WordPress Development | Theme Customization | Plugin Integration | Content Management

JavaScript Frameworks & Libraries

React.js | jQuery

Version Control & Deployment

Git | GitHub | CLI Tools | Vercel

Tools

VS Code | Postman | Figma | Notion

PROJECTS / WORK EXPERIENCE

AnimeStream

WordPress Theme Development – March 2025 April 2025

Developed AnimeStream, a fully custom WordPress theme designed for anime streaming websites. The theme includes features like anime categorization, episode tracking, user bookmarks, series schedules, and character profiles. It's mobile-responsive, supports dark mode, and offers flexible layout options.

Key Features:

- Anime listing and categorization
- Episode tracking and user bookmarks
- Series scheduling and character details

- Advanced search and multiple layout options
- Mobile-friendly design with dark mode
- Customizable via WordPress Customizer and theme settings

Auto365

WordPress Website using Elementor – March 2025 April 2025

Developed a responsive, SEO-optimized WordPress website using Elementor for Auto365, a platform offering professional auto repair services. The site showcases services, enables online bookings, and features educational blog content to enhance user engagement and visibility.

Key Features:

- Mobile-friendly, modern UI with Elementor
- Service detail pages for diagnostics, brakes, suspension, etc.
- Online appointment booking and contact forms
- Blog integration for SEO and customer education
- Google Maps, WhatsApp, and CTA integration
- Speed and SEO optimization using caching and SEO plugins

Freelance & Custom WordPress Work

WordPress Development & Theme Customization — Ongoing (2023 – Present)

Delivered various small to mid-scale WordPress customization projects for clients across different niches. Focused on tailoring front-end experiences, improving performance, and implementing lightweight plugin-based solutions without altering core structures.

Scope of Work:

- Customized AnimeStream theme layout to replicate the look and feel of **gogoanimes.fi**, modifying only the frontend without changing post types or content structure.
- Modified existing WordPress themes to align with client branding and UX/UX preferences.
- Integrated third-party plugins for SEO, forms, and social media connectivity.
- Resolved layout, responsiveness, and cross-browser compatibility issues.
- Developed custom landing pages using Elementor and Gutenberg.
- Assisted in migrating WordPress sites between hosting providers and optimized page load times.
- Provided maintenance support, backup automation, and security configuration.

Modern Video Player

Custom Video Player (HLS & MP4 Support) – December 2024 January 2025

Developed a feature-rich, customizable video player for modern websites with support for HLS and MP4 formats. Designed for performance, accessibility, and mobile optimization, the player offers a seamless viewing experience across devices.

Key Features:

- Supports HLS and MP4 video formats
- Mobile-friendly with double-tap seek and screen lock feature
- Adaptive quality selection and multiple audio track support
- Multi-language subtitles with advanced customization options
- Picture-in-Picture mode and keyboard shortcut support
- Thumbnail previews, custom poster images, and logo overlay
- Playlist functionality with search and custom skin color options

AsuraComic Drive Image Uploader

WordPress Plugin Development – January 2025

Developed a WordPress plugin that allows users to fetch images from a provided URL and automatically upload them to their connected Google Drive account. The plugin then returns the Google Drive image links, which can be displayed directly on the website, helping users manage media externally and reduce server load.

Key Features:

- Fetches and uploads remote images to the user's Google Drive
- Generates shareable image links for immediate use on WordPress posts
- Integrates with Google Drive API for secure and automated uploads
- Includes plugin settings for managing Google Drive credentials
- Helps offload media storage from the server and improves site performance

IPTV & Movie Streaming Platform

Full-Stack Web Application – December 2024 January 2025

Created a full-featured web application with both a public-facing frontend and a powerful admin dashboard. The platform allows users to stream live TV channels via M3U8 links and browse a curated movie collection, while administrators manage content, metadata, and settings through a secure backend interface.

Key Features:

- Public-facing website for live channel streaming and movie browsing
- M3U8 channel support with logos, names, and category details
- Movie library with detailed metadata, thumbnails, and playback support
- Admin dashboard for managing channels, movies, and content organization
- Search, filter, and category-based navigation for both users and admins
- Responsive UI for seamless experience on mobile and desktop
- Secure architecture with clear separation between frontend and backend

Inventory Management System

Full-Stack Web Application – August 2024 December 2024

Developed a modular, scalable Inventory Management System using **PHP, JavaScript, HTML, and CSS**, focused on efficient inventory tracking, secure user management, and robust data handling. Designed to support role-based access and high levels of customization, the system offers a strong foundation for enterprise inventory control.

Key Features:

- Role-based user access control with dynamic permission assignment
- Token-based authentication with session validation and expiration handling
- Secure handling of sensitive user and inventory data
- Comprehensive inventory tracking with database integration
- Support for creating, updating, and querying inventory records with metadata
- Utility functions for token generation, browser detection, and data sanitization
- File size formatting utility for better data presentation
- Error logging system with timestamps, severity levels, and debug traces
- Import/export capabilities for database schema with predefined SQL scripts
- Modular PHP architecture supporting third-party integrations and future expansion

Anonymous Feedback

Full-Stack Web Application – Feb 2024 Feb 2024

Built a full-stack web application using React, Node.js, Express, MongoDB, and Tailwind CSS that allows users to collect anonymous feedback. Designed for use cases like teachers gathering candid input from students, the platform supports account creation, feedback link generation, and secure, anonymous submission.

Key Features:

- User registration and authentication system
- Anonymous feedback submission without revealing user identity
- Unique feedback links for each account holder

- Clean, responsive UI built with Tailwind CSS
- Secure data handling using Express and MongoDB
- Designed for professionals such as teachers, managers, and team leads

CWS Portfolio

Full-Stack Web Application – Oct 2023 Feb 2024

A dynamic portfolio website for creatives (designers, marketers, etc.) to showcase their work and manage content.

Key Features:

- Customizable hero section with user-focused segments for skills, services, and testimonials
 - Light/Dark mode toggle with flexible design system for typography and brand colors
 - Integrated chatbot and comment system (WhatsApp Business, Crip Chat, Tidio)
 - Media management for images, SVGs, audio, video, and documents
 - Content management for posts, projects, blogs, and pages with category support
-
