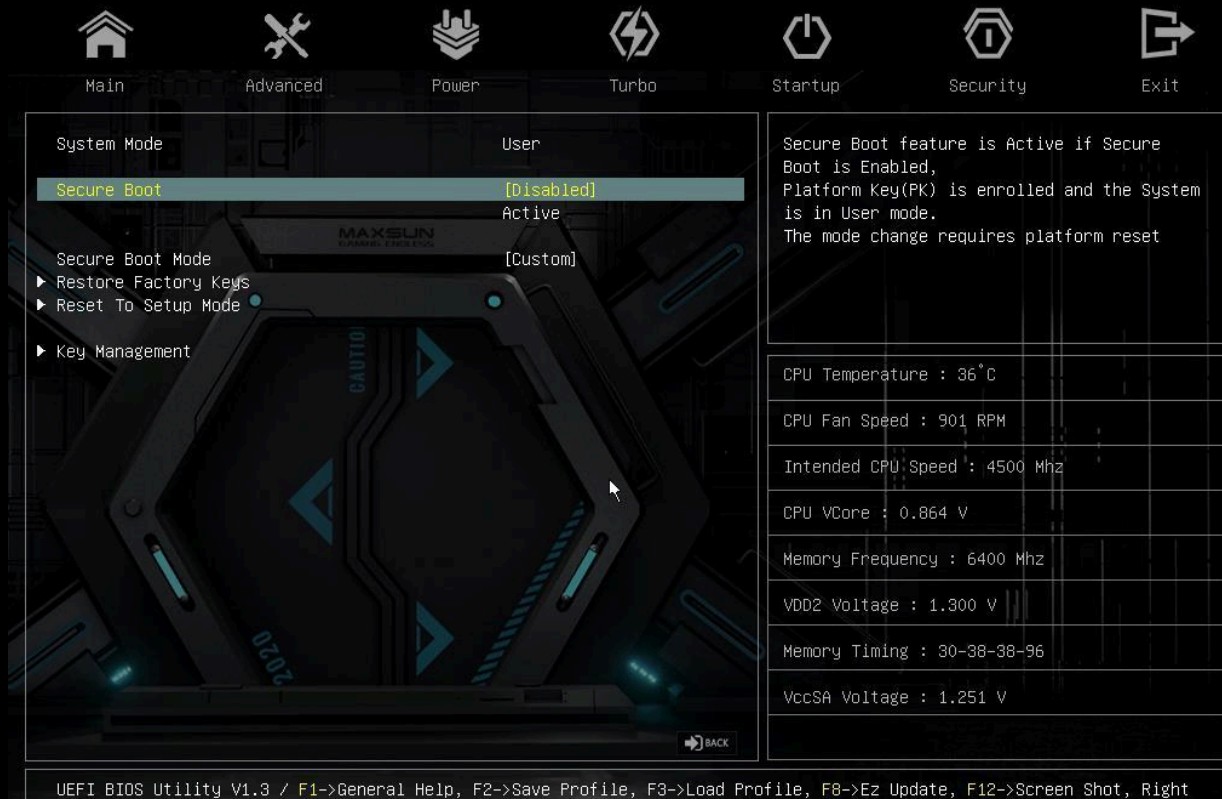

AB - <https://abdownloadmanager.com>
IDM - <https://www.internetdownloadmanager.com/download.html>
IDA - <https://westbyte.com/ida/index.phtml?page=download>
JDownloader2 - <https://jdownloader.org/jdownloader2>
JDownloader2 - **JDownloader2 + Java (Portable)**

- Use any DNS or VPN if your internet is blocked.

Make USB drive bootable with :

Yumi - <https://www.pendrivelinux.com/yumi-multiboot-usb-creator>
Ventoy - <https://www.ventoy.net/en/download.html>
Balena - <https://www.balena.io/etcher>
Rufus - <https://rufus.ie/en/>
Win2USB - <https://www.techspot.com/downloads/6475-wintousb.html>

- If crashing or stuck while installing using USB, can try to disable secure boot & secure boot mode set to custom in Bios.

NOTE: Also without USB drives can setup windows > Right click ISO > mount > open > run setup.exe

NOTE: To upgrade from previous Ghost Spectre win10/11 without losing data, Right click ISO > mount > open > run setup.exe

You need at least **32GB** of free disk space to upgrade, Any 3rd party AV please disable before upgrade.

You need at least **15GB** drive to fresh install in UEFI mode. (recommend use in UEFI mode)

You need at least **15GB** drive to fresh install in Legacy mode.

How to remove **Windows.old** folder after upgrade or fresh install in same partition. <https://youtu.be/LUwRsKACmeY>

- If got stuck on Other Screen try this to Add Account (SUPERLITE OR SE).
